

Software ergonomics for multimedia user interfaces —

Part 2: Multimedia navigation and control

The European Standard EN ISO 14915-2:2003 has the status of a
British Standard

ICS 13.180; 35.200

National foreword

This British Standard is the official English language version of EN ISO 14915-2:2003. It is identical with ISO 14915-2:2003.

The UK participation in its preparation was entrusted by Technical Committee PH/9, Applied ergonomics, to Subcommittee PH/9/6, User system interfaces, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN ISO title page, the EN ISO foreword page, the ISO title page, pages ii to vii, a blank page, pages 1 to 33, the Annex ZA page, an inside back cover and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

English version

Software ergonomics for multimedia user interfaces - Part 2:
Multimedia navigation and control (ISO 14915-2:2003)

Ergonomie des logiciels pour les interfaces utilisateur
multimédias - Partie 2: Navigation et contrôle multimédias
(ISO 14915-2:2003)

Software-Ergonomie für Multimedia-Benutzerschnittstellen
- Teil 2: Multimedia-Navigation und Steuerung (ISO 14915-
2:2003)

This European Standard was approved by CEN on 10 July 2003.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

CORRECTED 2003-09-24

Foreword

This document (EN ISO 14915-2:2003) has been prepared by Technical Committee ISO/TC 159 "Ergonomics" in collaboration with Technical Committee CEN/TC 122 "Ergonomics", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2004, and conflicting national standards shall be withdrawn at the latest by January 2004.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

Endorsement notice

The text of ISO 14915-2:2003 has been approved by CEN as EN ISO 14915-2:2003 without any modifications.

NOTE Normative references to International Standards are listed in Annex ZA (normative).

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 14915-2 was prepared by Technical Committee ISO/TC 159, *Ergonomics*, Subcommittee SC 4, *Ergonomics of human-system interaction*.

ISO 14915 consists of the following parts, under the general title *Software ergonomics for multimedia user interfaces*:

- *Part 1: Design principles and framework*
- *Part 2: Multimedia navigation and control*
- *Part 3: Media selection and combination*

Introduction

This part of ISO 14915 applies to both the presentation of content and interaction techniques for user control of computer-based multimedia applications in general, including stand-alone and networked-delivered applications. These applications can vary in size and complexity (e.g. a single web page, a catalogue or an interactive simulation).

This part of ISO 14915 provides specific guidance related to multimedia navigation and control that relates to the three aspects inherent in designing multimedia user interfaces identified in ISO 14915-1:

- content design;
- interaction design;
- media design.

Content design is based on the cognitive needs of the various different users and the different tasks involved in an application. Content design also takes into account various approaches to organize the content to provide support for different methods of exploring the content.

Interaction design focuses on the presentation of this content to users and the methods that will be provided to users for them to interact with this content.

Media design focuses on making use of particular media objects to implement the content and interaction designs.

This part of ISO 14915 is concerned with the navigation between, and control of, various media objects, presentation segments, and content chunks. Specific guidance on media design is provided in ISO 14915-3.

Software ergonomics for multimedia user interfaces —

Part 2: Multimedia navigation and control

1 Scope

This part of ISO 14915 provides recommendations and requirements for the design of multimedia user interfaces with respect to the following aspects: design of the organization of the content, navigation and media-control issues. This part of ISO 14915 is limited to the design of the organization of the content and does not deal with the design of the content in general. Design issues within a single medium (e.g. the lighting of a film sequence) are only addressed with respect to the ergonomic issues related to user controls.

This part of ISO 14915 provides

- a framework for the structuring of multimedia applications,
- information and recommendations on the design of navigation structures and navigation mechanisms for use within multimedia applications, and
- information and recommendations on the design of controls for use within multimedia applications.

It does not specifically address entertainment applications, although some recommendations can also be applicable to that domain.

ISO 14915 does not address implementation issues. The ergonomic requirements can be realised through very different mechanisms, e.g. the delivery system, a scripting language or the application.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 14915-1 and the following apply.

3.1

content chunk

unit of content that satisfies a requirement of a specific task for a specific user

NOTE 1 A content chunk can also meet other requirements of one or more tasks for one or more users, either by itself or in combination with other content chunks.

NOTE 2 A content chunk defines a subtopic that justifies separate consideration by the user. However, designers may decide whether or not to present one or more content chunks together within a single presentation segment.

EXAMPLE A research report is divided into five content chunks that deal with: background information, methodology, results, conclusions, and recommendations.

3.2

presentation segment

unit of design which consists of one or more content chunks which together present part of an application

EXAMPLE A Web page is used to present information about some topic.

3.3

media object

component of a multimedia application that is implemented by a single media type

EXAMPLE 1 A text object presenting a discussion about some topic.

EXAMPLE 2 An image object presenting a picture of some person.

EXAMPLE 3 A sound object presenting a song.

3.3.1

composite media object

either a single media object that is used on its own or a combination of media objects which are used together and presented synchronized with one another and/or automatically linked to one another

NOTE Some objects, such as movies, may naturally contain multiple media.

EXAMPLE 1 A moving image object and a sound object are to be played in synchronization with each other and with a single set of play, pause, and stop controls to effect the playing of both.

EXAMPLE 2 A series of songs are played one after another with a single set of play, pause, and stop controls to effect the playing of the entire series.

3.4

navigation techniques

different techniques of implementing navigation which can include: automatic, predetermined, user determined or adaptive determined

NOTE A combination of these navigation techniques can be used in different parts of a multimedia system.

3.4.1

automatic navigation

navigation where content is presented by the system without user's input

EXAMPLE Audio is presented automatically along with video.

3.4.2**predetermined navigation**

navigation where the user has only one choice of where to go next, but where the user has control over when to go to this next content

EXAMPLE Upon answering question 2 in a quiz, the user is sent to question 3.

3.4.3**user-determined navigation**

navigation where the user can choose which content to go to next from a number of options

EXAMPLE The user selects between going into further details in a topic and going on to the next topic.

3.4.4**adaptive determined navigation**

navigation where the choices available are determined by the system based on the content and some combination of: an individual's history, an individual's personal characteristics, a group's social history, and/or a group's characteristics

EXAMPLE The system limits the choices presented based on a profile of the user's interests.

3.5**content structure**

⟨multimedia applications⟩ composed of a number of content chunks that are related together in one or more logical manners

3.6**navigation structure**

⟨multimedia application⟩ composed of a number of media objects, presentation segments, and navigation techniques that allow a user to move between related media objects and presentation segments

3.7**basic structures**

structures used as the basis for creating all other structures

NOTE The three basic structures are linear structures, tree structures, and network structures.

3.7.1**linear structures**

structures that organize their elements in a sequence

NOTE 1 Linear structures may include sequences where media objects are presented in parallel.

NOTE 2 An example of a linear structure of content chunks or presentation segments is illustrated in Figure 1.

Figure 1 — Example of a linear structure

3.7.2**tree structures**

structures that organize their elements in a hierarchical manner, where each component is associated with only one higher-level component and may be associated with multiple lower-level components

NOTE An example of a tree structure of content chunks or presentation segments is illustrated in Figure 2.
