Foreword

This British Standard, having been prepared under the direction of the Aerospace Standards Committee, specifies requirements for pressure transducers for use in aircraft pressure systems. The standard embraces gauge, absolute and differential pressure units.

Pressure transducers produced in accordance with this standard have to be compatible with individual aircraft pressure systems specified by the aircraft manufacturer or the aircraft operator. For each application, the transducer manufacturer produces an individual transducer specification which is called up in the appropriate clauses of this standard.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 6, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
