

BSI Standards Publication

Specification for the testing of balanced and coaxial information technology cabling

Part 1-1: Additional requirements for the measurement of transverse conversion loss and equal level transverse conversion transfer loss

National foreword

This British Standard is the UK implementation of IEC 61935-1-1:2019.

The UK participation in its preparation was entrusted to Technical Committee EPL/46, Cables, wires and waveguides, radio frequency connectors and accessories for communication and signalling.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

CONTENTS

FOREWORD.....	3
INTRODUCTION.....	5
1 Scope.....	6
2 Normative references	6
3 Terms definitions and acronyms	6
3.1 Terms and definitions.....	6
3.2 Acronyms.....	7
4 Reference measurement procedures	7
4.1 Cabling configurations	7
4.2 Transverse conversion loss.....	7
4.3 Equal level transverse conversion transfer loss.....	7
5 Field test measurement requirements for TCL and ELTCTL	7
5.1 General.....	7
5.2 Field test parameters	7
5.3 Data reporting and accuracy	7
5.3.1 General	7
5.3.2 Detailed results	7
5.3.3 Summary results.....	8
6 Field tester measurement accuracy requirements	8
6.1 General.....	8
6.2 Comparison methods to reference procedures	9
6.3 Accuracy performance requirements for level V field testers	9
6.4 Procedures for determining field tester parameters	10
6.4.1 Residual TCL of the tester (E_{RTCL}).....	10
6.4.2 Residual TCTL of the tester (E_{RTCTL}).....	10
6.4.3 TCL random noise floor of the tester (E_{RTCL})	11
6.4.4 TCTL random noise floor of the tester (E_{RTCTL})	11
Annex A (informative) Error models	12
A.1 Error model for the TCL measurement function	12
A.2 Error model for the ELTCTL measurement function.....	12
Figure 1 – Diagram of the measurement of residual TCL.....	10
Figure 2 – Diagram of the measurement of residual TCTL	11
Table 1 – Summary reporting requirements for field test equipment	8
Table 2 – Summary of TCL and ELTCTL accuracy for level V testers.....	8
Table 3 – Informative summary of TCL and ELTCTL accuracy values for level V testers	9
Table 4 – Summary of tester requirements for TCL measurements	9
Table 5 – Summary of tester requirements for ELTCTL measurements	10

**SPECIFICATION FOR THE TESTING OF BALANCED
AND COAXIAL INFORMATION TECHNOLOGY CABLING –****Part 1-1: Additional requirements for the measurement of transverse
conversion loss and equal level transverse conversion transfer loss**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61935-1-1 has been prepared by IEC technical committee 46: Cables, wires, waveguides, RF connectors, RF and microwave passive components and accessories.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
46/724/FDIS	46/729/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.
