National foreword

This British Standard reproduces verbatim ISO 11408:1999 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee STI/38, Chemical conversion coatings, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, page ii and iii, a blank page, pages 1 to 7 and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

This British Standard, having been prepared under the direction of the Sector Committee for Materials and Chemicals, was published under the authority of the Standards Committee and comes into effect on 15 November 1999

Chemical conversion coatings — Black oxide coating on iron and steel — Specification and test methods

*Couches de conversion chimique — Finition noire de la fonte et de l'acier —
Spécifications et méthodes d'essai*

Contents	Page
1 Scope	1
2 Normative references	1
3 Term and definition	1
4 Information to be supplied by the purchaser to the supplier.....	2
4.1 Essential information	2
4.2 Additional information	2
5 Substrate	2
6 Heat treatment of steels	2
6.1 General.....	2
6.2 Heat treatment before black oxidizing.....	3
6.3 Heat treatment after black oxidizing	3
7 Requirements	3
7.1 Appearance and surface quality	3
7.2 Oxalic acid test resistance.....	3
7.3 Resistance of austenitic stainless steels to neutral salt spray.....	3
8 Sampling.....	3
Annex A (informative) Processing procedures for iron and stainless steels.....	6
Annex B (informative) Methods of test for neutral surface reaction and for porosity and continuity.....	7

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11408 was prepared by Technical Committee ISO/TC 107, *Metallic and other inorganic coatings*, subcommittee SC 8, *Chemical conversion coatings*.

Annexes A and B of this International Standard are for information only.
