National foreword

This British Standard reproduces verbatim ISO 13311:1997 and implements it as the UK national standard.

The UK participation in its preparation was entrusted by Technical Committee ISE/58, Iron ores, to Subcommittee ISE/58/2, Analysis of iron ores, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ISO title page, pages ii to iv, pages 1 to 8 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Engineering Sector Board, was published under the authority of the Standards Board and comes into effect on 15 October 1997

Iron ores — Determination of lead content — Flame atomic absorption spectrometric method

*Minerais de fer — Dosage du plomb — Méthode par spectrométrie
d'absorption atomique dans la flamme*

Contents

	Page
Foreword	iii
1 Scope	1
2 Normative references	1
3 Principle	1
4 Reagents	1
5 Apparatus	2
6 Sampling and samples	2
6.1 Laboratory sample	2
6.2 Preparation of predried test samples	2
7 Procedure	2
7.1 Number of determinations	2
7.2 Test portion	2
7.3 Blank test and check test	2
7.4 Determination	3
7.4.1 Decomposition of the test portion	3
7.4.2 Treatment of residue	3
7.4.3 Treatment of combined filtrate and washings	3
7.4.4 Preparation of the set of lead calibration solutions	4
7.4.5 Adjustment of atomic absorption spectrometer	4
7.4.6 Atomic absorption measurements	4
8 Expression of results	4
8.1 Calculation of lead content	4
8.2 General treatment of results	4
8.2.1 Repeatability and permissible tolerance	4
8.2.2 Determination of analytical result	5
8.2.3 Between-laboratories precision	5
8.2.4 Check for trueness	5
8.2.5 Calculation of final result	6
8.3 Oxide factor	6
9 Test report	6
Annex A (normative) Flowsheet of the procedure for the acceptance of analytical values for test samples	7
Annex B (informative) Derivation of repeatability and permissible tolerance equations	7
Annex C (informative) Precision data obtained by international analytical trials	8
Figure C.1 — Least-squares fit of precision against X for lead	8
Table 1 — Dilution guide for test solution	3
Table 2 — Calibration solutions	4
Table B.1 — Lead content of test samples	7

Descriptors: Minerals and ores, metalliferous minerals, iron ores, chemical analysis, determination of content, lead, atomic absorption spectrometric method.
