

Iron ores — Determination of potassium — Flame atomic absorption spectrometric method

ICS 73.060.10

National foreword

This British Standard reproduces verbatim ISO 13312:2006 and implements it as the UK national standard. It supersedes BS ISO 13312:1997 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/58, Iron ores, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to iv, pages 1 to 12, an inside back cover and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 June 2006

Iron ores — Determination of potassium — Flame atomic absorption spectrometric method

*Minerais de fer — Dosage du potassium — Méthode par spectrométrie
d'absorption atomique dans la flamme*

Contents

Page

Foreword.....	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions.....	1
4 Principle.....	1
5 Reagents	2
6 Apparatus	2
7 Sampling and samples	4
7.1 Laboratory sample.....	4
7.2 Preparation of predried test samples	4
8 Procedure	4
8.1 Number of determinations	4
8.2 Test portion	4
8.3 Blank test and check test.....	4
8.4 Determination	5
8.4.1 Decomposition of the test portion	5
8.4.2 Treatment of the solution.....	5
8.4.3 Preparation of the set of calibration solutions	5
8.4.4 Adjustment of atomic absorption spectrometer	6
8.4.5 Atomic absorption measurements.....	6
9 Expression of results	6
9.1 Calculation of mass fraction of potassium	6
9.2 General treatment of results.....	7
9.2.1 Repeatability and permissible tolerance	7
9.2.2 Determination of analytical result.....	7
9.2.3 Between-laboratories precision	7
9.2.4 Check for trueness	8
9.2.5 Calculation of final result.....	8
9.3 Oxide factor	9
10 Test report	9
Annex A (normative) Flowsheet of the procedure for the acceptance of analytical values for test samples.....	10
Annex B (informative) Derivation of repeatability and permissible tolerance equations	11
Annex C (informative) Precision data obtained by international analytical trials	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 13312 was prepared by Technical Committee ISO/TC 102, *Iron ore and direct reduced iron*, Subcommittee SC 2, *Chemical analysis*.

This second edition cancels and replaces the first edition (ISO 13312:1997), which has been technically revised. It has been updated to alter the manner in which precision data are presented.
