National foreword

This British Standard reproduces verbatim ISO 13653:1996 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee CPW/172, Optics and optical instruments, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to iv, pages 1 to 12 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Consumer Products and Services Sector Board, was published under the authority of the Standards Board and comes into effect on 15 April 1997

Contents

	Page
Foreword	iii
Introduction	1
1 Scope	1
2 Quantities, symbols and units	1
3 Definitions	2
4 Designation	2
5 Description of measurement procedures	2
6 Measurement of relative irradiance	4
7 Measurement of radiant power	6
8 Presentation of results	7
9 Test report	8
10 Examples	9
Figure 1 — Arrangement for measurement procedure A1 for relative irradiance measurement	10
Figure 2 — Arrangement for measurement procedure A2 for measuring the relative irradiance of objects with infinite image distance	10
Figure 3 — Arrangement for measurement procedure B for measuring the relative radiant power	11
Figure 4 — Graphic representation of relative irradiance as a function of image height for different aperture settings for a rotationally symmetric system	11
Figure 5 — Curves of equal relative irradiance (50 %, 30 % and 10 %) with circular image field	12
Table 1 — Quantities, symbols and units	1
Table 2 — Symbols for the measurement procedures	2
Table 3 — Survey of the application of measuring procedures and presentation of results	8
Table 4 — Relative irradiance as a function of stop value	9

Descriptors: Optics, optical equipment, tests, optical tests, determination, irradiation, optical measurements.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13653 was prepared by Technical Committee ISO/TC 172, *Optics and optical instruments*, Subcommittee SC 1, *Fundamental standards*.
