National foreword

This British Standard reproduces verbatim ISO 13752:1998 and implements it as the UK national standard.

The UK participation in its preparation was entrusted by Technical Committee EH/2, Air quality, to Subcommittee EH/2/4, General aspects, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ISO title page, pages ii to iv, pages 1 to 12 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Health and Environment Sector Board, was published under the authority of the Standards Board and comes into effect on 15 June 1998

Contents

	Page
Foreword	iii
Introduction	1
1 Scope	1
2 Normative references	1
3 Symbols and abbreviated terms	1
4 Principle	2
5 Requirements	3
6 Parallel measurements	4
7 Graphical analysis of dispersion	4
8 Estimation of coefficients of regression model	4
9 Estimation of measurement uncertainty	7
Annex A (informative) Template of spreadsheet to calculate regression and variance function	8
Annex B (informative) Example of spreadsheet to calculate regression and variance function	10
Annex C (informative) Bibliography	12
Figure 1 — Flow scheme of maximum likelihood regression	3
Figure B.1 — Example of window Solver Parameters	10
Table A.1 — Formulae of the blank spreadsheet form	8
Table A.2 — Text blank spreadsheet form	9
Table B.1 — Spreadsheet example	11

Descriptors: Air, quality, air pollution, tests, field tests, measuring techniques, estimation, measurement uncertainty, rules of calculation.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 13752 was prepared by Technical Committee ISO/TC 146, *Air quality*, Subcommittee SC 4, *General aspects*.

Annex A, Annex B and Annex C of this International Standard are for information only.
