

Optics and optical instruments — Test methods for telescopic systems —

Part 5: Test methods for transmittance

ICS 37.020

National foreword

This British Standard is the UK implementation of ISO 14490-5:2005+A1:2015. It supersedes BS ISO 14490-5:2005, which is withdrawn.

The start and finish of text introduced or altered by amendment is indicated in the text by tags. Tags indicating changes to ISO text carry the number of the ISO amendment. For example, text altered by ISO amendment 1 is indicated by **A1** **A1**.

The UK participation in its preparation was entrusted to Technical Committee CPW/172, Optics and Photonics.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 12 January 2006

Foreword.....	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Test arrangement.....	2
5.1 General.....	2
5.2 Source of radiation and condenser	2
5.3 Monochromator or set of filters	2
5.4 Collimator	3
5.5 Aperture stop	3
5.6 Specimen mounting.....	3
5.7 Veiling glare stop	3
5.8 Integrating sphere.....	3
5.9 Radiation detector	3
6 Procedure	3
6.1 Preparation of the test assembly	3
6.2 Determination of the measurement values	4
6.3 Further test methods	4
7 Precision of the measurement	4
8 Presentation of the results	4
9 Analysis	5
9.1 Effective transmittance for photopic vision.....	5
9.2 Effective transmittance for scotopic vision	5
10 Test report	5
Annex A (informative) Calibration procedure for the photoreceiver/measuring instrument	6
Annex B (informative) Trichromatic coefficients and colour contribution index	9
Bibliography	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 14490-5 was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 4, *Telescopic systems*.

ISO 14490 consists of the following parts, under the general title *Optics and optical instruments — Test methods for telescopic systems*:

- *Part 1: Test methods for basic characteristics*
- *Part 2: Test methods for binocular systems*
- *Part 3: Test methods for telescopic sights*
- *Part 4: Test methods for astronomical telescopes*
- *Part 5: Test methods for transmittance*
- *Part 6: Test methods for veiling glare index*
- *Part 7: Test methods for limit of resolution*

The following part is under preparation:

- *Part 8: Test methods for night-vision devices*
