

BSI Standards Publication

Irrigation equipment — Irrigation sprinklers

Part 4: Test methods for durability

National foreword

This British Standard is the UK implementation of [ISO 15886-4:2019](#).

The UK participation in its preparation was entrusted to Technical Committee AGE/30, Irrigation and drainage equipment.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Installation of sprinklers under test	3
5 Measurements	3
5.1 Accuracy of measurements	3
5.2 Pressure measurement	4
6 Test conditions	4
7 Tests to be performed before durability test	4
7.1 Resistance to hydrostatic pressure at ambient temperature	4
7.1.1 General	4
7.1.2 Metal sprinklers	4
7.1.3 Plastic sprinklers	5
7.1.4 Requirements	5
7.2 Water tightness	5
7.3 Flow rate as a function of inlet pressure	5
7.3.1 General	5
7.3.2 Test method	5
7.3.3 Non-regulated sprinklers	5
7.3.4 Regulated sprinklers	6
7.4 Trajectory height	6
7.5 Radius of throw and water distribution curve	6
7.5.2 Radius of throw	6
7.5.3 Distribution curve	7
7.6 Uniformity of rotation (for rotating sprinklers intended to rotate in a uniform manner)	8
8 Operating time of durability test	8
9 Examination of sprinkler after durability test	8
9.1 General	8
9.2 Construction of sprinkler and its parts	8
9.3 Resistance to hydrostatic pressure at ambient temperature	8
9.4 Flow rate as a function of inlet pressure	8
9.5 Trajectory height	9
9.6 Radius of throw water and distribution curve	9
9.7 Uniformity of rotation	9
9.8 Distribution characteristics	9
Bibliography	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 18, *Irrigation and drainage equipment and systems*.

A list of all parts in the [ISO 15886](#) series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
