

BSI Standards Publication

Rubber — Identification of polymers — Pyrolytic gas-chromatographic method using mass-spectrometric detection

National foreword

This British Standard is the UK implementation of ISO 17257:2020. It supersedes BS ISO 17257:2013, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PRI/22, Testing and analysis of rubber.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 29 February 2020.

Amendments/corrigenda issued since publication

Date	Text affected
------	---------------

**Rubber — Identification of polymers
— Pyrolytic gas-chromatographic
method using mass-spectrometric
detection**

*Caoutchouc — Identification des polymères — Méthode par
pyrolyse et chromatographie en phase gazeuse avec détection par
spectrométrie de masse*

Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 List of rubbers	1
4.1 Group M	1
4.1.1 Chloropolyethylene (CM)	1
4.1.2 Chlorosulfonylpolyethylene (CSM)	1
4.1.3 Ethylene-propylene copolymer (EPM) and Ethylene-propylene-diene terpolymer (EPDM)	1
4.1.4 Fluorocarbon rubber having substituent fluoro, perfluoroalkyl, or perfluoroalkoxy groups on the polymer chain (FKM)	2
4.2 Group O	2
4.2.1 Homopolymer of epichlorhydrin (CO), copolymer of epichlorhydrin-ethylene oxide (ECO), terpolymer of epichlorhydrin-ethylene oxide-allyl glycidyl ether (GECO)	2
4.3 Group Q	2
4.3.1 Polysiloxanes (MQ, VMQ, PVMQ)	2
4.4 Group R	2
4.4.1 Butadiene rubber (BR)	2
4.4.2 Chloroprene rubber (CR)	2
4.4.3 Isobutene-isoprene rubber (IIR), chlorinated IIR (CIIR) and brominated IIR (BIIR)	2
4.4.4 Natural rubber (NR) and synthetic isoprene rubber (IR)	2
4.4.5 Acrylonitrile-butadiene rubber (NBR), hydrogenated NBR (HNBR) and carboxylated NBR (XNBR)	2
4.4.6 Styrene-butadiene rubber (SBR)	2
4.5 Rubber blends	2
5 Principle	2
6 Reagents	3
7 Equipment	3
8 Operating conditions	4
8.1 General	4
8.2 Gas chromatograph adjustment	4
8.3 Extraction	4
8.4 Test portion	4
8.5 Pyrolysis	4
9 Interpretation of results	4
9.1 General	4
9.2 Group M	5
9.2.1 Chloropolyethylene (CM) and chlorosulfonylpolyethylene (CSM)	5
9.2.2 Ethylene-propylene copolymer (EPM) and Ethylene-propylene-diene terpolymer (EPDM)	5
9.2.3 Fluorocarbon rubber having substituent fluoro, perfluoroalkyl, or perfluoroalkoxy groups on the polymer chain (FKM)	5
9.3 Group O	5
9.3.1 Homopolymer of epichlorhydrin (CO), copolymer of epichlorhydrin-ethylene oxide (ECO), terpolymer of epichlorhydrin-ethylene oxide-allyl glycidyl ether (GECO)	5
9.4 Group Q	5
9.4.1 Polysiloxanes (MQ, VMQ, PVMQ)	5

9.5	Group R.....	5
9.5.1	Butadiene rubber (BR).....	5
9.5.2	Chloroprene rubber (CR).....	6
9.5.3	Isobutene-isoprene rubber (IIR), chlorinated IIR (CIIR) and brominated IIR (BIIR).....	6
9.5.4	Natural rubber (NR) or synthetic isoprene rubber (IR).....	6
9.5.5	Acrylonitrile-butadiene rubber (NBR), hydrogenated NBR (HNBR) and carboxylated NBR (XNBR).....	6
9.5.6	Styrene-butadiene rubber (SBR).....	6
10	Test report.....	6
	Annex A (informative) Schematic diagram of the chromatographic equipment.....	8
	Annex B (informative) Examples of operating conditions.....	9
	Annex C (informative) Chromatogram examples.....	10
	Annex D (informative) Chemical compounds identified in rubber pyrolysates.....	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Testing and analysis*.

This second edition cancels and replaces the first edition (ISO 17257:2013), of which it consists a minor revision to correct a grammatical error in the Scope.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
