National foreword

This British Standard is the UK implementation of ISO 17280:2015.

The UK participation in its preparation was entrusted to Technical Committee CII/34, Methods of test for surface active agents.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword	iv
1 Scope	1
2 Normative references	1
3 Principle	1
4 Reagents	1
4.1 1,4-Dioxane, purity 99,5 % minimum	1
4.2 4-Methyl-1,3-dioxane, purity 98 % minimum	1
4.3 N, N-dimethylformamide (DMF)	1
4.4 Carrier gas: nitrogen or helium, purity 99,99 % minimum	2
5 Apparatus	2
5.1 Analytical balance, 0,1 mg readability	2
5.2 Gas chromatography system, attached with temperature programmed device and flame ionization detector (FID)	2
5.3 Head space sampling unit	2
5.4 20 ml crimped top glass vials, sealing pliers and sealing clamp suitable for head space unit	2
5.5 Septum and crimped tops, lined with aluminium or PTFE, for closing the vials	2
5.6 Sealing pliers, for the vials	2
5.7 Capillary column, capable of the separation characteristics shown in Figure 2	2
5.8 Volumetric flasks, 50 ml and 100 ml capacity	2
5.9 Gas tight syringes or glass pipettes, 1 ml ± 0,01 ml capacity	2
6 Preparation of calibration solutions	2
6.1 Calibration solution A	2
6.2 Calibration solution B	3
7 Procedure	3
7.1 Preparation of the test sample	3
7.2 Standard addition procedure	3
7.2.1 Preparation of test sample solutions	3
7.2.2 Determination	4
7.2.3 Expression of results	4
7.3 Relative response factor procedure	4
7.3.1 Determination of relative response factor	4
7.3.2 Preparation of test sample solutions	5
7.3.3 Determination	5
7.3.4 Expression of results	5
8 Chromatographic conditions	5
9 Evaluation	6
9.1 General	6
9.2 Identification	7
9.3 Calculation	7
10 Precision	7
10.1 Repeatability limit	7
10.2 Reproducibility limit	7
11 Test report	7
Annex A (informative) Statistical data from the ring carried out	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/TC 91, *Surface active agents*.
