

Steel — Ultrasonic testing for steel flat products of thickness equal to or greater than 6 mm

ICS 77.040.20; 77.140.050

National foreword

This British Standard was published by BSI. It is the UK implementation of ISO 17577:2006.

The UK participation in its preparation was entrusted to Technical Committee ISE/72, Methods of physical and metallographic testing.

A list of organizations represented on ISE/72 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 October 2006

Foreword.....	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions.....	1
4 Principle	2
5 Personnel.....	2
6 Testing system	3
6.1 General requirements.....	3
6.2 Manual-testing instrument	3
6.3 Automated testing system	3
6.4 Performance of electronic equipment	4
6.5 Probes	4
6.6 Coupling medium.....	5
7 Procedure	5
7.1 Inspection timing	5
7.2 Scanning plan	5
7.2.1 General.....	5
7.2.2 Testing of the flat-product body.....	5
7.2.3 Testing of the edges of the flat products	6
7.3 Scanning condition.....	6
7.4 Sensitivity and range setting	6
8 Determination of the discontinuity size.....	8
8.1 Testing the flat-product body	8
8.1.1 Testing with dual-element probes.....	8
8.1.2 Testing with single-element probes.....	8
8.2 Testing the edges	8
9 Acceptance criteria.....	9
10 Test report	9
Bibliography	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 17577 was prepared by Technical Committee ISO/TC 17, *Steel*, Subcommittee SC 7, *Methods of testing (other than mechanical tests and chemical analysis)*.
