

BSI Standards Publication

Internal combustion engines — Piston pins

Part 2: Inspection measuring principles

National foreword

This British Standard is the UK implementation of ISO 18669-2:2025. It supersedes BS ISO 18669-2:2020, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MCE/22, Engines for road vehicles.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Measurement principles	4
4.1 General measuring conditions	4
4.2 Characteristics and measurement principles	4
4.2.1 Outside diameter, d_1	4
4.2.2 Cylindricity of the outside diameter, d_1	5
4.2.3 Circularity of the outside diameter, d_1	5
4.2.4 Circumferential waviness	5
4.2.5 Edge drop-off, b, c	6
4.2.6 Inside diameter, d_2, d_4	6
4.2.7 Concentricity of inside diameter (ID) relative to outside diameter (OD)	6
4.2.8 Length, l_1	6
4.2.9 Gauge length, l_5	7
4.2.10 Runout of the end faces, s	7
4.2.11 End face concavity, h_1 , and end face step, h_2	7
4.2.12 End face diameter, d_6	8
4.2.13 Outside-edge profile	8
4.2.14 Inside chamfer, t_1	8
4.2.15 Tapered bore diameter, d_3	8
4.2.16 Tapered bore angle, α	8
4.2.17 Runout tapered bore, e	8
4.2.18 Roughness	9
4.2.19 Carburised and nitrided case depth	9
4.2.20 Core hardness	9
4.2.21 Peripheral surface hardness	10
4.2.22 Volume change	10
4.2.23 Material defects	10
4.2.24 Residual magnetism	12
4.2.25 Visual defects	12
4.2.26 Grinder burn	12
4.2.27 Streaks on bore surface	12
Bibliography	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 34, *Propulsion, powertrain and powertrain fluids*.

This third edition cancels and replaces the second edition (ISO 18669-2:2020), which has been technically revised.

The main changes are as follows:

- the reference for material defects by eddy current inspection has been updated to align with ISO 18669-1.

A list of all parts in the ISO 18669 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
