

Rubber — Guide to the calibration of test equipment

ICS 83.060

National foreword

This British Standard is the UK implementation of ISO 18899:2004. It supersedes BS 7825-2:1996 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PRI/20, Accuracy of rubber and plastics test equipment.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 1 July 2004

Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principles of calibration	2
5 Calibration systems	2
6 Traceability	2
7 Calibration intervals	2
8 Records	3
9 Estimate of uncertainty	3
10 Conditioning	3
11 Procedures	4
12 Expression of results	4
13 Calibration records	4
14 Electrical measurements	5
14.1 Current	5
14.2 Voltage	5
14.3 Frequency and bandwidth	5
14.4 Resistance	5
14.5 Wattage	6
14.6 Chart recorders	6
15 Dimensional measurements	6
15.1 Length-measuring instruments	6
15.2 Linear dimensions	6
15.3 Profiles	6
15.4 Extension, compression and deflection	7
15.5 Finish, roughness and flatness	7
15.6 Sieves, mesh and pore size	7
15.7 Area	7
15.8 Volume	7
15.9 Angle	7
15.10 Levelling	7
15.11 Centre of percussion	7
16 Fluids: flow, pressure, viscosity and density measurements	8
16.1 Flow meters	8
16.2 Devices producing a specified flow rate	8
16.3 Air exchange rate	8
16.4 Pressure transducers	8
16.5 Manometers	8
16.6 Devices producing a specified pressure	8
16.7 Density	8
17 Optical measurements	9
17.1 Irradiance	9
17.2 Refractometers	9

17.3	Colour-measuring instruments	9
18	Temperature measurements	9
19	Chemical analysis and reference materials	9
19.1	Glassware	9
19.2	pH-meters	9
19.3	Reference materials	10
20	Relative-humidity measurements	10
21	Force measurements	10
21.1	Tensile-, flexural- and compression-testing machines	10
21.2	Force transducers	10
21.3	Devices producing a specified force	10
21.4	Torque	10
21.5	Energy	11
21.6	Inertia	11
22	Mass measurements	11
22.1	Balances	11
22.2	Weights	11
23	Miscellaneous measurements	11
23.1	Timers, clocks, etc.	11
23.2	Time intervals	11
23.3	Frequency and counters	12
23.4	Velocity	12
23.5	Tachometers	12
23.6	Rate of heating or cooling	12
24	Calibration schedules	12
Annex A (informative) Calibration intervals		13
Bibliography		15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 18899 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Testing and analyses*.
