National foreword

This British Standard reproduces verbatim ISO 18919:1999 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee CPW/42, Photography, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ISO title page, pages ii to iv, pages 1 to 14, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Consumer Products and Sector Committee, was published under the authority of the Standards Committee and comes into effect on 15 November 1999

Imaging materials — Thermally processed silver microfilm — Specifications for stability

*Matériaux pour image — Microfilm à l'argent traité thermiquement —
Spécifications pour la stabilité*

Contents

	Page
Foreword	iii
Introduction	1
1 Scope	1
2 Normative references	2
3 Terms and definitions	2
4 Safety and hazards	3
5 Requirements for the film base	3
6 Requirements for the thermally processed silver microfilm	3
7 Requirements for the emulsion and backing layers of thermally processed silver microfilm	4
8 Requirements for image stability	4
9 Test methods	5
10 Storage of films	9
Annex A (normative) Preparation of standard solution of tetrabutylammonium hydroxide	10
Annex B (informative) Numbering system for related International Standards	10
Annex C (informative) Effect of residual compounds on the thermally processed silver image	12
Annex D (informative) Accelerated image stability test for thermally processed silver microfilms	12
Annex E (informative) Bibliography	Inside back cover
Figure D.1 — Time vs. temperature for thermally processed silver microfilms (after four post-UV exposures)	14
Table 1 — Limits for tensile properties and loss in tensile properties on accelerated ageing of polyester-base film	4
Table 2 — Limits for changes in image density and contrast retention for the microfilm reader test	4
Table 3 — Conditions for image stability test	9
Table B.1 — New ISO numbers	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 18919 was prepared by Technical Committee ISO/TC 42, *Photography*.

This International Standard is one of a series of standards dealing with the physical properties and stability of imaging materials. To facilitate identification of these International Standards, they are assigned a number within the block from 18900 to 18999 (see Annex B).

Annex A forms an integral part of this International Standard. Annex B, Annex C, Annex D and Annex E are for information only.
