

BSI Standards Publication

Hot-dip galvanized and zinc-aluminium coated high tensile steel wire for bridge cables — Specifications

National foreword

This British Standard is the UK implementation of ISO 19203:2018.

The UK participation in its preparation was entrusted to Technical Committee ISE/106, Wire Rod and Wire.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols	3
5 Designation of the product	3
6 Information needed by the manufacturer	4
7 Requirements	4
7.1 Materials and manufacture	4
7.2 Standard properties	4
7.2.1 Geometrical properties	4
7.2.2 Straightness	5
7.2.3 Mechanical and coating properties	5
7.2.4 Appearance	6
7.3 Special properties	6
7.4 Traceability	6
8 Inspection	7
8.1 Inspection and inspection documents	7
8.2 Number of samples and test pieces	7
8.3 Evaluation of test results	7
8.4 Sorting and reprocessing	8
9 Test methods	8
9.1 Testing of standard properties	8
9.1.1 Measurement of geometrical characteristics	8
9.1.2 Tensile test	8
9.1.3 Elasticity modulus test	8
9.1.4 Torsion test	8
9.1.5 Ductility wrapping test	8
9.1.6 Mass of coating	8
9.1.7 Adhesive of coating	9
9.1.8 Surface quality	9
9.2 Testing of special properties	9
9.2.1 Uniformity of zinc or zinc-aluminium coating (dipping test)	9
9.2.2 Corrosion resistance test	9
9.2.3 Axial force fatigue test	9
9.2.4 Isothermal stress relaxation test	9
10 Delivery conditions	9
10.1 Identification	9
10.2 Coil dimensions	9
10.3 Coil weight	10
10.4 Transport and storage	10
Annex A (normative) Additional test methods — Axial force fatigue test	11
Annex B (normative) Additional test methods — Isothermal stress relaxation test	12
Annex C (informative) Calculation of the density of steel wire and diameter of bare steel wire	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 17, *Steel*, Subcommittee SC 17, *Steel wire rod and wire products*.
