

Surface chemical analysis — X-ray photoelectron spectroscopy — Reporting of methods used for charge control and charge correction

ICS 71.040.40

National foreword

This British Standard reproduces verbatim ISO 19318:2004 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee CII/60, Surface chemical analysis, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to v, a blank page, pages 1 to 11 and a back cover.

Foreword	iv
Introduction	v
1 Scope	1
2 Normative reference	1
3 Terms and definitions	1
4 Symbols and abbreviated terms	1
5 Apparatus	2
6 Calibration of binding-energy scale	2
7 Reporting of information related to charge control	2
7.1 Methods of charge control	2
7.2 Information on specimen	2
7.3 Instrument and operating conditions	3
7.4 General method for charge control	3
7.5 Reasons for needing charge control and for choosing the particular method for charge control	3
7.6 Values of experimental parameters	3
7.7 Information on the effectiveness of the method of charge control	4
8 Reporting of method(s) used for charge correction and the value of that correction	4
8.1 Methods of charge correction	4
8.2 Approach	4
8.3 Value of correction energy	4
Annex A (informative) Description of methods of charge control and charge correction	5
A.1 Introduction	5
A.2 Methods of charge control	5
A.3 Methods of charge correction	7
A.4 Bias referencing ^[17]	8
A.5 Auger parameter measurements ^[32-34]	9
Bibliography	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 19318 was prepared by Technical Committee ISO/TC 201, *Surface chemical analysis*, Subcommittee SC 5, *Auger electron spectroscopy*.
