

BSI Standards Publication

Mechanical vibration and shock — Resilient mounting systems

Part 3: Technical information to be
exchanged for application of vibration
isolation to new buildings

National foreword

This British Standard is the UK implementation of ISO 2017-3:2015.

The UK participation in its preparation was entrusted to Technical Committee GME/21, Mechanical vibration, shock and condition monitoring.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

ICS 17.160

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 December 2015.

Amendments/corrigenda issued since publication

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Purpose of vibration isolation (why isolate mechanical systems)	2
5 What is to be isolated	3
6 Applicability of vibration isolation (when to isolate structures or mechanical systems)	3
7 Measurement and evaluation of vibration conditions (how to isolate)	3
8 Information for the choice of an isolation mounting system	3
9 Information to be supplied by the owner of the project	4
9.1 Building	4
9.2 Sensitive equipment	4
10 Information to be provided by the supplier of the isolation system	5
10.1 Performance of isolation system	5
10.2 Physical data of the isolation system	5
10.3 Dynamic behaviour	5
10.4 Durability	6
10.5 Environmental data	6
10.6 Maintenance data	6
11 Validation of isolation performance	6
Bibliography	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 108, *Mechanical vibration, shock and condition monitoring*.

ISO 2017 consists of the following parts, under the general title *Mechanical vibration and shock — Resilient mounting systems*:

- *Part 1: Technical information to be exchanged for the application of isolation systems*
- *Part 2: Technical information to be exchanged for the application of vibration isolation associated with railway systems*
- *Part 3: Technical information to be exchanged for application of vibration isolation to new buildings*
