

Cryogenic vessels — Cryogenic insulation performance

ICS 23.020.40

National foreword

This British Standard was published by BSI. It is the UK implementation of ISO 21014:2006.

The UK participation in its preparation was entrusted to Technical Committee PVE/18, Cryogenic vessels.

A list of organizations represented on PVE/18 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 March 2007

Foreword.....	iv
Introduction	v
1 Scope	1
2 Terms and definitions.....	1
3 General conditions for all methods	2
4 Measuring the heat leak by the loss of product method	3
4.1 General.....	3
4.2 Test procedure	3
4.3 Determination of the heat leak in units of energy per unit time	4
4.4 Determination of the heat leak as a percentage loss of product per 24 h	4
5 Determination of the holding time for open systems from heat-leak data	4
6 Holding times for closed systems	5
6.1 Determination of the equilibrium holding time from heat-leak data.....	5
6.2 Calculation of the equilibrium holding time from heat-leak data	5
6.3 Static experimental holding time	6
7 Test report	7
Annex A (normative) Conversion of measured volumetric gaseous flow to mass flow	8
Annex B (normative) Correction of measured mass flow rate with regard to deviation from reference conditions.....	9
Annex C (normative) Equivalent loss determination for products other than the test product	14
Bibliography	15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 21014 was prepared by Technical Committee ISO/TC 220, *Cryogenic vessels*.

Introduction

Traditionally, there have been different methods of defining the insulation performance of cryogenic vessels. It is therefore necessary to harmonize such methods for different cryogenic vessels.

Figure 1 shows a logic diagram to help in the understanding of this International Standard.
