

Corrosion tests in artificial atmospheres — Accelerated corrosion tests involving alternate exposure to corrosion-promoting gases, neutral salt-spray and drying

ICS 77.060

National foreword

This British Standard is the UK implementation of ISO 21207:2004, incorporating corrigendum March 2008.

The start and finish of text introduced or altered by corrigendum is indicated in the text by tags. Tags altered by ISO corrigendum March 2008 is indicated in the text by AC1 AC1.

The UK participation in its preparation was entrusted to Technical Committee ISE/NFE/8, Corrosion of metals and alloys.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 May 2008

Corrosion tests in artificial atmospheres — Accelerated corrosion tests involving alternate exposure to corrosion-promoting gases, neutral salt-spray and drying

*Essais de corrosion en atmosphères artificielles — Essais de corrosion
accélérée par expositions alternées à des gaz oxydants ou au brouillard
salin neutre et à un séchage*

Contents		Page
Foreword.....		iv
Introduction		v
1	Scope.....	1
2	Normative references	1
3	Apparatus and reagents	1
3.1	Exposure of test objects to mixtures of NO ₂ and SO ₂ at a relative humidity of 95 % and a temperature of 25 °C	1
3.2	Salt spray testing in accordance with ISO 9227	2
3.3	Drying in standard laboratory climate	2
4	Evaluation of the corrosivity of the tests	3
4.1	Reference test panels	3
4.2	Arrangement of the reference panels during testing	3
4.3	Determination of mass loss after testing	3
4.4	Satisfactory performance of test.....	4
5	Test objects	4
6	Procedure.....	5
6.1	Test method A	5
6.2	Test method B	6
7	Evaluation of results.....	7
8	Test report.....	7
Annex A (informative) Recommended test periods		9
Bibliography		10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 21207 was prepared by Technical Committee ISO/TC 156, *Corrosion of metals and alloys*.
