

Isoprene rubber (IR) — Non-oil-extended, solution-polymerized types — Evaluation procedure

ICS 83.060

National foreword

This British Standard reproduces verbatim ISO 2303:2003 and implements it as the UK national standard. It supersedes BS 5474:1991 which is withdrawn. The UK participation in its preparation was entrusted to Technical Committee PRI/50, Rubber-raw, natural and synthetic, including latex and carbon black, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

This British Standards was published under the authority of the Standards Policy and Strategy Committee on 24 January 2003

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to iv, pages 1 to 10, an inside back cover and a back cover.

Foreword	iv
1 Scope.....	1
2 Normative references.....	1
3 Sampling and sample preparation	2
4 Physical and chemical tests on raw rubber	2
4.1 Mooney viscosity	2
4.2 Volatile matter.....	2
4.3 Ash.....	2
5 Preparation of the test mixes for evaluation of Isoprene rubbers	2
5.1 Standard test formulation.....	2
5.2 Procedure.....	3
6 Evaluation of vulcanization characteristics by a curemeter test	5
6.1 Using an oscillating disc curemeter.....	5
6.2 Using a rotorless curemeter	5
7 Evaluation of tensile stress-strain properties of vulcanized test mixes	6
8 Precision	6
8.1 General	6
8.2 Precision details	6
8.3 Precision results	6
9 Test report.....	7
Annex A (informative) Alternative mixing method by internal mixer-mill mixing procedure	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2303 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 3, *Raw materials (including latex) for use in the rubber industry*.

This fourth edition cancels and replaces the third edition (ISO 2303:1990), which has been technically revised.

Annex A of this International Standard is for information only.
