

Graphic technology — Colour and transparency of printing ink sets for four-colour printing —

Part 5: Flexographic printing

ICS 87.080

National foreword

This British Standard reproduces verbatim ISO 2846-5:2005 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee PAI/43, Graphic technology, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to v, a blank page, pages 1 to 13 and a back cover.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2846-5 was prepared by Technical Committee ISO/TC 130, *Graphic technology*.

ISO 2846 consists of the following parts, under the general title *Graphic technology — Colour and transparency of printing ink sets for four-colour printing*:

- *Part 1: Sheet-fed and heat-set web offset lithographic printing*
- *Part 2: Coldset offset lithographic printing*
- *Part 3: Publication gravure printing*
- *Part 4: Screen printing*
- *Part 5: Flexographic printing*

Introduction

The demand for the flexographic printing process to become more consistent and predictable has required standardization of the process to ensure that the various parties involved in flexographic printing production are able to control their part of the process in a meaningful way. An essential component in this process is the specification of the colorimetric and transparency characteristics of the ink set.

The purpose of this part of ISO 2846 is to define the colorimetric and transparency characteristics of standard sets of flexographic process inks. Standard inks allow flexographic printers to obtain different sets of inks which will all produce a similar colour when printed on the same substrate (paper, board, plastic, etc.). So, by meeting the requirements of this part of ISO 2846 a standard set of inks can be supplied by any ink manufacturer to any printer, who can then supply prints to a print buyer confident that the colour of the work produced will be that required. In addition, this part of ISO 2846 will allow colour separations for flexographic printing to be produced to known colour standards.

The colorimetric characteristics specified may only be obtained when the inks are printed on the specified reference substrate. However, two inks that are similar in colorimetric characteristics and transparency, according to this part of ISO 2846, will normally ensure similarity between the results obtained when both inks are printed on another substrate.
