

BSI Standards Publication

**Rubber hoses and hose assemblies for
liquefied petroleum gas (LPG) in the liquid
or gaseous phase and natural gas up to
2,5 MPa (25 bar) — Specification**

National foreword

This British Standard is the UK implementation of [ISO 2928:2021](#).

The UK participation in its preparation was entrusted to Technical Committee PRI/66, Rubber and plastics tubing, hoses and hose assemblies.

A list of organizations represented on this committee can be obtained on request to its committee manager.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

10.2 Hose assemblies	8
Annex A (normative) Flammability test	9
Annex B (normative) Frequency of testing for type tests and routine tests	11
Annex C (informative) Recommended frequency of testing for production acceptance tests	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 1, *Rubber and plastics hoses and hose assemblies*.

This fourth edition cancels and replaces the third edition (ISO 2928:2003), which has been technically revised.

The main changes compared to the previous edition are as follows:

- renaming of nominal size 9 into nominal size 10 and of nominal size 12 into nominal size 13 in [Tables 1](#) and [2](#);
- addition of hoses with a nominal size 10 in [Table 1](#);
- addition of non-pricked hoses in [Table 3](#);
- expansion of the hose/hose assembly classes in [Clause 4](#).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
