

Petroleum and liquid petroleum products — Measurement of level and temperature in storage tanks by automatic methods —

Part 4: Measurement of temperature in atmospheric tanks

ICS 75.180.30

National foreword

This British Standard reproduces verbatim ISO 4266-4:2002 and implements it as the UK national standard. Together with BS ISO 4266:2002 Parts 1 to 3 and Parts 5 and 6, it supersedes BS 7812:1995 which is withdrawn.

The UK participation in its preparation was entrusted by Technical Committee PTI/12, Petroleum measurement and sampling, to Subcommittee PTI/12/1, Static and dynamic petroleum measurement, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

This British Standard, having been prepared under the direction of the Materials and Chemicals Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 9 December 2002

Summary of pages

This document comprises a front cover, an inside front cover, the ISO title page, pages ii to v, a blank page, pages 1 to 14, an inside back cover and a back cover.

The BSI copyright date displayed in this document indicates when the document was last issued.

8.3 Averaging temperature elements	7
8.3.1 General	7
8.3.2 Upper, middle and lower temperature elements	7
8.3.3 Multiple-point temperature elements	8
8.3.4 Variable-length RTD temperature elements	8
8.3.5 Mid-level temperature element	8
8.3.6 Moveable spot temperature element	8

8.3.7 Other methods **9**

8.4 Thermowells for electronic temperature elements **9**

9 Calibration and field verification of ATTs **11**

9.1 Introduction **11**

9.2 Calibration of single-point, or mid-level temperature element ATTs for fiscal/custody transfer purposes **11**

9.2.1 Calibration prior to installation **11**

9.2.2 Initial field verification **11**

9.3 Calibration of upper, middle and lower or multiple-point ATTs for fiscal/custody transfer purposes **12**

9.3.1 Calibration prior to installation **12**

9.3.2 Initial field verification **12**

9.4 Calibration of variable-length ATTs for fiscal/custody transfer purposes **13**

9.4.1 Calibration prior to installation **13**

9.4.2 Initial field verification **13**

9.5 Subsequent verification of ATTs **13**

9.5.1 General **13**

9.5.2 Frequency of subsequent verification **13**

9.5.3 Record keeping **13**

10 Data communication and receiving **13**

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO 4266 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 4266-4 was prepared by Technical Committee ISO/TC 28, *Petroleum products and lubricants*, Subcommittee SC 3, *Static petroleum measurement*.

ISO 4266-4, together with ISO 4266-1 to ISO 4266-3 and ISO 4266-5 and ISO 4266-6, cancels and replaces ISO 4266:1994, which has been technically revised.

ISO 4266 consists of the following parts, under the general title *Petroleum and liquid petroleum products — Measurement of level and temperature in storage tanks by automatic methods*:

- *Part 1: Measurement of level in atmospheric tanks*
- *Part 2: Measurement of level in marine vessels*
- *Part 3: Measurement of level in pressurized storage tanks (non-refrigerated)*
- *Part 4: Measurement of temperature in atmospheric tanks*
- *Part 5: Measurement of temperature in marine vessels*
- *Part 6: Measurement of temperature in pressurized storage tanks (non-refrigerated)*
