

**BSI Standards Publication**

## **Hard coal — Determination of total moisture**

---

## National foreword

This British Standard is the UK implementation of ISO 589:2008.

The UK participation in its preparation was entrusted to Technical Committee PTI/16, Solid mineral fuels.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

| 6.1 Method A                                                                | 2         |
| 6.2 Method B                                                                | 3         |
| 6.3 Methods A and B                                                         | 3         |
| <b>7 Sample</b>                                                             | <b>3</b>  |
| 7.1 General                                                                 | 3         |
| 7.2 Sampling and sample preparation                                         | 3         |
| 7.3 Precautions against loss of moisture                                    | 3         |
| 7.4 Moisture determination with on-site air-drying — Method A only          | 4         |
| 7.5 Moisture determination without on-site air-drying — Methods A and B     | 4         |
| <b>8 Procedure</b>                                                          | <b>4</b>  |
| 8.1 Methods A 1 and A 2 — Two-stage methods                                 | 4         |
| 8.1.1 First-stage moisture — Free moisture                                  | 4         |
| 8.1.2 Method A 1 — Second-stage moisture (residual moisture) under nitrogen | 5         |
| 8.1.3 Method A 2 — Second-stage moisture (residual moisture) in air         | 5         |
| 8.1.4 Calculation and expression of results                                 | 5         |
| 8.2 Method B — Single-stage method                                          | 6         |
| 8.2.1 Method B 1 — Drying under nitrogen                                    | 6         |
| 8.2.2 Method B 2 — Drying in air                                            | 6         |
| 8.2.3 Calculation and expression of results                                 | 6         |
| <b>9 Precision</b>                                                          | <b>6</b>  |
| 9.1 Repeatability limit                                                     | 6         |
| 9.2 Reproducibility critical difference                                     | 7         |
| <b>10 Test report</b>                                                       | <b>7</b>  |
| <b>Bibliography</b>                                                         | <b>8</b>  |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 589 was prepared by Technical Committee ISO/TC 27, *Solid mineral fuels*, Subcommittee SC 5, *Methods of analysis*.

This fourth edition cancels and replaces the third edition (ISO 589:2003), which has been technically revised.
