

BSI Standards Publication

Agricultural irrigation equipment — Volumetric valves — General requirements and test methods

National foreword

This British Standard is the UK implementation of ISO 7714:2018. It supersedes BS ISO 7714:2008, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee AGE/30, Irrigation and drainage equipment.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Classification	3
4.1 According to accuracy of cumulative volume counter	3
4.2 According to method of operation as a system of volumetric valves	3
5 Markings	4
6 Technical requirements	4
6.1 General	4
6.2 Threaded and flanged connections	4
6.3 Metrological requirements	5
6.3.1 General	5
6.3.2 Class 1, Class 2 and Class 3 — Sizes DN16, DN20 and DN25	5
6.3.3 Class 1 and Class 2 — Sizes DN40 to DN300	5
6.3.4 Overload flow rate (q_{V4})	6
7 Mechanical, functional and accuracy tests	6
7.1 General	6
7.2 Accuracy of measuring devices	6
7.3 Sampling and minimum acceptance requirements	6
7.3.1 Pattern approval tests	6
7.3.2 Thermal preconditioning	7
7.4 Test of resistance to hydrostatic pressure	7
7.5 Test of manual opening and closing	7
7.5.1 Non-serial volumetric valves	7
7.5.2 Serial volumetric valves (single outlet, single outlet “skip over”, and dual outlet)	7
7.6 Tests of accuracy	8
7.6.1 General	8
7.6.2 Flow rates and maximum permissible error for accuracy tests	8
7.7 Pressure loss	9
7.7.1 Requirement	9
7.7.2 Test procedure	9
7.8 Endurance tests	9
7.8.1 Endurance flow conditioning	9
7.8.2 Accuracy tests after endurance conditioning	9
7.8.3 Endurance of operating mechanism	10
8 Information to be supplied by the manufacturer	10
Annex A (informative) Quality of irrigation water	12
Bibliography	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 18, *Irrigation and drainage equipment and systems*.

This fifth edition cancels and replaces the fourth edition ([ISO 7714:2008](http://www.iso.org/iso/7714:2008)), which has been technically revised.

The main changes are the following:

- addition of a paragraph to [6.1](#) that metering valves with metrological characteristics shall comply with the relevant standard for meters for irrigation water;
- addition of ISO 16399 to the Normative references.
