

Milling machine arbors with 7/24 tapers —

Part 1: Dimensions and designation

ICS 25.060.20

National foreword

This British Standard was published by BSI. It is the UK implementation of ISO 839-1:2006. It supersedes BS 5517:1977 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MTE/5, Engineer’s rotary cutting tools of high speed steel.

A list of organizations represented on MTE/5 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 28 February 2007

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 839-1 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 2, *High speed steel cutting tools and their attachments*.

This second edition cancels and replaces the first edition (ISO 839-1:1976), which has been technically revised.

ISO 839 consists of the following parts, under the general title *Milling machine arbors with 7/24 tapers*:

- *Part 1: Dimensions and designation*
- *Part 2: Accessories*
