

Diesel engines — Steel tubes for high-pressure fuel injection pipes —

Part 1: Requirements for seamless cold-drawn single-wall tubes

ICS 43.060.40

National foreword

This British Standard was published by BSI. It is the UK implementation of ISO 8535-1:2006. It supersedes BS ISO 8535-1:1996 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee MCE/22, Engines for road vehicles.

A list of organizations represented on MCE/22 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 29 September 2006

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 8535-1 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 7, *Injection equipment and filters for use on road vehicles*.

This fourth edition cancels and replaces the third edition (ISO 8535-1:1996), which has been technically revised.

ISO 8535 consists of the following parts, under the general title *Diesel engines — Steel tubes for high-pressure fuel injection pipes*:

- *Part 1: Requirements for seamless cold-drawn single-wall tubes*
- *Part 2: Requirements for composite tubes*

NOTE The first part of the general title “*Diesel engines*” is used for Part 1 only; for Part 2 “*Compression-ignition engines*” is still used but will be replaced at the next revision.

Annex A is for information only.
