

BSI Standards Publication

## **Rubber hoses and hose assemblies for liquefied petroleum gas in motor vehicles — Specification**

---

## National foreword

This British Standard is the UK implementation of ISO 8789:2018. It supersedes BS ISO 8789:2009, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PRI/66, Rubber and plastics tubing, hoses and hose assemblies.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

| <b>Foreword</b>                                                                                                         | <b>iv</b> |
| <b>Introduction</b>                                                                                                     | <b>v</b>  |
| <b>1 Scope</b>                                                                                                          | <b>1</b>  |
| <b>2 Normative references</b>                                                                                           | <b>1</b>  |
| <b>3 Terms and definitions</b>                                                                                          | <b>1</b>  |
| <b>4 Materials and construction</b>                                                                                     | <b>2</b>  |
| 4.1 Materials                                                                                                           | 2         |
| 4.2 Construction                                                                                                        | 2         |
| <b>5 Dimensions and tolerance</b>                                                                                       | <b>2</b>  |
| 5.1 Inside diameter                                                                                                     | 2         |
| 5.2 Minimum bending radii                                                                                               | 2         |
| 5.3 Concentricity                                                                                                       | 2         |
| 5.4 Length                                                                                                              | 3         |
| <b>6 Physical properties</b>                                                                                            | <b>3</b>  |
| 6.1 Rubber compounds                                                                                                    | 3         |
| <b>7 Performance requirements</b>                                                                                       | <b>3</b>  |
| 7.1 General                                                                                                             | 3         |
| 7.2 Visual examination                                                                                                  | 3         |
| 7.3 Finished hose and hose assemblies                                                                                   | 4         |
| <b>8 Requirements for fittings</b>                                                                                      | <b>4</b>  |
| <b>9 Requirements for hose assemblies</b>                                                                               | <b>4</b>  |
| 9.1 Leakage test                                                                                                        | 4         |
| 9.2 Minimum burst pressure, proof pressure and permeability to propane                                                  | 4         |
| 9.3 Visual examination                                                                                                  | 4         |
| <b>10 Frequency of testing</b>                                                                                          | <b>5</b>  |
| <b>11 Type tests</b>                                                                                                    | <b>5</b>  |
| <b>12 Marking</b>                                                                                                       | <b>5</b>  |
| <b>Annex A (normative) Type and routine testing of production hoses and hose assemblies</b>                             | <b>6</b>  |
| <b>Annex B (informative) Periodic testing of production hoses and hose assemblies</b>                                   | <b>7</b>  |
| <b>Annex C (informative) Recommendations for lengths of supplied hoses and tolerances on lengths of hose assemblies</b> | <b>8</b>  |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 1, *Rubber and plastics hoses and hose assemblies*.

This third edition cancels and replaces the second edition (ISO 8789:2009), which has been technically revised.

The main changes compared to the previous edition are as follows:

- normative references have been updated;
- requirement on physical properties of finished products has been added;
- minimum bend radii has been introduced;
- new clauses on frequency of testing and type tests have been added.
