

Iron ores — Determination of vanadium —

Part 1: BPHA spectrophotometric method

ICS 73.060.10

National foreword

This British Standard was published by BSI. It is the UK implementation of ISO 9683-1:2006. It supersedes BS 7020-11-1:1993 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/58, Iron ores.

A list of organizations represented on ISE/58 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 April 2007

Foreword.....	iv
1 Scope	1
2 Normative references	1
3 Principle	1
4 Reagents	2
5 Apparatus	3
6 Sampling and samples	3
6.1 Laboratory sample	3
6.2 Preparation of predried test samples	4
7 Procedure	4
7.1 Number of determinations	4
7.2 Test portion	4
7.3 Blank test and check test	4
7.4 Determination	4
7.4.1 Decomposition of the test portion	4
7.4.2 Colour development and extraction	5
7.4.3 Spectrophotometric measurement	5
7.4.4 Calibration	5
8 Expression of results	6
8.1 Calculation of mass fraction of vanadium	6
8.2 General treatment of results	6
8.2.1 Repeatability and permissible tolerance	6
8.2.2 Determination of analytical result	7
8.2.3 Between-laboratories precision	7
8.2.4 Check for trueness	8
8.2.5 Calculation of final result	8
8.3 Oxide factor	9
9 Test report	9
Annex A (normative) Flowsheet of the procedure for the acceptance of analytical values for test samples.....	10
Annex B (informative) Derivation of repeatability and permissible equations	11
Annex C (informative) Precision data obtained by international analytical trials	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 9683-1 was prepared by Technical Committee ISO/TC 102, *Iron ore and direct reduced iron*, Subcommittee SC 2, *Chemical analysis*.

This first edition of ISO 9683-1 cancels and replaces ISO 9683:1991, which has been technically revised. It has been updated to alter the manner in which precision data are presented.

ISO 9683 consists of the following part, under the general title *Iron ores — Determination of vanadium*:

— *Part 1: BPHA spectrophotometric method*

The following part is under preparation:

— *Part 2: Flame atomic absorption spectrometric method*
