

BSI Standards Publication

Telecommunications and exchange between information technology systems — Requirements for local and metropolitan area networks

Part 1Q: Bridges and bridged networks

National foreword

This British Standard is the UK implementation of ISO/IEC/IEEE 8802-1Q:2024. It supersedes BS ISO/IEC/IEEE 8802-1Q:2020, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee IST/6, Data communications.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

ISO/IEC/IEEE 8802-1Q was prepared by the LAN/MAN of the IEEE Computer Society (as IEEE Std 802.1Q-2022) and drafted in accordance with its editorial rules. It was adopted, under the “fast-track procedure” defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*.

This third edition cancels and replaces the second edition (ISO/IEC/IEEE 8802-1Q:2020), which has been technically revised. It also incorporates the Amendments: ISO/IEC/IEEE 8802-1Q:2020/Amd 2:2021, ISO/IEC/IEEE 8802-1Q:2020/Amd 3:2021, ISO/IEC/IEEE 8802-1Q:2020/Amd 31:2021.

A list of all parts in the ISO/IEC/IEEE 8802 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

IEEE Std 802.1Q™-2022
(Revision of IEEE Std 802.1Q-2018)

IEEE Standard for Local and metropolitan area networks— Bridges and Bridged Networks

LAN/MAN Standards Committee
of the
IEEE Computer Society

Approved 21 September 2022
IEEE SA Standards Board

Abstract: This standard specifies how the Media Access Control (MAC) Service is supported by Bridged Networks, the principles of operation of those networks, and the operation of MAC Bridges and VLAN Bridges, including management, protocols, and algorithms.

Keywords: Bridged Network, IEEE 802.1Q™, LAN, local area network, MAC Bridge, metropolitan area network, MSTP, Multiple Spanning Tree Protocol, PBN, Provider Bridged Network, Rapid Spanning Tree Protocol, RSTP, Shortest Path Bridging Protocol, SPB Protocol, Time-Sensitive Networking, TSN, Virtual Bridged Network, virtual LAN, VLAN Bridge

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE Standards documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page (<https://standards.ieee.org/ipr/disclaimers.html>), appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents are developed within IEEE Societies and subcommittees of IEEE Standards Association (IEEE SA) Board of Governors. IEEE develops its standards through an accredited consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed by volunteers with scientific, academic, and industry-based expertise in technical working groups. Volunteers are not necessarily members of IEEE or IEEE SA and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE makes no warranties or representations concerning its standards, and expressly disclaims all warranties, express or implied, concerning this standard, including but not limited to the warranties of merchantability, fitness for a particular purpose and non-infringement. In addition, IEEE does not warrant or represent that the use of the material contained in its standards is free from patent infringement. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity, nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: THE NEED TO PROCURE SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE is the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that the presenter's views should be considered the personal views of that individual rather than the formal position of IEEE, IEEE SA, the Standards Committee, or the Working Group. Statements made by volunteers may not represent the formal position of their employer(s) or affiliation(s).

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE or IEEE SA. However, **IEEE does not provide interpretations, consulting information, or advice pertaining to IEEE Standards documents.**

Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its Societies and subcommittees of the IEEE SA Board of Governors are not able to provide an instant response to comments, or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in evaluating comments or in revisions to an IEEE standard is welcome to join the relevant IEEE working group. You can indicate interest in a working group using the Interests tab in the Manage Profile & Interests area of the [IEEE SA myProject system](#).¹ An IEEE Account is needed to access the application.

Comments on standards should be submitted using the [Contact Us](#) form.²

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not constitute compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Data privacy

Users of IEEE Standards documents should evaluate the standards for considerations of data privacy and data ownership in the context of assessing and using the standards in compliance with applicable laws and regulations.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, neither IEEE nor its licensors waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate licensing fees, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400; <https://www.copyright.com/>. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit [IEEE Xplore](#) or [contact IEEE](#).³ For more information about the IEEE SA or IEEE's standards development process, visit the IEEE SA Website.

Errata

Errata, if any, for all IEEE standards can be accessed on the [IEEE SA Website](#).⁴ Search for standard number and year of approval to access the web page of the published standard. Errata links are located under the Additional Resources Details section. Errata are also available in [IEEE Xplore](#). Users are encouraged to periodically check for errata.

Patents

IEEE Standards are developed in compliance with the [IEEE SA Patent Policy](#).⁵

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has

³ Available at: <https://ieeexplore.ieee.org/browse/standards/collection/ieee>.

⁴ Available at: <https://standards.ieee.org/standard/index.html>.

⁵ Available at: <https://standards.ieee.org/about/sasb/patcom/materials.html>.

filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE SA Website at <https://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

IMPORTANT NOTICE

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. IEEE Standards development activities consider research and information presented to the standards development group in developing any safety recommendations. Other information about safety practices, changes in technology or technology implementation, or impact by peripheral systems also may be pertinent to safety considerations during implementation of the standard. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

Participants

At the time this standard was submitted to the IEEE-SA Standards Board for approval, the IEEE 802.1 Working Group had the following membership:

Glenn Parsons, *Chair*
Jessy V. Rouyer, *Vice Chair*
John Messenger, *Editor*
Mick Seaman, *Editor*

Astrit Ademaj
Venkat Arunarthi
Ralf Assmann
Huajie Bao

Introduction

This introduction is not part of IEEE Std 802.1Q™-2022, IEEE Standard for Local and metropolitan area networks—Bridges and Bridged Networks.

IEEE Std 802.1Q™-2022 incorporates the text of the following amendments into IEEE Std 802.1Q™-2018.

IEEE Std 802.1Qcc™-2018	Stream Reservation Protocol (SRP) Enhancements and Performance Improvements
IEEE Std 802.1Qcp™-2018	YANG Data Model
IEEE Std 802.1Qcy™-2019	Virtual Station Interface (VSI) Discovery and Configuration Protocol (VDP) Extension to Support Network Virtualization Overlays Over Layer 3 (NVO3)
IEEE Std 802.1Qcx™-2020	YANG Data Model for Connectivity Fault Management
IEEE Std 802.1Qcr™-2020	Asynchronous Traffic Shaping

The 2018 revision of this standard incorporated the text of the following amendments into IEEE Std 802.1Q-2014.

IEEE Std 802.1Qcd™-2015	Application Virtual Local Area Network (VLAN) Type, Length, Value (TLV)
IEEE Std 802.1Qca™-2015	Path Control and Reservation
IEEE Std 802.1Q-2014 Cor 1-2015	Technical and editorial corrections
IEEE Std 802.1Qbv™-2015	Enhancements for scheduled traffic
IEEE Std 802.1Qbu™-2016	Frame preemption
IEEE Std 802.1Qbz™-2016	Enhancements to Bridging of IEEE 802.11 Media
IEEE Std 802.1Qci™-2017	Per-Stream Filtering and Policing
IEEE Std 802.1Qch™-2017	Cyclic Queuing and Forwarding

The 2014 revision of this standard incorporated the text of the following amendments into IEEE Std 802.1Q-2011.

IEEE Std 802.1Qbe™-2011	Multiple I-SID Registration Protocol
IEEE Std 802.1Qbc™-2011	Provider Bridging—Remote Customer Service Interfaces
IEEE Std 802.1Qbb™-2011	Priority-based Flow Control
IEEE Std 802.1Qaz™-2011	Enhanced Transmission Selection for Bandwidth Sharing Between Traffic Classes
IEEE Std 802.1Qbf™-2011	PBB-TE Infrastructure Segment Protection
IEEE Std 802.1Qbg™-2012	Edge Virtual Bridging
IEEE Std 802.1aq™-2012	Shortest Path Bridging
IEEE Std 802.1Q-2011/Cor 2-2012	Technical and editorial corrections
IEEE Std 802.1Qbp™-2014	Equal Cost Multiple Paths (ECMP)

The 2011 revision of this standard incorporated the text of the following amendments into IEEE Std 802.1Q-2005.

IEEE Std 802.1ad™-2005	Provider Bridges
IEEE Std 802.1ak™-2007	Multiple Registration Protocol
IEEE Std 802.1ag™-2007	Connectivity Fault Management
IEEE Std 802.1ah™-2008	Provider Backbone Bridges
IEEE Std 802-1Q-2005/Cor-1-2008	Corrections to the Multiple Registration Protocol

IEEE Std 802.1ap™-2008	Management Information Base (MIB) Definitions for VLAN Bridges
IEEE Std 802.1Qaw™-2009	Management of Data Driven and Data Dependent Connectivity Faults
IEEE Std 802.1Qay™-2009	Provider Backbone Bridge Traffic Engineering
IEEE Std 802.1aj™-2009	Two-Port Media Access Control (MAC) Relay
IEEE Std 802.1Qav™-2009	Forwarding and Queuing Enhancements for Time-Sensitive Streams
IEEE Std 802.1Qau™-2010	Congestion Notification
IEEE Std 802.1Qat™-2010	Stream Reservation Protocol

Clause 13 of IEEE Std 802.1Q-2011 was also revised to include an updated specification of the Rapid Spanning Tree Algorithm and Protocol (RSTP), superseding references to IEEE Std 802.1D™-2004 [B12].⁶

The 2005 revision of this standard incorporated the text of the following amendments into IEEE Std 802.1Q-1998.

IEEE Std 802.1u™-2001	Technical and Editorial Corrections
IEEE Std 802.1v™-2001	VLAN Classification by Protocol and Port
IEEE Std 802.1s™-2002	Multiple Spanning Trees

This standard was first published as IEEE Std 802.1Q-1998, making use of the concepts and mechanisms of LAN Bridging that were introduced by IEEE Std 802.1D and defining additional mechanisms to allow the implementation of Virtual Bridged Networks.

For an introduction to this standard that details each of the provisions introduced by amendments and revisions throughout its development, refer to 1.3.

This standard contains state-of-the-art material. The area covered by this standard is undergoing evolution. Revisions are anticipated within the next few years to clarify existing material, to correct possible errors, and to incorporate new related material. Information on the current revision state of this and other IEEE 802 standards may be obtained from

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854-4141
USA

⁶ The numbers in brackets correspond to those of the bibliography in Annex W.

Contents

1.	Overview	74
1.1	Scope	74
1.2	Purpose	74
1.3	Introduction	75
2.	Normative references	83
3.	Definitions	87
4.	Abbreviations	109
5.	Conformance	115
5.1	Requirements terminology	115
5.2	Conformant components and equipment	115
5.3	Protocol Implementation Conformance Statement (PICS)	116
5.4	VLAN Bridge component requirements	116
5.4.1	VLAN Bridge component options	117
5.4.2	Multiple VLAN Registration Protocol (MVRP) requirements	123
5.4.3	VLAN Bridge requirements for congestion notification	123
5.4.4	Multiple Stream Registration Protocol (MSRP) requirements	124
5.4.5	Shortest Path Bridging (SPB) operation (optional)	124
5.4.6	Path Control and Reservation (PCR) (optional)	125
5.5	C-VLAN component conformance	126
5.5.1	C-VLAN component options	126
5.5.2	TE-MSTID (optional)	126
5.6	S-VLAN component conformance	127
5.6.1	S-VLAN component options	127
5.6.2	S-VLAN component requirements for Provider Backbone Bridge Traffic Engineering (PBB-TE)	127
5.6.3	S-VLAN component requirements for PBB-TE IPS	128
5.6.4	S-VLAN component requirements for ECMP with flow filtering	128
5.7	I-component conformance	128
5.7.1	I-component options	128
5.8	B-component conformance	129
5.8.1	B-component options	129
5.8.2	B-component requirements for PBB-TE	129
5.8.3	B-component requirements for PBB-TE IPS	130
5.8.4	B-component requirements for ECMP with flow filtering	130
5.9	C-VLAN Bridge conformance	130
5.9.1	C-VLAN Bridge options	130
5.10	Provider Bridge conformance	130
5.10.1	S-VLAN Bridge conformance	131
5.10.2	Provider Edge Bridge conformance	131
5.11	System requirements for Priority-based Flow Control (PFC)	131
5.12	Backbone Edge Bridge (BEB) conformance	131
5.12.1	BEB requirements for PBB-TE	132
5.13	MAC Bridge component requirements	132
5.13.1	MAC Bridge component options	132
5.14	MAC Bridge conformance	133
5.14.1	MAC Bridge options	133

5.15	TPMR component conformance.....	134
5.15.1	TPMR component options	134
5.16	TPMR conformance.....	134
5.16.1	TPMR options	135
5.17	T-component conformance.....	135
5.17.1	T-component options	135
5.18	End station requirements for MMRP, MVRP, and MSRP	135
5.18.1	MMRP requirements and options	135
5.18.2	MVRP requirements and options	136
5.18.3	MSRP requirements and options	136
5.19	VLAN-aware end station requirements for CFM	137
5.20	End station requirements—FQTSS	137
5.21	End station requirements for congestion notification	138
5.22	MAC-specific bridging methods	138
5.23	EVB Bridge requirements.....	139
5.24	EVB station requirements.....	139
5.24.1	Edge relay (ER) requirements	140
5.25	End station requirements—enhancements for scheduled traffic	141
5.26	End station requirements—enhancements for frame preemption.....	142
5.27	End station requirements—PSFP.....	142
5.28	End station requirements—Cyclic queuing and forwarding.....	142
5.29	TSN CNC station requirements	142
5.30	VDP-NVO3 requirements.....	143
5.30.1	VDP-NVO3 nNVE requirements	143
5.30.2	VDP-NVO3 tNVE requirements	143
5.31	End station requirements—ATS.....	143
6.	Support of the MAC Service	144
6.1	Basic architectural concepts and terms.....	145
6.2	Provision of the MAC Service.....	145
6.2.1	Point-to-point, multipoint-to-multipoint, and rooted-multipoint connectivity ...	146
6.3	Support of the MAC Service	146
6.4	Preservation of the MAC Service	147
6.5	Quality of service (QoS) maintenance.....	147
6.5.1	Service availability	147
6.5.2	Frame loss	148
6.5.3	Frame misordering	148
6.5.4	Frame duplication	149
6.5.5	Transit delay	150
6.5.6	Frame lifetime	150
6.5.7	Undetected frame error rate	151
6.5.8	Maximum Service Data Unit Size	151
6.5.9	Priority	151
6.5.10	Throughput	152
6.6	Internal Sublayer Service (ISS)	153
6.7	Support of the ISS by specific MAC procedures.....	153
6.7.1	Support of the ISS by IEEE Std 802.3 (Ethernet)	153
6.7.2	Frame preemption	153
6.8	Enhanced Internal Sublayer Service (EISS)	154
6.8.1	Service primitives	154
6.8.2	Status parameters	155
6.8.3	Point-to-point parameters	155
6.8.4	Control primitives and parameters	155

6.9	Support of the EISS	156
6.9.1	Data indications	157
6.9.2	Data requests	158
6.9.3	Priority Code Point encoding	158
6.9.4	Regenerating priority	160
6.10	Support of the ISS/EISS by PIPs	161
6.10.1	Data indications	163
6.10.2	Data requests	164
6.10.3	Priority Code Point encoding	164
6.11	Support of the EISS by CBPs	165
6.11.1	Data indications	166
6.11.2	Data requests	167
6.11.3	Priority Code Point decoding	168
6.11.4	Regenerating priority	168
6.12	Protocol VLAN classification.....	168
6.12.1	Protocol Templates	170
6.12.2	Protocol Group Identifiers	170
6.12.3	Protocol Group Database	170
6.13	Support of the ISS for attachment to a PBN	171
6.13.1	Data requests	172
6.13.2	Data indications	172
6.14	Support of the ISS within a system.....	173
6.15	Support of the ISS by additional technologies.....	173
6.16	Filtering services in Bridged Networks	173
6.16.1	Purpose(s) of filtering service provision	174
6.16.2	Goals of filtering service provision	174
6.16.3	Users of filtering services	174
6.16.4	Basis of service	174
6.16.5	Categories of service	175
6.16.6	Service configuration	175
6.16.7	Service definition for Extended Filtering Services	175
6.17	EISS Multiplex Entity.....	177
6.18	Backbone Service Instance Multiplex Entity.....	178
6.18.1	Demultiplexing direction	179
6.18.2	Multiplexing direction	180
6.18.3	Priority Code Point encoding	180
6.18.4	Status parameters	180
6.19	TESI Multiplex Entity	181
6.20	Support of the ISS with signaled priority	182
6.20.1	Data indications	182
6.20.2	Data requests	183
6.21	Infrastructure Segment Multiplex Entity	183
6.22	PDU and protocol discrimination and media.....	184
7.	Principles of Virtual Bridged Network operation.....	185
7.1	Network overview.....	185
7.2	Use of VLANs	186
7.3	Active topology.....	186
7.4	VLAN topology	187
7.5	Locating end stations	188
7.6	Ingress, forwarding, and egress rules.....	189

8.	Principles of Bridge operation	190
8.1	Bridge operation	190
8.1.1	Relay	190
8.1.2	Filtering and relaying information	191
8.1.3	Duplicate frame prevention	191
8.1.4	Traffic segregation	191
8.1.5	Traffic reduction	192
8.1.6	Traffic expediting	192
8.1.7	Conversion of frame formats	192
8.2	Bridge architecture.....	193
8.3	Model of operation.....	195
8.4	Active topologies, learning, and forwarding	199
8.5	Bridge Port Transmit and Receive.....	200
8.5.1	Bridge Port connectivity	200
8.5.2	TPMR Port connectivity	201
8.5.3	Support of Higher Layer Entities	202
8.6	The Forwarding Process	202
8.6.1	Active topology enforcement	203
8.6.2	Ingress filtering	205
8.6.3	Frame filtering	205
8.6.4	Egress filtering	208
8.6.5	Flow classification and metering	208
8.6.6	Queuing frames	217
8.6.7	Queue management	218
8.6.8	Transmission selection	219
8.6.9	Scheduled traffic state machines	225
8.6.10	Stream gate control state machines	232
8.6.11	ATS Scheduler state machines	234
8.7	The Learning Process.....	238
8.7.1	Default filtering utility criteria	238
8.7.2	Enhanced filtering utility criteria	238
8.7.3	Ageing of Dynamic Filtering Entries	239
8.8	The Filtering Database (FDB)	239
8.8.1	Static Filtering Entries	242
8.8.2	Static VLAN Registration Entries	243
8.8.3	Dynamic Filtering Entries	244
8.8.4	MAC Address Registration Entries	245
8.8.5	Dynamic VLAN Registration Entries	245
8.8.6	Default Group filtering behavior	246
8.8.7	Dynamic Reservation Entries	247
8.8.8	Allocation of VIDs to FIDs	247
8.8.9	Querying the FDB	248
8.8.10	Determination of the member set for a VID	252
8.8.11	Permanent Database	252
8.8.12	Connection_Identifier	252
8.9	MST, SPB, and ESP configuration information.....	253
8.9.1	MST Configuration Table	254
8.9.2	MST configuration identification	254
8.9.3	FID to MSTI Allocation Table	254
8.9.4	SPT Configuration Identification	254
8.10	Spanning Tree Protocol Entity.....	255
8.11	MRP entities	255
8.12	Bridge Management Entity	256

8.13	Addressing	256
8.13.1	End stations	256
8.13.2	Bridge Ports	256
8.13.3	Use of LLC by Spanning Tree Protocol Entities	257
8.13.4	Reserved MAC addresses	257
8.13.5	Group MAC addresses for spanning tree entity	257
8.13.6	Group MAC addresses for MRP Applications	259
8.13.7	Bridge Management Entities	260
8.13.8	Unique identification of a Bridge	260
8.13.9	Points of attachment and connectivity for Higher Layer Entities	260
8.13.10	VLAN attachment and connectivity for Higher Layer Entities	264
8.13.11	CFM entities	265
9.	Tagged frame format	267
9.1	Purpose of tagging	267
9.2	Representation and encoding of tag fields	267
9.3	Tag format.....	268
9.4	TPID formats	268
9.5	Tag Protocol identification	268
9.6	VLAN Tag Control Information (TCI).....	269

21.4.2	Version	1261
21.4.3	OpCode	1262
21.4.4	Flags	1262
21.4.5	First TLV Offset	1263
21.5	TLV format	1263
21.5.1	General format for CFM TLVs	1263
21.5.2	Organization-Specific TLV	1263
21.5.3	Sender ID TLV	1265
21.5.4	Port Status TLV	1266
21.5.5	Interface Status TLV	1267
21.5.6	Data TLV	1268
21.5.7	End TLV	1268
21.6	CCM format	1268
21.6.1	Flags	1269
21.6.2	First TLV Offset	1270
21.6.3	Sequence Number	1270
21.6.4	Maintenance association Endpoint Identifier	1270
21.6.5	Maintenance Association Identifier	1270
21.6.6	Defined by ITU-T G.8013/Y.1731	1273
21.6.7	Optional CCM TLVs	1273
21.7	LBM and LBR formats	1273
21.7.1	Flags	1274
21.7.2	First TLV Offset	1274
21.7.3	Loopback Transaction Identifier	1274
21.7.4	Additional LBM/LBR TLVs	1274
21.7.5	PBB-TE MIP TLV	1274

21.8	LTM format	1275
21.8.1	Flags	1276
21.8.2	First TLV Offset	1276
21.8.3	LTM Transaction Identifier	1276
21.8.4	LTM TTL	1276
21.8.5	Original MAC Address	1276
21.8.6	Target MAC Address	1276
21.8.7	Additional LTM TLVs	1277
21.8.8	LTM Egress Identifier TLV	1277
21.9	LTR format	1277
21.9.1	Flags	1277
21.9.2	First TLV Offset	1278
21.9.3	LTR Transaction Identifier	1278
21.9.4	Reply TTL	1278
21.9.5	Relay Action	1279
21.9.6	Additional LTR TLVs	1279
21.9.7	LTR Egress Identifier TLV	1279
21.9.8	Reply Ingress TLV	1280
21.9.9	Reply Egress TLV	1281
22.	CFM in systems	1283
22.1	CFM shims in Bridges	1283
22.1.1	Preliminary positioning of MPs	1283
22.1.2	CFM and the Forwarding Process	1284
22.1.3	Up/Down separation of MPs	1286
22.1.4	Service instances over multiple Bridges	1288
22.1.5	Multiple VID service instances	1290
22.1.6	Untagged CFM PDUs	1290
22.1.7	MPs and non-VLAN-aware Bridges	1290
22.1.8	MPs and other standards	1291
22.1.9	CFM and IEEE 802.3 OAM	1293
22.2	Maintenance Entity creation	1293
22.2.1	Creating Maintenance Domains and MAs	1294
22.2.2	Creating MEPs	1294
22.2.3	Creating MIPs	1296
22.2.4	CFM configuration errors	1297
