

Implementation of  
ISO/IEC TR 13561:1994

# Information technology — Guidelines for effective use of optical disk cartridges conforming to ISO/IEC 10090

# Committees responsible for this British Standard

The preparation of this British Standard was entrusted to Technical Committee IST/4, Magnetic and optical media for digital data interchange, upon which the following bodies were represented:

- British Computer Society
- Institute of Quality Assurance
- Institution of Electrical Engineers
- International Computers Limited
- Kodak Limited
- Coopted member

This British Standard, having been prepared under the direction of the Information Systems Technology Assembly, was published under the authority of the Standards Board and comes into effect on 15 July 1995

## National foreword

This British Standard reproduces verbatim ISO/IEC TR 13561:1994 and implements it as the UK national standard.

This British Standard is published under the direction of the Information Systems Technology Assembly whose Technical Committee IST/4 has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international committee any enquiries on interpretation, or proposals for change, and keep UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

NOTE International and European Standards, as well as overseas standards, are available from Customer Services, BSI, 389 Chiswick High Road, London W4 4AL.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

**Compliance with a British Standard does not of itself confer immunity from legal obligations.**

### Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ISO/IEC TR title page, pages ii to iv, pages 1 to 15 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

| 3 Abbreviations                                                                                                               | 1    |
| 4 Judgement for each item                                                                                                     | 1    |
| 4.1 Functional Areas                                                                                                          | 2    |
| 4.2 Control Zone information                                                                                                  | 2    |
| 4.3 Number and location of erroneous sector in the DMA                                                                        | 2    |
| 4.3.1 Check DMA just after having made a new DMA, in Case A (11)                                                              | 2    |
| 4.3.2 Check DMA before reading/writing the data in user zone just after loading the disk into the drive, in Case B (4 and 17) | 3    |
| 4.3.3 Check a DMA after updating the SDL, in Case B (10, 14, and 23)                                                          | 3    |
| 4.4 Number of bad sectors in the Rewritable Zone                                                                              | 3    |
| 4.5 DDS information                                                                                                           | 3    |
| 5 The recommendation for the procedure of making a DMA                                                                        | 3    |
| 5.1 The contents of each DMA just after the certification                                                                     | 3    |
| 5.2 The usage of the old PDL and SDL which are already recorded in the case of re-initialization                              | 4    |
| 5.3 Recommendation for the order of erasing/writing a sector in the DMA                                                       | 4    |
| 5.3.1 The order of erasing/writing sectors in the DMA duaring initialization or re-initialization                             | 4    |
| 5.3.2 The order of erasing/writing sectors in the DMA when updating the SDL                                                   | 4    |
| 6 Recommendation for sector replacement                                                                                       | 5    |
| 6.1 Handling when the number of bad sectors exceeds the number of replacement sectors in a group during certification         | 5    |
| 6.2 Handling when the number of bad sectors exceeds the number of replacement sectors in a Group, during write mode           | 5    |
| 6.3 Order for the usage of the spare area                                                                                     | 5    |
| 6.4 The number of replacement chaining                                                                                        | 5    |
| 6.5 Sector replacement in the DMA                                                                                             | 6    |
| 6.6 Reassign during read mode                                                                                                 | 6    |
| 7 Write condition at rotational speed other than 30 Hz                                                                        | 6    |
| 8 Recommendation for Partially Embossed disks                                                                                 | 6    |

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The main task of technical committees is to prepare International Standard, but in exceptional circumstances a technical committee may propose the publication of a Technical Report of one of the following types:

- type 1, when the required support cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development or where for any other reason there is the future but not immediate possibility of an agreement on an International Standard;
- type 3, when a technical committee has collected data of a different kind from that which is normally published as an International Standard (“state of the art”, for example)

Technical Reports of type 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into International Standards. Technical Reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

ISO/IEC TR 13561, which is a Technical Report of type 3, was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 23, *Optical disk cartridges for information interchange*.
