

Information technology — Software engineering — Guidelines for the adoption of CASE tools

ICS 35.080

National foreword

This British Standard reproduces verbatim ISO/IEC TR 14471:1999 and implements it as the UK national standard.

The UK participation in its preparation was entrusted to Technical Committee IST/15, Software Engineering, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the BSI Standards Catalogue under the section entitled “International Standards Correspondence Index”, or by using the “Find” facility of the BSI Standards Electronic Catalogue.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the ISO/IEC TR title page, pages ii to v, a blank page, pages 1 to 19 and a back cover.

The BSI copyright notice displayed in this document indicates when the document was last issued.

This British Standard, having been prepared under the direction of the DISC Board, was published under the authority of the Standards Committee and comes into effect on 15 October 1999

Information technology — Software engineering — Guidelines for the adoption of CASE tools

*Technologies de l'information — Ingénierie du logiciel — Lignes directrices
pour l'adoption d'outils CASE*

Contents

1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Symbols and abbreviated terms	2
5 Critical success factors for adoption	2
6 Overview of CASE adoption	3
6.1 Preparation process	3
6.2 Evaluation and selection process	4
6.3 Pilot project process	4
6.4 Transition process	5
7 Preparation process	5
7.1 Setting goals	6
7.2 Verifying feasibility and measurability	6
7.3 Setting policy	7
7.4 Developing a plan	7
8 Evaluation and selection process	7
9 Pilot project process	8
9.1 Pilot initiation	9
9.2 Pilot performance	10
9.3 Pilot evaluation	11
9.4 Decision for a next step	11
10 Transition process	12
10.1 Initiation for transition	13
10.2 Training	14

10.3 Transition to routine use.....	14
10.3.1 Institutionalization	14
10.3.2 Monitoring and continuous support.....	14
10.4 Evaluation of adoption project and completion	15
Annex A (informative) Analysis of CASE Adoption questionnaire	16
Annex B (informative) Cross reference for adoption process and critical success factors.....	18

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The main task of technical committees is to prepare International Standards, but in exceptional circumstances a technical committee may propose the publication of a Technical Report of one of the following types:

- type 1, when the required support cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development or where for any other reason there is the future but not immediate possibility of an agreement on an International Standard;
- type 3, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example).

Technical Reports of types 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into International Standards. Technical Reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

ISO/IEC TR 14471, which is a Technical Report of type 2, was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 7, *Software engineering*.

Annexes A and B of this Technical Report are for information only.

Introduction

Historically, there have been problems experienced by organizations in adopting CASE tools. Because organizations have not gained the expected benefits of CASE technology, it is hoped that the use of a well-founded CASE adoption process will help achieve successful adoption of CASE tools.

A survey conducted by ISO/IEC JTC 1/SC 7/WG 4 offers some hope that these problems may be improving. This survey suggests that CASE tools are performing new capabilities and getting easier to use, that users' expectations are getting more sophisticated, and that CASE tools are more likely to meet their goals. However, according to the survey, there remain a number of continuing problems. There has not been sufficient attention given to pilot trials of CASE technology before using it on actual projects, and users report a need for additional top management support, a total process for CASE adoption, and a preparation of the organization for the introduction of the technology. This Technical Report addresses the continued needs reported by users.

The purpose of this Technical Report is to provide a recommended practice for CASE adoption. It provides guidance in establishing processes and activities that are to be applied for the successful adoption of CASE technology. The use of this Technical Report will help to maximize the return and minimize the risk of investing in CASE technology. However, this Technical Report does not establish compliance criteria.

Information technology — Software engineering — Guidelines for the adoption of CASE tools

1 Scope

Since CASE adoption is a subject of the broader technology transition problem, this Technical Report addresses the adoption practices appropriate for a wide range of computing organizations. Also, this Technical Report neither dictates nor advocates particular development standards, software processes, design methods, methodologies, techniques, programming languages, or life-cycle paradigms.

This Technical Report will:

- identify critical success factors,
- propose a set of adoption processes,
- guide successful adoption in consideration of organizational and cultural environment.

The following groups are targeted as potential audiences:

- CASE users
- information systems managers
- chief information officers (CIO)
- CASE suppliers
- software engineering consultants
- those involved in the acquisition of CASE tools and technology

This Technical Report addresses aspects of product evaluation, selection, and adoption which are specific to CASE tools. It is complementary to related ISO/IEC documents which deal with the general aspects of these topics.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this Technical Report. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this Technical Report are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO/IEC 9126:1991, *Information technology — Software product evaluation — Quality characteristics and guidelines for their use*.

ISO/IEC 12207:1995, *Information technology — Software life cycle processes*.

ISO/IEC 14102:1995, *Information technology — Guideline for the evaluation and selection of CASE tools*.
