MARINE DIVISION

GENERAL CONDITIONS

ARTICLE 1

1.1. - BUREAU VERITAS is a Society the purpose of whose Marine Division (the "Society") is the classification ("Classification") of any ship or vessel or structure of any type or part of it or system therein collectively hereinafter referred to as a "Unit" whether linked to shore, river bed or sea bed or not, whether operated or located at sea or in inland waters or partly on land, including submarines, hovercrafts, drilling rigs, offshore installations of any type and of any purpose, their related and ancillary equipment, subsea or not, such as well head and pipelines, mooring legs and mooring points or otherwise as decided by the Society.

The Society:

- prepares and publishes Rules for classification, Guidance Notes and other documents ("Rules");
- issues Certificates, Attestations and Reports following its interventions ("Certificates");
- publishes Registers.

1.2. - The Society also participates in the application of National and International Regulations or Standards, in particular by delegation from different Governments. Those activities are hereafter collectively referred to as "Certification".

1.3. - The Society can also provide services related to Classification and Certification such as ship and company safety management certification; ship and port security certification, training activities; all activities and duties incidental thereto such as documentation on any supporting means, software, instrumentation, measurements, tests and trials on board.

1.4. - The interventions mentioned in 1.1., 1.2. and 1.3. are referred to as "Services". The party and/or its representative requesting the services is hereinafter referred to as the "Client". **The Services are prepared and carried out on the assumption that the Clients are aware of the International Maritime and/or Offshore Industry (the "Industry") practices.**

1.5. - The Society is neither and may not be considered as an Underwriter, Broker in ship's sale or chartering, Expert in Unit's valuation, Consulting Engineer, Controller, Naval Architect, Manufacturer, Shipbuilder, Repair yard, Charterer or Shipowner who are not relieved of any of their expressed or implied obligations by the interventions of the Society.

ARTICLE 2

2.1. - Classification is the appraisal given by the Society for its Client, at a certain date, following surveys by its Surveyors along the lines specified in Articles 3 and 4 hereafter on the level of compliance of a Unit to its Rules or part of them. This appraisal is represented by a class entered on the Certificates and periodically transcribed in the Society's Register.

2.2. - Certification is carried out by the Society along the same lines as set out in Articles 3 and 4 hereafter and with reference to the applicable National and International Regulations or Standards.

2.3. - It is incumbent upon the Client to maintain the condition of the Unit after surveys, to present the Unit for surveys and to inform the Society without delay of circumstances which may affect the given appraisal or cause to modify its scope.

2.4. - The Client is to give to the Society all access and information necessary for the safe and efficient performance of the requested Services. The Client is the sole responsible for the conditions of presentation of the Unit for tests, trials and surveys and the conditions under which tests and trials are carried out.

ARTICLE 3

3.1. - The Rules, procedures and instructions of the Society take into account at the date of their preparation the state of currently available and proven technical knowledge of the Industry. They are not a standard or a code of construction neither a guide for maintenance, a safety handbook or a guide of professional practices, all of which are assumed to be known in detail and carefully followed at all times by the Client.

Committees consisting of personalities from the Industry contribute to the development of those documents.

3.2. - The Society only is qualified to apply its Rules and to interpret them. Any reference to them has no effect unless it involves the Society's intervention.

3.3. - The Services of the Society are carried out by professional Surveyors according to the applicable Rules and to the Code of Ethics of the Society. Surveyors have authority to decide locally on matters related to classification and certification of the Units, unless the Rules provide otherwise.

3.4. - The operations of the Society in providing its Services are exclusively conducted by way of random inspections and do not in any circumstances involve monitoring or exhaustive verification.

ARTICLE 4

4.1. - The Society, acting by reference to its Rules:

- reviews the construction arrangements of the Units as shown on the documents presented by the Client;
- conducts surveys at the place of their construction;
- classes Units and enters their class in its Register;
- surveys periodically the Units in service to note that the requirements for the maintenance of class are met.

The Client is to inform the Society without delay of circumstances which may cause the date or the extent of the surveys to be changed.

ARTICLE 5

5.1. - The Society acts as a provider of services. This cannot be construed as an obligation bearing on the Society to obtain a result or as a warranty.

5.2. - The certificates issued by the Society pursuant to 5.1. here above are a statement on the level of compliance of the Unit to its Rules or to the documents of reference for the Services provided for.

In particular, the Society does not engage in any work relating to the design, building, production or repair checks, neither in the operation of the Units or in their trade, neither in any advisory services, and cannot be held liable on those accounts. Its certificates cannot be construed as an implied or express warranty of safety, fitness for the purpose, seaworthiness of the Unit or of its value for sale, insurance or chartering.

5.3. - The Society does not declare the acceptance or commissioning of a Unit, nor of its construction in conformity with its design, that being the exclusive responsibility of its owner or builder, respectively.

5.4. - The Services of the Society cannot create any obligation bearing on the Society or constitute any warranty of proper operation, beyond any representation set forth in the Rules, of any Unit, equipment or machinery, computer software of any sort or other comparable concepts that has been subject to any survey by the Society.

ARTICLE 6

6.1. - The Society accepts no responsibility for the use of information related to its Services which was not provided for the purpose by the Society or with its assistance.

6.2. - If the Services of the Society cause to the Client a damage which is proved to be the direct and reasonably foreseeable consequence of an error or omission of the Society, its liability towards the Client is limited to ten times the amount of fee paid for the Service having caused the damage, provided however that this limit shall be subject to a minimum of eight thousand (8,000) Euro, and to a maximum which is the greater of eight hundred thousand (800,000) Euro and one and a half times the above mentioned fee.

The Society bears no liability for indirect or consequential loss such as e.g. loss of revenue, loss of profit, loss of production, loss relative to other contracts and indemnities for termination of other agreements.

6.3. - All claims are to be presented to the Society in writing within three months of the date when the Services were supplied or (if later) the date when the events which are relied on were first known to the Client, and any claim which is not so presented shall be deemed waived and absolutely barred. Time is to be interrupted thereafter with the same periodicity.

ARTICLE 7

7.1. - Requests for Services are to be in writing.

7.2. - Either the Client or the Society can terminate as of right the requested Services after giving the other party thirty days' written notice, for convenience, and without prejudice to the provisions in Article 8 hereunder.

7.3. - The class granted to the concerned Units and the previously issued certificates remain valid until the date of effect of the notice issued according to 7.2. here above subject to compliance with 2.3. here above and Article 8 hereunder.

7.4. - The contract for classification and/or certification of a Unit cannot be transferred neither assigned.

ARTICLE 8

8.1. - The Services of the Society, whether completed or not, involve, for the part carried out, the payment of fee upon receipt of the invoice and the reimbursement of the expenses incurred.

8.2. Overdue amounts are increased as of right by interest in accordance with the applicable legislation.

8.3. - The class of a Unit may be suspended in the event of non-payment of fee after a first unfruitful notification to pay.

ARTICLE 9

9.1. - The documents and data provided to or prepared by the Society for its Services, and the information available to the Society, are treated as confidential. However:

- clients have access to the data they have provided to the Society and, during the period of classification of the Unit for them, to the **classification file** consisting of survey reports and certificates which have been prepared at any time by the Society for the classification of the Unit;
- copy of the documents made available for the classification of the Unit and of available survey reports can be handed over to another Classification Society, where appropriate, in case of the Unit's transfer of class;
- the data relative to the evolution of the Register, to the class suspension and to the survey status of the Units, as well as general technical information related to hull and equipment damages, are passed on to IACS (International Association of Classification Societies) according to the association working rules;
- the certificates, documents and information relative to the Units classed with the Society may be reviewed during certifying bodies audits and are disclosed upon order of the concerned governmental or inter-governmental authorities or of a Court having jurisdiction.

The documents and data are subject to a file management plan.

ARTICLE 10

10.1. - Any delay or shortcoming in the performance of its Services by the Society arising from an event not reasonably foreseeable by or beyond the control of the Society shall be deemed not to be a breach of contract.

ARTICLE 11

11.1. - In case of diverging opinions during surveys between the Client and the Society's surveyor, the Society may designate another of its surveyors at the request of the Client.

11.2. - Disagreements of a technical nature between the Client and the Society can be submitted by the Society to the advice of its Marine Advisory Committee.

ARTICLE 12

12.1. - Disputes over the Services carried out by delegation of Governments are assessed within the framework of the applicable agreements with the States, international Conventions and national rules.

12.2. - Disputes arising out of the payment of the Society's invoices by the Client are submitted to the Court of Nanterre, France.

12.3. - Other disputes over the present General Conditions or over the Services of the Society are exclusively submitted to arbitration, by three arbitrators, in London according to the Arbitration Act 1996 or any statutory modification or re-enactment thereof. The contract between the Society and the Client shall be governed by English law.

ARTICLE 13

13.1. - These General Conditions constitute the sole contractual obligations binding together the Society and the Client, to the exclusion of all other representation, statements, terms, conditions whether express or implied. They may be varied in writing by mutual agreement.

13.2. - The invalidity of one or more stipulations of the present General Conditions does not affect the validity of the remaining provisions.

13.3. - The definitions herein take precedence over any definitions serving the same purpose which may appear in other documents issued by the Society.

RULES FOR THE CLASSIFICATION AND THE CERTIFICATION OF YACHTS

- Part A Classification and Surveys**
- Part B Hull and Stability**
- Part C Machinery, Electricity, Automation
and Fire Protection**

March 2012

The English wording of these rules take precedence over editions in other languages.

Unless otherwise specified, Part A of these rules apply on March 1st, 2012. The Society may refer to the contents hereof before March 1st, 2012, as and when deemed necessary or appropriate.

Unless otherwise specified, Parts B and C of these rules apply to ships for which contracts are signed after March 1st, 2012. The Society may refer to the contents hereof before March 1st, 2012, as and when deemed necessary or appropriate.

PART A **CLASSIFICATION AND SURVEYS**

PART A, CHAPTER 1 **GENERAL**

Section 1 Application

1	General	49
1.1	Application	
1.2	Special consideration	
2	National and International Regulations	49
2.1	General	
3	Rules cumulative effects	50
3.1	Application	

Section 2 General Requirements and Definitions

1	Content of Rules	52
1.1	Summary table	
1.2	Other Regulations	
2	Definitions	52
2.1	Definitions used in the present Rules	
2.2	Definitions used in the International Rules	

Section 3 Classification and Surveys

1	Principles of classification	54
1.1	Meaning of classification, scope and limits	
2	Classification notations	54
2.1	General	
2.2	Class symbols and construction mark	
2.3	Service notations	
2.4	Navigation notation	
2.5	Additional class notations	
3	Certificate of Classification	55
3.1	Issue of Certificate of Classification	
4	Principles of surveys for the maintenance of class	55
4.1	General	
4.2	Class renewal survey	
4.3	Bottom survey	

Section 4 **Certification**

1	EC Certification	56
1.1	General	
1.2	Application	
1.3	EC Certificate	
2	Certification under Society survey scheme	57
2.1	General	

PART B HULL AND STABILITY

PART B, CHAPTER 1 GENERAL

Section 1 Application and Flow Chart

1	General requirements	63
1.1	Wording	
1.2	General structural requirements	
1.3	Materials	
1.4	Rounding off of scantlings	
1.5	Limits of application to lifting appliances connections	
2	Rule application	63
2.1	General principles	
3	Flow chart	63
3.1	Design review process	

Section 2 Symbols and Definitions

1	Units	66
1.1	Units definition	
1.2	Reference co-ordinate system	
2	Definitions	66
2.1	Moulded base line	
2.2	Length	
2.3	Ends of rule length and midship	
2.4	Breadth	
2.5	Depth	
2.6	Draught	
2.7	Lightweight	
2.8	Deadweight	
2.9	Wave characteristics	
2.10	Design vertical acceleration	
2.11	Freeboard deck(m)	
2.12	Bulkhead deck	
2.13	Superstructure	
2.14	Superstructure deck	
3	Symbols	67
3.1	Main symbols	

Section 3 Documentation to be Submitted

1	Documentation to be submitted	68
1.1	Yachts surveyed by the Society during the construction	
1.2	Yachts for which the Society acts on behalf of the relevant Administration	
1.3	Yachts reviewed for E.C. certification	
1.4	Yachts certified under alternative survey scheme for production in large series	

PART B, CHAPTER 2

GENERAL ARRANGEMENT DESIGN

Section 1 Structure Arrangement Principle

1	Structural continuity of hull girder	73
1.1	General principles for longitudinal hull girder	
1.2	General principles for cross deck of catamaran	
2	Local structure	73
2.1	General principles	

Section 2 Subdivision Arrangement

1	General	74
1.1	Definition	
2	Number and arrangement of transverse watertight bulkheads	74
2.1	Number of watertight bulkheads	
3	Collision bulkhead	74
3.1	General	
4	After peak and machinery space bulkheads	75
4.1	General	
5	Stern tubes and fin shaft stabilizer	75
5.1	General arrangement	
6	Compartment with access on hull	75
6.1	General	
7	Openings in watertight bulkheads and decks	75
7.1	General	
7.2	Watertight doors	

Section 3 Integrity and Opening in Hull

1	General	76
1.1	General	
2	Interpretation principle	76
2.1	General	
2.2	Definitions and interpretations	
3	General arrangement design, height of sills and coamings	77
3.1	Doorways and companionways	
3.2	Hatchways	
3.3	Ventilation openings	

4	Scantlings of doors, hatch covers, superstructure windows and side scuttles	78
4.1	General	
5	Freing ports	78
5.1	Freeing ports	

PART B, CHAPTER 3

STABILITY

Section 1 General Requirements

1	General	83
1.1	Application	
2	Examination procedure	83
2.1	Documents to be submitted	
2.2	Inclining experiment/lightweight check	

Section 2 Intact Stability

1	General	85
1.1	Information to the Master	
1.2	Permanent ballast	
2	Design criteria for all type of yachts	85
2.1	General intact stability criteria	
3	Severe wind and rolling criterion (weather criterion)	85
3.1	Weather criterion for motor yachts and sailing yachts with lowered sails	
3.2	Weather criterion for sailing yachts	
4	Effects of free surfaces of liquids in tanks	88
4.1	General	
4.2	Consideration of free surface effects	
4.3	Water ballast tanks	
4.4	GM0 and GZ curve corrections	
4.5	Remainder of liquid	
5	Icing	88
5.1	Application	
5.2	Calculation assumptions	
5.3	Guidance relating to ice accretion	

Section 3 Damage Stability

1	General	90
1.1	Application	
2	Assumptions	90
2.1	Description of the damage	
2.2	Method of calculation	
2.3	Permeabilities	
2.4	Inclining moment	
2.5	Damage stability criteria	

Appendix 1 Inclining Experiment and Weighing Test

1	Inclining experiment and lightweight check	92
1.1	General	

Appendix 2 Trim and Stability Booklet

1	Trim and stability booklet	94
1.1	Information to be included in the trim and stability booklet	
1.2	Loading conditions	
1.3	Stability curve calculation	

PART B, CHAPTER 4

DESIGN LOADS

Section 1 General

1	Application criteria	99
1.1	Fields of application	
2	Global hull girder loads	99
2.1	General	
2.2	Still water and wave loads	
2.3	Digging in wave loads for catamaran	
2.4	Global rigging loads	
2.5	Sign conventions of vertical bending moments and shear forces	
3	Local loads	101
3.1	Type of loads	
4	Navigation coefficients	101
4.1	General	

Section 2 Global Hull Girder Loads

1	Still water loads	102
1.1	Longitudinal bending moments and shear forces	
2	Wave loads	102
2.1	General	
2.2	Head sea condition	
2.3	Quartering sea condition for catamaran	
3	Digging in wave loading	104
3.1	Loads and distribution	
4	Rig loads	105
4.1	Sailing monohull with one mast	
4.2	Sailing monohull with several masts	
4.3	Sailing catamarans with one mast or more than one mast	
5	Combination of global loads	108
5.1	Combination	

Section 3 Local Loads on Bottom and Side Shell

1	Definition and application	109
1.1	General	
1.2	Definition and application	
2	Wave loads on bottom and side shell	109
2.1	Wave loads calculation	

3	Dynamic loads	110
3.1	General	
3.2	Dynamic load factors	
3.3	Bottom Slamming	
3.4	Side shell and cross deck impacts	
4	Design vertical accelerations	113
4.1	Application	
4.2	Design vertical acceleration for high speed motor yachts	
4.3	Design vertical acceleration for monohull sailing yacht	
4.4	Vertical acceleration for slow speed motor yacht and Sailing yacht - multihulls	

Section 4 Local Loads on Decks, Superstructures, Watertight Bulkheads and Tanks

1	Local loads on decks	117
1.1	Exposed decks	
1.2	Accommodation decks	
2	Local loads on superstructures	117
2.1	Sea pressure on superstructure decks	
2.2	Sea pressure on superstructure walls	
3	Pressure in tanks	118
3.1	General	
4	Pressure on bulkheads	119
4.1	General	

PART B, CHAPTER 5
STRUCTURE DESIGN AND CALCULATION
PRINCIPLES FOR STEEL AND ALUMINIUM

Section 1 General requirements and Characteristics of Materials

1	General requirements	123
1.1	Application	
1.2	Local and global hull strength analysis	
2	Characteristics of materials	123
2.1	Steel materials	
2.2	Aluminium alloys	

Section 2 Global Strength Analysis of Hull Girder and Cross Deck of Catamarans

1	General	124
1.1	Application	
2	Longitudinal strength characteristics of hull girder - Monohull yacht	124
2.1	General	
2.2	Strength characteristics	
2.3	Overall longitudinal bending stress	
3	Global strength of catamaran (longitudinal and transverse)	125
3.1	General	
3.2	Global strength of superstructure platform catamaran	
3.3	Model loading	
3.4	Main structure check	

Section 3 Buckling Analysis of Plating

1	General	129
1.1	Material	
1.2	Application	
2	Critical stress under buckling	129
2.1	General	
2.2	Loading principles	
2.3	Critical stresses	
3	Buckling check criteria	131
3.1	Safety factors	

Section 4 Geometric Properties, Arrangement and Buckling Analysis of Stiffener

1	General	132
1.1	Materials	
2	Calculation principles for secondary supporting members	132
2.1	General	
2.2	Recommended dimensions of steel ordinary stiffeners	
2.3	Span of stiffener	
3	Primary stiffeners	133
3.1	Scantling	
3.2	Cut-outs and large openings	
3.3	Web stiffening arrangement for primary supporting members	
4	Axial buckling check	136
4.1	Critical stress	
5	Buckling check criteria for steel and aluminium stiffeners	137
5.1	Checking criteria	

Section 5 Structural Arrangement and Special Features

1	General	138
1.1	Application	
2	Bottom structure arrangement	138
2.1	General arrangement	
2.2	Longitudinal framing arrangement of single bottom	
2.3	Transverse framing arrangement of single bottom	
2.4	Double bottom arrangement	
2.5	Arrangement, scantlings and connections of bilge keels	
2.6	Additional requirements for bottom arrangement in way of bulb keel of sailing yacht	
3	Side structure arrangement	140
3.1	General	
3.2	Stiffener arrangement	
3.3	Openings in the side shell plating	
3.4	Additional requirements for side shell plating in way of chain plates of sailing yachts	
4	Deck structure arrangements	140
4.1	General	
4.2	Stiffeners arrangements	
4.3	Opening arrangements	
4.4	Pillars arrangement under deck	
4.5	Additional requirements for deck structure in way of mast of sailing yacht	
5	Bulkhead structure arrangements	141
5.1	General	
5.2	Watertight bulkheads	
5.3	Non-tight bulkheads	
5.4	Bulkhead acting as pillars	
5.5	Bracketed stiffeners	

6	Superstructure and deckhouse structure arrangements	142
6.1	Connection of superstructures and deckhouses with the hull structure	
6.2	Structural arrangement of superstructures and deckhouses	
6.3	Strengthening of deckhouse in way of tenders and liferafts	
7	Helicopter deck and platform	143
7.1	General	
8	Special features	143
8.1	Water jet propulsion tunnel	
8.2	Foils and trim tab supports	
8.3	Lifting appliances	
8.4	Strengthening for ice navigation	

Section 6 Joint Design and Weld Scantling for Steel and Aluminium

1	General	144
1.1	Materials	
1.2	Application	
1.3	Weld and welding booklet	
2	Scantling of welds	144
2.1	Butt welds	
2.2	Butt welds on permanent backing	
2.3	Fillet weld on a lap-joint	
2.4	Slot welds	
2.5	Plug welding	
2.6	Fillet weld	
3	Typical joint preparation	148
3.1	General	
3.2	Butt welding	
3.3	Fillet weld	
4	Plate misalignment	150
4.1	Misalignment in butt weld	
4.2	Misalignment in cruciform connections	

Section 7 Hull Construction and Survey for Steel and Aluminium

1	General	151
1.1	Scope	
2	Structure drawing examination	151
2.1	General	
3	Hull construction	151
3.1	Shipyard details and procedures	
3.2	Materials	
3.3	Forming	
3.4	Welding	
3.5	Inspection and check	
3.6	Modifications and repairs during construction	

4	Survey for unit production	155
4.1	General	
5	Alternative survey scheme for production in large series	155
5.1	General	
5.2	Type approval	
5.3	Quality system documentation	
5.4	Manufacturing, testing and inspection plan (MTI plan)	
5.5	Society's certificate	

PART B, CHAPTER 6
SCANTLING REQUIREMENTS FOR
STEEL AND ALUMINIUM

Section 1 Rule Admissible Stresses and Safety Coefficients

1	Application	159
1.1	General	
2	General	159
2.1	Characteristics of materials	
2.2	Rule scantling criteria	
3	Stress notations	159
3.1	General	
4	Steel structures	159
4.1	Admissible stresses	
5	Aluminium alloys	160
5.1	Admissible stresses	

Section 2 Hull Girder and Cross Deck Scantling

1	General	161
1.1	Application	
2	Hull girder of monohull and floats of catamaran	161
2.1	Rule scantling criteria	
3	Cross deck of catamaran	161
3.1	Rule scantling criteria	

Section 3 Plating, Ordinary and Primary Stiffener Local Scantling

1	General	162
1.1	Materials	
1.2	Local scantling consideration	
1.3	Local load point location	
2	Plating scantling	162
2.1	General	
2.2	Plating scantling	
3	Secondary stiffener scantling	163
3.1	General	
3.2	Secondary stiffener scantling	
4	Primary stiffener scantling	164
4.1	General	
4.2	Primary stiffener scantling	

Section 4 Stiffener Brackets Scantling

1	General arrangement of brackets	165
1.1	Materials	
1.2	General requirements	
2	Bracket for connection of perpendicular stiffeners	165
2.1	General arrangement	
3	Brackets ensuring continuity of secondary stiffeners	167
3.1		
4	Bracketless end stiffeners connections	167
4.1	Bracketless end connections	
4.2	Other type of end connection	

Section 5 Pillar Scantling

1	General	169
1.1	Materials	
1.2	Application	
2	Critical buckling stresses	170
2.1	Buckling of pillars subjected to compression axial load	

PART B, CHAPTER 7
STRUCTURE DESIGN AND SCANTLING
REQUIREMENTS FOR COMPOSITE AND PLYWOOD

Section 1 General requirements

1	General	173
1.1	Application	
2	Local and global hull strength analysis	173
2.1	Local scantling analysis	
2.2	Global strength analysis	

Section 2 Calculation Principles for Laminate Panel

1	General principles	174
1.1		
2	Analysis of laminate panel sustaining local loads	174
2.1	General	
3	Analysis of laminate panel sustaining global loads	174
3.1	General	

Section 3 Calculation and General Arrangement Principles for Stiffeners

1	General principles	176
1.1		
2	General arrangement of stiffeners	176
2.1	General	
2.2	Ordinary stiffeners	
2.3	Primary stiffeners	
2.4	Connections between stiffeners	
3	Analysis of stiffener sustaining local loads	177
3.1	General	
3.2	Load types	
3.3	Stiffener analysis	
4	Analysis of stiffeners sustaining global loads	177
4.1	General	

Section 4 Stresses and Safety Coefficient

1	Composite structure	179
1.1	Principle of design review	
1.2	Types of stress considered	
1.3	Theoretical breaking criteria	
1.4	Minimum rule safety Coefficients	
2	Plywood structure	180
2.1	Principle of design review	
2.2	Minimum rule safety coefficients	

Section 5 Hull Girder and Cross Deck Scantling

1	General	182
1.1	Application	
2	Hull girder of monohull and floats of catamaran	182
2.1	Rule scantling criteria	
3	Cross deck of catamaran	182
3.1	Rule scantling criteria	

Section 6 Local Scantling of Plating, Ordinary and Primary Stiffener and Pillars

1	General	183
1.1	Local scantling considerations	
1.2	Local load point location	
2	Plating scantling	183
2.1	General	
2.2	Scantling of laminate made of composite	
2.3	Scantling of plating made in plywood	
3	Ordinary stiffener scantling	184
3.1	General	
3.2	Ordinary stiffener made of composite	
3.3	Ordinary stiffeners made in plywood	
4	Primary stiffener scantling	184
4.1	General	
4.2	Curvate primary stiffener	
4.3	Primary stiffeners scantling	
5	Pillars	185
5.1	Pillar scantling	

Section 7 Main Structure Arrangements and Special Features

1	General	186
1.1	Application	
2	Additional requirements for bottom structure arrangements	186
2.1	Charter yacht carrying more than 12 passengers	
2.2	Bottom structure in way of bulb keel of sailing yacht	
3	Additional requirements for side structure arrangements	186
3.1	Side shell structure in way of sailing yacht chainplates	
4	Additional requirements for deck structure arrangements	186
4.1	Deck structure in way of mast of sailing yacht	
5	Additional requirements for bulkhead structure arrangements	186
5.1	General	
6	Additional requirements for superstructures arrangements	187
6.1	Openings	
6.2	Strengthening of deckhouse in way of tenders and liferafts	
7	Helicopter deck and platform	187
7.1	General	

PART B, CHAPTER 8
HULL OUTFITTERS

Section 1 Equipment in Anchors and Chain Cables

1	General	191
1.1	Design assumptions for anchoring equipment	
2	Anchoring equipment calculation	191
2.1	General	
2.2	Anchor mooring force calculation for monohull	
2.3	Anchor mooring force calculation for catamaran	
3	Equipment in chain and anchor	193
3.1	Anchors	
3.2	Chain cables	
3.3	Synthetic fibre ropes	
4	Shipboard fittings for anchoring equipment	195
4.1	Windlass and chain stopper	
4.2	Chain locker	
4.3	Anchoring sea trials	
5	Shipboard fitting for towing and mooring	196
5.1	General	

Section 2 Rudder Stock and Rudder Blade

1	General	197
1.1	Application	
1.2	Arrangement	
1.3	Documents to be submitted	
1.4	Materials	
2	Pressure acting on the rudder	198
2.1	Rudder blade without cut-outs	
2.2	Rudder blade with cut-outs (semi-spade rudders)	
3	Torque moment on rudder	199
3.1	Rudder blade without cut-outs	
3.2	Rudder blade with cut-outs	
4	Rudder types, relevant loads, bending moments and forces acting on the rudder structure for direct calculations	200
4.1	General	
4.2	Rudder type 1	
4.3	Rudder type 5	
4.4	Rudder type 6	
4.5	Rudder type 7	

5	Rudder stock scantlings	202
5.1	General	
5.2	Metallic rudder stock	
5.3	Composite rudder stock	
5.4	Admissible stresses and safety coefficient	
6	Pintle scantling	204
6.1	Pintles	
7	Rudder blade scantlings	204
7.1	General	
7.2	Metallic rudder blade	
7.3	Composite rudder blade	
8	Couplings between rudder stock and rudder blade	206
8.1	General	
8.2	Coupling for metallic rudder	
8.3	Coupling for composite rudder	
8.4	Coupling between metallic rudder stock and composite rudder blade	
9	Rudder stock and pintle bearings	208
9.1	Forces bearings	
9.2	Pressure on bearings	
10	Rudder horn and solepiece scantlings	208
10.1	General	
10.2	Metallic Rudder horn	
10.3	Metallic solepieces	
10.4	Rudder horn and solepiece made of composites	
11	Coupling between rudder stock and tillers or quadrants	210
11.1	Arrangement	
11.2	Coupling made by key	
11.3	Cone coupling on steel rudder stock	
11.4	Other coupling systems	

Section 3 Windows and Sidescuttles

1	Sidescuttles and windows	212
1.1	General	
1.2	National and International regulation	
1.3	Materials	
1.4	Scantling	

Section 4 Propeller Shaft Brackets

1	General	214
1.1	Propeller shaft bracket scantling	
1.2	Shaft bossing and arm connection to hull structure	

2	Loss of a blade	215
2.1	General	
2.2	Double arm propeller shaft brackets	
2.3	Single arm propeller shaft brackets	
3	Alternative calculation seizing	215
3.1	General	
3.2	Double arm propeller shaft brackets	
3.3	Single arm propeller shaft brackets	

Section 5 Independent Tanks

1	Independent tanks scantling	217
1.1	Application	
1.2	Local scantling	
2	Independent tank fitting in board	217
2.1	General	

Section 6 Standing Rigging Chainplates

1	General	218
1.1	Application	
2	Chainplates and local hull structure scantling	218
2.1	Design Loads	
2.2	Scantling criteria	
2.3	Scantling of chainplates	
2.4	Scantling of local hull structure in way of chainplates	
3	Forestay chainplate for catamaran	219
3.1	General	

Section 7 Solid Keel for Sailing Yachts

1	General	220
1.1	Application	
1.2	Materials	
2	Design Loads	220
2.1	Application	
2.2	Loads induced by heel	
2.3	Loads induced by pitch	
3	Solid keel scantling	221
3.1	General	

4	Hull bottom / keel connection	221
4.1	General	
4.2	Connection by welding	
4.3	Connection by bolting arrangement	
4.4	Connection for hull in composite materials	
4.5	Moveable keels	
5	Solid keel / bulb connection	222
5.1	General	
6	Allowable stresses and safety coefficients	222
6.1	Steel and aluminium	
6.2	Composite materials	
6.3	Bolt	

2	Internal combustion engines	231
2.1	General	
2.2	Installation	
2.3	Engine seating and fixing	
2.4	Starting systems	
2.5	Control, safety, monitoring and instrumentation	
3	Reduction gear - Transmission	237
3.1	General	
3.2	Design and construction	
4	Shafting	237
4.1	General	
4.2	Shafting scantling	
4.3	Shafting accessories	
5	Propeller	239
5.1	Scantling	
6	Shaft vibrations	240
6.1	General	
7	Shaft alignment	240
7.1	General	
8	Thrusters and waterjets	240
8.1	General	

Section 3 Steering Gear

1	General	241
1.1	Application	
1.2	Documentation to be submitted	
1.3	Definitions	
1.4	Symbols	
2	Design and construction - Requirements applicable to all yachts	243
2.1	Mechanical systems	
2.2	Hydraulic systems	
2.3	Electrical systems	
2.4	Control, monitoring and alarm systems	
3	Design and construction	248
3.1	General provisions	
3.2	Strength, performance and power operation of the steering gear	
3.3	Control of the steering gear	
3.4	Arrangement of main and auxiliary steering gear	
3.5	Autopilot	
4	Design and construction - Requirements for yachts equipped with several rudders	248
4.1	Principle	
4.2	Synchronisation	

5	Design and construction - Requirements for yachts equipped with thrusters as steering means	249
5.1	Principle	
5.2	Use of azimuth thrusters	
5.3	Use of water-jets	
6	Arrangement and installation	250
6.1	Steering gear room arrangement	
6.2	Rudder actuator installation	
6.3	Overload protections	
6.4	Means of communication	
6.5	Operating instructions	
7	Certification, inspection and testing	250
7.1	Type tests of hydraulic pumps	
7.2	Testing of materials	
7.3	Inspection and tests during manufacturing	
7.4	Inspection and tests after completion	

Section 4 Arrangement and Installation of Piping Systems

1	General	252
1.1	Application	
1.2	Documentation to be submitted	
1.3	Definitions	
1.4	Symbols and units	
1.5	Class of piping systems	
1.6	Materials	
2	Design of metallic piping systems	254
2.1	General	
2.2	Thickness of pressure piping	
2.3	Junction of metallic pipes	
2.4	Welding and bending of metallic piping	
3	Design of plastic piping systems	265
3.1	General	
3.2	Definitions	
3.3	Strength	
3.4	Fire safety characteristics	
3.5	Pipe and fitting connections	
3.6	Arrangement and installation of plastic pipes	
3.7	Certification	
4	Design of flexible piping systems	267
4.1	General	
4.2	Design	
5	Arrangement and installation of piping systems	268
5.1	General	
5.2	Protection against overpressure	
5.3	Flexible hoses and expansion joints	
5.4	Valves and accessories	
5.5	Control and monitoring	
5.6	Location of tanks and piping system components	

5.7	Passage through watertight bulkheads or decks	
5.8	Independence of lines	
5.9	Prevention of progressive flooding	
5.10	Provision for expansion	
5.11	Supporting of the pipes	
5.12	Protection of pipes	
5.13	Valves, accessories and fittings	
5.14	Additional arrangements for flammable fluids	
6	Certification, inspection and testing of piping systems	275
6.1	Application	
6.2	Type tests	
6.3	Testing of materials	
6.4	Hydrostatic testing of piping systems and their components	
6.5	Testing of piping system components during manufacturing	
6.6	Inspection and testing of piping systems	

Section 5 Bilge Systems

1	General	278
1.1	Applications	
1.2	Principle	
1.3	Materials and details	
2	Yacht or charter yacht of length less than 24 m	278
2.1	Application	
2.2	General provisions	
2.3	Bilge pumps	
2.4	Bilge piping	
3	Yacht or charter yacht equal to or over 24 m and less than 500 GT	279
3.1	Application	
3.2	General provisions	
3.3	Pumps and ejectors	
3.4	Individual pumps	
3.5	Size of bilge pipes	
3.6	Draining of dry spaces other than machinery spaces	
3.7	Arrangement of bilge lines and their accessories	
4	Yacht or charter yacht equal to or over 500 GT	282
4.1	Application	
4.2	Principle	
4.3	Bilge pumps	
5	Bilge pumping after flooding	282
5.1	Application	
5.2	Bilge pumping arrangements after flooding for yachts with $L \leq 85$ m	
5.3	Bilge pumping arrangements after flooding for yachts with $L > 85$ m	

Section 6 Scuppers and Discharges

1	General	283
1.1	Application	
1.2	Materials and details	
1.3	Principle	
1.4	Definitions	
2	Scuppers and discharge arrangements	283
2.1	General	
2.2	Self draining arrangements	
2.3	Drainage of vehicle spaces	
3	Hull integrity	284
3.1	Application	
3.2	Scuppers	
3.3	Discharges	
3.4	Specific arrangements	
3.5	Summary table of scupper and overboard discharge arrangements	

Section 7 Air, Sounding and Overflow Pipes

1	General	286
1.1	Application	
1.2	General arrangements	
2	Air pipes	286
2.1	Air pipe arrangements	
2.2	Hull integrity	
3	Sounding pipes	287
3.1	Sounding pipe arrangements	
4	Overflow pipes	288
4.1	Overflow pipe arrangements	

Section 8 Fuel Oil Systems

1	General	289
1.1	Applications	
1.2	Principle	
1.3	General arrangements	
2	Oil fuel system design	289
2.1	Application	
2.2	General provisions	
2.3	Oil fuel tank and bunkers	
2.4	Filling, venting and transfer pipes	
2.5	Oil fuel tanks and bunkers	
2.6	Oil fuel supply to engines	
2.7	Control and monitoring	

3	Yacht or charter yacht equal to or over 24 m and less than 500 GT	292
3.1	Application	
3.2	Principles	
4	Yacht or charter yacht over 500 GT	293
4.1	Application	
4.2	Arrangement of fuel oil tanks and bunkers	
4.3	Design of fuel supply systems	

Section 9 Other Systems

1	General	294
1.1	Application	
1.2	General arrangements	
2	Cooling systems	294
2.1	Application	
2.2	Principle	
2.3	Design of sea water cooling systems	
2.4	Design of fresh water cooling systems	
2.5	Arrangement of cooling systems	
3	Ballast systems	295
3.1	Applications	
3.2	Design of ballast systems	
3.3	Ballast pumping arrangement	
4	Lubricating oil systems	295
4.1	Application	
4.2	Principle	
4.3	Design of oil lubrication and oil control systems	
4.4	Design of lubricating oil tanks	
4.5	Control and monitoring	
4.6	Construction of lubricating oil piping systems	
5	Hydraulic systems	296
5.1	Application	
5.2	General	
5.3	General	
5.4	Design of hydraulic pumps and accessories	
5.5	Design of hydraulic tanks and other components	
5.6	Control and monitoring	
6	Compressed air systems	298
6.1	Application	
6.2	Principle	
6.3	Design of starting air systems	
6.4	Design of control and monitoring air systems	
6.5	Design of air compressor	
6.6	Control and monitoring of compressed air systems	
6.7	Arrangement of compressed air piping systems	

7	Exhaust gas systems	300
7.1	General	
7.2	Design of exhaust systems	
7.3	Arrangement of exhaust piping systems	
8	Ventilation	301
8.1	General	
8.2	Design of ventilation systems	
8.3	Arrangement of ventilation systems	
8.4	Gas consuming appliances	
8.5	First category fuel installation	

Section 10 Tests on Board

1	General	303
1.1	Application	
1.2	Purpose of shipboard tests	
1.3	Documentation to be submitted	
2	General requirements for shipboard tests	303
2.1	Trials at the moorings	
2.2	Sea trials	
3	Shipboard tests for machinery	303
3.1	Conditions of sea trials	
3.2	Navigation and manoeuvring tests	
3.3	Tests of diesel engines	
3.4	Tests of electric propulsion system	
3.5	Tests of gears	
3.6	Tests of main propulsion shafting and propellers	
3.7	Tests of piping systems	
3.8	Tests of steering gear	
4	Inspection of machinery after sea trials	307
4.1	General	
4.2	Diesel engines	

PART C, CHAPTER 2

ELECTRICAL INSTALLATIONS

Section 1 General Requirements

1	General	311
	1.1 Application	
	1.2 References to other regulations and standards	
2	Documentation to be submitted	311
	2.1	
3	Definitions	312
	3.1 General	
	3.2 Essential services	
	3.3 Low-voltage systems	
	3.4 Safety voltage	
	3.5 DC systems of distribution	
	3.6 AC systems of distribution	
	3.7 Hull return system	
	3.8 Earthed	
	3.9 Main source of electrical power	
	3.10 Main switchboard	
	3.11 Emergency source of electrical power	
	3.12 Emergency condition	
	3.13 Emergency switchboard	
	3.14 Distribution board	
	3.15 Engine negative terminal	
	3.16 Final circuit	
	3.17 Overcurrent protection device	
	3.18 Circuit breaker	
	3.19 Residual (differential) Current Device (RCD) / Ground Fault Circuit Interrupter (GFCI)	
	3.20 Fuse	
	3.21 Protective conductor	
	3.22 Bond	
	3.23 Neutral conductor	
	3.24 Sheath	
	3.25 Batteries	
	3.26 Cable trunking	
	3.27 Captive-spade terminal	
	3.28 Generator	
	3.29 Accessible	
	3.30 Readily accessible	
	3.31 Certified safe-type equipment	
4	Environmental conditions	314
	4.1 General	
	4.2 Ambient air and cooling water temperatures	
	4.3 Humidity	
	4.4 Salt mist	
	4.5 Inclination	
	4.6 Vibrations	

5	Quality of power supply	315
5.1	General	
5.2	A.c. distribution systems	
5.3	D.c. distribution systems	
5.4	Harmonic distortions	
6	Electromagnetic susceptibility	315
6.1		

Section 2 System Design

1	Supply systems and characteristics of the supply	316
1.1	Supply systems	
1.2	Recommended voltage	
2	Sources of electrical power	317
2.1	Yachts less than 24 metres in length	
2.2	Main source of electrical power	
2.3	Emergency source of electrical power	
3	Distribution	320
3.1	Earthed neutral systems	
3.2	Insulated systems	
3.3	Specific requirements for yachts of 500 gross tonnage and over and charter yachts intended to carry more than 12 passengers	
3.4	A.c. distribution system	
3.5	D.c. distribution system supplied from batteries	
3.6	Shore connection	
3.7	Supply of motors	
3.8	Power supply to lighting installations	
3.9	Navigation and signalling lights	
3.10	General alarm - Public address	
3.11	Internal communications	
3.12	Specific requirements for special power services of yachts of 24 m and over	
3.13	Main engine starting system	
3.14	Specific requirements for yachts with electric propulsion	
3.15	Lightning protection	
4	Degrees of protection of equipment and enclosures	323
4.1	General	
5	Diversity (demand) factors	324
5.1	General	
6	Electrical protection	324
6.1	Protection against overcurrent	
6.2	Localisation of protection	
6.3	Protection of generators	
6.4	Protection of final circuits	
6.5	Protection of motors	
6.6	Protection of storage batteries	
6.7	Protection of transformers	
6.8	Protection of measuring instruments, pilot lamps and control circuits	
6.9	Special applications	

7	Electrical cables	326
7.1	General	
7.2	Conductors	
7.3	Choice of protective covering	
7.4	Cables for submerged bilge pumps	
7.5	Internal wiring of switchboards and other enclosures for equipment	
7.6	Current carrying capacity of cables	
7.7	Minimum nominal cross-sectional area of conductors	
7.8	Choice of cables	
7.9	Parallel connection of cables	
8	Electrical equipment for use in explosive atmospheres	329
8.1	General	
8.2	Electrical installations in battery rooms	
8.3	Electrical equipment for vehicle spaces	

Section 3 Equipment

1	General	330
1.1	Construction	
1.2	Degree of protection of enclosures	
2	Switchboards	330
2.1	Design - Construction	
2.2	Busbars	
2.3	Auxiliary circuits	
2.4	Instruments	
2.5	Testing	
3	Rotating electrical machines	332
3.1	General	
3.2	D.C. generators	
3.3	A.C. generators	
3.4	Prime movers, speed control	
3.5	Testing	
4	Transformers	333
4.1	General	
4.2	Construction	
4.3	Testing	
5	Converters/inverters	333
5.1	General	
5.2	Construction	
6	Storage batteries and chargers	333
6.1	Constructional requirement for batteries	
6.2	Constructional requirement for chargers	
7	Accessories	334
7.1	Plugs and socket-outlets	
7.2	Lighting fittings	
7.3	Electrical heating and cooking appliances	

Section 4 Installation

1	General	335
1.1	Protection against injury or damage caused by electrical equipment	
1.2	Protection against damage to electrical equipment	
1.3	Accessibility	
2	Earthing of non-current carrying parts	335
2.1	General	
2.2	Parts which are to be earthed	
2.3	Earthing connection	
2.4	Earthed distribution system	
2.5	Bonding connections	
3	Converters - Transformers	336
3.1	Semiconductor power converters	
3.2	Transformers	
4	Storage batteries	337
4.1	General	
4.2	Large vented batteries	
4.3	Moderate vented batteries	
4.4	Small vented batteries	
4.5	Ventilation	
5	Switchboards	338
5.1	General	
5.2	Main switchboard	
5.3	Emergency switchboard	
6	Cables	338
6.1	General	
6.2	Cable runs	
6.3	Radius of bend	
6.4	Cable support and protection	
6.5	Penetration of bulkheads and decks	
6.6	Earthing and continuity of metal coverings of cables	
6.7	Earthing and continuity of metal pipes, conduits and trunking or casings	
6.8	Cable trays/protective casings/conduits made of plastics materials	
7	Cabling and wiring	340
7.1	Cable terminations	
7.2	D.c. and a.c. segregation	
7.3	Conductor identification	
8	Various appliances	341
8.1	Lighting fittings	
8.2	Heating appliances	
8.3	Magnetic compass	
8.4	Socket-outlets	

Section 5 Testing

1	General	342
1.1	Rule application	
2	Type approved components	342
2.1		
3	Insulation resistance	342
3.1	Insulation-testing instruments	
3.2	Switchboards	
3.3	Lighting and power circuits	
3.4	Generators and motors	
3.5	Internal communication circuits	
4	Earth	343
4.1	Electrical constructions	
4.2	Metal-sheathed cables, metal pipes or conduits	
5	Operational tests	343
5.1	General	
5.2	Voltage drop	
5.3	Switchgear	
5.4	Consuming devices	
5.5	Emergency source of electrical power	
5.6	Other systems	
5.7	Generating sets and their protective devices	

PART C, CHAPTER 3
AUTOMATION

Section 1 General Requirements

1	General	347
1.1	Field of application	
1.2	Regulations and standards	
1.3	Definitions	
1.4	General	
2	Documentation	347
2.1	General	
3	Environmental and supply conditions	348
3.1		
4	Materials and construction	348
4.1	General	

Section 2 Design Requirements

1	General requirements	349
1.1	General	
2	Control of machinery	349
2.1	General requirements	
2.2	Control of propulsion machinery	
3	Power supply of automation systems	350
3.1		
4	Alarm system	350
4.1	General requirements	
4.2	Alarm functions	
5	Safety system	350
5.1	Design	
5.2	Function	
5.3	Shutdown	

PART C, CHAPTER 4

FIRE PROTECTION, DETECTION AND EXTINCTION

Section 1 General Requirements and Application

1	Application	355
1.1	General	
1.2	National regulations	
1.3	Applicable rules depending on ship type	
2	Charter yachts carrying more than 12 passengers	356
2.1	Applicable rules	
3	Other yachts	356
3.1	Applicable rules	
3.2	Documentation to be submitted	
3.3	Type approved products	
3.4	Definitions	

Section 2 Prevention of Fire

1	General	362
1.1	Application	
2	Probability of ignition	362
2.1	Machinery spaces	
2.2	Galley equipment	
2.3	Other ignition sources	
3	Fire growth potential and control of smoke spread: requirements for materials	363
3.1	Material of hull, superstructures, structural bulkheads, decks and deckhouses	
3.2	Machinery spaces boundaries	
3.3	Fire divisions	
3.4	Insulation materials	
3.5	Primary deck coverings	
3.6	Surface materials and adhesives	
3.7	Ceilings and linings	
3.8	Furniture in stairway enclosures and cabins corridors	

Section 3 Detection and Alarm

1	General	366
1.1	Application	
2	Initial and periodical tests	366
2.1	General	
3	Protection of the engine space for yachts of less than 24 m in length	366
3.1	Installation	

4	Protection of machinery spaces of category A	366
4.1	Installation	
4.2	Design	
5	Protection of accommodation and service spaces	366
5.1	Yachts of 24 m in length and over and of less than 500 GT	
5.2	Yachts of 500 GT and over	
6	Manually operated call points	367
6.1	Yachts of 500 GT and over	

Section 4 Containment of Fire for Yachts of less than 500 GT

1	General	368
1.1	Application	
2	Thermal and structural boundaries	368
2.1	General	
2.2	A class divisions	
2.3	Method of construction within accommodation and service spaces	
3	Protection of openings and penetrations in fire-resisting divisions	369
3.1	General	
3.2	Doors	
3.3	Penetrations	
4	Protection of openings in machinery space boundaries	369
4.1	Windows and skylights	
5	Ventilation	369
5.1	Ventilation fans stops	
5.2	Arrangement of ducts	

Section 5 Fire Fighting for Yachts of less than 500 GT

1	General	371
1.1	Application	
1.2	General requirements	
2	Water supply systems	371
2.1	Application	
2.2	Engineering requirements	
3	Fire-extinguishing arrangements in machinery spaces	372
3.1	Yachts of less than 24 m in length	
3.2	Yachts of 24 m in length and over	
4	Fire-extinguishing arrangements in accommodation and service spaces	373
4.1	Sprinkler systems	
4.2	Portable fire extinguishers	
4.3	Specific requirements for galleys	
4.4	Specific requirements for spaces containing flammable products	

Section 6 Escape for Yachts of less than 500 GT

1	General	375
1.1	Application	
1.2	General requirements	
2	Yachts of less than 24 m in length	375
2.1	Means of escape	
3	Yachts of 24 m in length and over	375
3.1	Means of escape from accommodation and service spaces	
3.2	Means of escape from machinery spaces	

Section 7 Containment of Fire for Yachts of 500 GT and over

1	General	377
1.1	Application	
2	Thermal and structural boundaries	377
2.1	Thermal and structural subdivision	
3	Penetrations in fire-resisting divisions and prevention of heat transmission	382
3.1	Penetrations in A class divisions or equivalent	
3.2	Penetrations in B class divisions	
3.3	Pipes penetrating A or B class divisions	
3.4	Prevention of heat transmission	
4	Protection of openings in fire-resisting divisions	382
4.1	Openings in bulkheads and decks	
5	Protection of openings in machinery space boundaries	383
5.1	Application	
5.2	Protection of openings in machinery space boundaries	
6	Control of smoke spread	384
6.1	Draught stops	
7	Ventilation systems	384
7.1	Ventilation controls	
7.2	Duct and dampers	
7.3	Arrangements of ducts	
7.4	Details of duct penetrations	
7.5	Exhaust ducts from galley ranges	
7.6	Protection of control stations outside machinery spaces	

Section 8 Fire Fighting for Yachts of 500 GT and over

1	General	387
1.1	Application	

2	Water supply systems	387
2.1	General	
2.2	Fire mains and hydrants	
2.3	Fire pumps	
2.4	Fire hoses and nozzles	
3	Portable fire extinguishers	390
3.1	Type and design	
3.2	Arrangement of fire extinguishers	
4	Fixed fire-extinguishing systems	390
4.1	Types of fixed fire-extinguishing systems	
4.2	Closing appliances for fixed gas fire-extinguishing systems	
4.3	Water pumps for other fire-extinguishing systems	
5	Fire-extinguishing arrangements in machinery spaces	391
5.1	General	
5.2	Machinery spaces containing oil-fired boilers or oil fuel units	
5.3	Machinery spaces containing internal combustion machinery	
6	Fire-extinguishing arrangements in control stations, accommodation and service spaces	392
6.1	Sprinkler and water spray systems	
6.2	Spaces containing flammable liquid	
6.3	Deep-fat cooking equipment	

Section 9 Escape for Yachts of 500 GT and over

1	General	393
1.1	Application	
2	Means of escape	393
2.1	General requirements	
2.2	Means of escape from control stations, accommodation spaces and service spaces	
2.3	Means of escape from machinery spaces	
2.4	Means of escape from vehicle spaces	

Section 10 Fire Control Plans

1	General	395
1.1	Application	
2	Yachts of less than 24 m in length	395
2.1	Safety instructions	
3	Yachts of 24 m in length and over	395
3.1	Compilation of the fire control plans	

Section 11 Helicopter Facilities

1	General	396
	1.1 Application	
	1.2 Contents	
	1.3 Definitions	
2	Structure	396
	2.1 Construction of steel or other equivalent materials	
	2.2 Construction of materials other than steel	
	2.3 Means of escape	
3	Fire-fighting appliances	396
	3.1 General	
	3.2 Drainage facilities	
4	Helicopter refuelling and hangar facilities	397
	4.1 Fuel storage system	
	4.2 "No smoking" signs	
	4.3 Hangar, refuelling and maintenance facilities	
	4.4 Arrangement of spaces containing the refuelling installations	
5	Occasional and emergency helicopter operations	398
	5.1 General	
6	Operations manual	398
	6.1 General	

Section 12 Protection of Vehicle Spaces

1	General requirements and application	399
	1.1 Application	
	1.2 Definitions	
2	Ventilation	399
	2.1 Application	
	2.2 Capacity of ventilation systems	
	2.3 Performance of ventilation systems	
	2.4 Indication of ventilation systems	
	2.5 Closing appliances and ducts	
3	Electrical equipment	400
	3.1 Application	
	3.2 Protection of electrical equipment	
4	Detection and alarm	400
	4.1 Application	
	4.2 Fixed fire detection and alarm system	
5	Fire extinction	400
	5.1 Application	
	5.2 Fixed water spray system	

Section 13 Fire Safety Systems

1	General	401
	1.1 Application	
	1.2 Use of toxic extinguishing media	
2	Fire extinguishers	401
	2.1 Portable fire extinguishers	
	2.2 Portable foam applicators	
3	Fixed gas fire-extinguishing systems	401
	3.1 General	
	3.2 Carbon dioxide systems	
	3.3 Equivalent fixed gas fire-extinguishing systems	
4	Fixed pressure water-spraying and water-mist systems	403
	4.1 Fixed pressure water-spraying fire-extinguishing systems	
	4.2 Equivalent water-mist fire-extinguishing systems	
5	Automatic sprinkler, fire detection and fire alarm systems	404
	5.1 Conventional sprinkler system	
	5.2 Equivalent water-mist sprinkler systems	
6	Fixed fire detection and fire alarm systems	406
	6.1 Engineering specifications	

RULES FOR THE CLASSIFICATION AND THE CERTIFICATION OF YACHTS
