Papers:

No.	Author	Title	
CIE Division 3			
<i>Displayed Posters</i>			
3	Demers, C.M.H.	Light and the digital image: A proposed framework for design and analysis	1
5	Veitch, J.A., Newsham, G.R.	Preferred luminous conditions in open-plan offices: Implications for lighting quality recommendations	4
7	Darula, S., Kittler, R.	A catalogue of fifteen sky luminance patterns between the CIE Standard Skies	7
22	Grundy, J.T., Yates, R.S.	Lighting for the retail market	10
24	Einhorn, H.D.	Discomfort glare from small and large light sources	13
25	Kosonen, P.	The effects of coloured window filters on visual comfort	16
46	Akashi, Y., Mukai, K., Tanabe, Y.	A task and ambient lighting system providing energy savings without decreasing the overall brightness impression	17
47	Anai, K., Koga, Y., Nakamura, H., Goto, K., Shinozaki, M.	A study on the ratio of sky luminance to sky radiance	20
48	Hara, N., Satoh, R.	Visibility in the case of eye movement between two visual fields with different background luminance	23
49	Igawa, N., Nakamura, H., Matsuura, K.	Sky luminance distribution model for all sky conditions	26
50	Ikeda, K., Katsumata, N., Endo, Y., Sone, S.	New design of efficient luminaire with unique reflector considering multiple inter-reflection between lamp and reflector	29
51	Ikemoto, N., Isomura, M.	Comparison of the illuminance distribution between on working plane and on floor in a room	32
52	Iki, E., Nagata, M., Shimomura, N.	The distribution of illuminance, spatial illumination vector and color at the eye position of observers using Monte Carlo simulation	35
53	Inoue, Y., Akizuki, Y.	Effects of visual acuity on legibility and brightness - Incorporation of visual acuity into the evaluating condition by introducing relative acuity	38

54	Isomura, M., Ikemoto, N.	On illuminance calculation over working plane in a room containing fixtures	41
55	Iwata, T., Tsukami, S., Mochizuki, E., Kimura, K.	Why and how supplementary artificial light is required in an office space illuminated by windows	44
56	Kai, S., Iwai, H., Morita, T., Nagata, M., Honda, Y.	A detecting procedure of an unknown lighting source based on an illuminance distribution simulation using Monte Carlo method	47
57	Kojo, S., Nakamura, H., Koga, Y., Goto, K., Shinozaki, M.	A basic study on standardization of the sky radiance distribution	50
58	Koga, Y., Anai, K., Nakamura, H., Matsuzawa, T.	A sky scanner for cloud amount measurement	53
59	Matsuzawa, T., Koga, Y., Nakamura, H., Anai, K.	Daylight illuminance by cloud type and amount	56
60	Miki, Y., Miyata, T.	Cubic model expression of lighting environment - understanding of 3-dimensional quality	59
61	Miyasawa, N., Nakamura, Y., Kobayashi, S.	Effect of control on lighting quality assessment	62
65	Ohtani, Y., Uchida, A., Yamaya, T.	Illuminance characteristics within a shadow in a rectangular parallelepiped room	65
66	Oi, N., Munakata, J.	A concept of positioning lighting and visual factors in dwellings based on a post occupancy evaluation method	68
67	Okuda, S., Matsumoto, N., Satoh, R.	Recognition of inside and outside of room through shading window materials - luminance and recognition of visual object through lace curtain	71
68	Satoh, R., Shimoi, M., Hara, N.	Curved surfaces of various visibility level in the three dimensional space composed of three visual factors	74
69	Shinomiya, M., Ishida, T.	Effect of the interior color and lighting on perception of dimensions of the space	77
71	Sugimoto, S., Ikeda, I., Noguchi, Y.	Estimation of physiological effects of lighting by analysis of heart rate variability	80
74	Tokura, M., Iwata, T., Nakamura, Y.	Effects of the distance between a source and an observation point and angle of elevation of large light source on discomfort glare	83
75	Uchida, A., Ohtani, Y.	Prediction of the shadow characteristics under the task ambient lighting - In the case of varied positions of light sources	84
76	Uetani, Y.	Prediction of the global and direct irradiance and illuminance by the geostational meteorological satellite images	87
77	Yamaya, T., Suzuki, H., Ohtani, Y.	Estimation of luminous environment in interior with various window and obstructions through the window	88
78	Yoon, H., Ishida, T.	Perceptual determinant of the sense of continuity between two spaces: test of lighting commonality hypothesis	89
97	Arnesen, H., Aschehoug, O.	Facade daylighting systems for high latitudes	92
