Committees responsible for this Draft for Development

This Draft for Development was prepared by Technical Committee B/513, Construction equipment and plant, and site safety, upon which the following bodies were represented:

- British Drilling Association
- British Precast Concrete Federation
- Building Employers Confederation
- County Surveyors' Society
- Drilling and Sawing Society
- Federation of Civil Engineering Contractors
- Federation of Manufacturers of Construction Equipment and Cranes
- Flat Glass Manufacturers' Association
- Glass and Glazing Federation
- Health and Safety Executive
- Suspended Access Equipment Manufacturers' Association

This Draft for Development, having been prepared under the direction of the Sector Board for Building and Civil Engineering, was published under the authority of the Standards Board and comes into effect on 15 September 1996

National foreword

This Draft for Development has been prepared by Technical Committee B/513. It is identical with ISO/TR 12603:1996 *Building construction machinery and equipment — Classification*, published by the International Organization for Standardization (ISO).

ISO/TR 12603 was prepared by Technical Committee 195, Building construction machinery and equipment, that deals with machines and equipment used on building sites, excluding those related to earth-moving machinery, and cranes.

ISO/TR 12603 has the status of a Technical Report because the Technical Committee recognized that the technical content of the text was insufficient to justify its approval as an International Standard. A Technical Report is valid for three years. During this period the ISO committee will give further consideration to enlarging the content of the text so that it can be transformed into an International Standard.

This publication is not to be regarded as a British Standard

DD 237 is being issued in the Draft for Development series of publications and is of a provisional nature. It should be applied on this provisional basis so that information and experience of its practical application may be obtained.

Comments arising from the use of this Draft for Development are requested so that UK experience can be reported to ISO as part of the process of its conversion to an International Standard. A review of this publication will be initiated 2 years after its publication so that a decision can be taken on its status at the end of its three-year life. The commencement of the review period will be notified by an announcement in *BSI News*.

According to the replies received by the end of the review period, the responsible BSI Committee will decide whether to support its conversion to an International Standard, to extend the life of the Technical Report or to withdraw it. Comments should be sent in writing to the Secretary of BSI Technical Committee B/513 at BSI, 389 Chiswick High Road, London, W4 4AL, giving the document reference and clause number and proposing, where possible, an appropriate revision of the text.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 7 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
