This publication is not to be regarded as a British Standard.

It is issued in the Draft for Development series of publications and is of a provisional nature to allow practical experience of the recommendations to be built up and for information to be gained regarding their suitability for application in different types of data interchange. It is recommended that this publication should be applied on this provisional basis so that information and experience of its practical application may be obtained.

A review of this Draft for Development will be carried out not later than two years after its publication. Notification of the start of the review period together with a request for the submission of comments from the users of this Draft for Development will be made in an announcement in the

appropriate issue of BSI News. Observations which it is felt should receive attention before the official call for comments will be welcomed.

According to the replies received, the responsible BSI Committee will judge whether the Draft for Development can be converted into a British Standard or what other action should be taken if the interim guidance has proved to be not practicable or not useful.

Prototype protocols suitable for implementing the recommendations in this Draft for Development are available commercially and those requiring further information should contact BSI.

Draft for Development

The structure and representation of data for interchange at the application level (DIAL)

Part 2. Recommendations for the basic directory of data elements and groups
Section 2.2 The DIAL directory

0. Introduction

This Section 2.2 states the data elements and groups for use with the syntax and according to the principles contained in Part 1, reference to which is essential. General information relating to the directory and its implementation is contained in the separately published Section 2.1.

NOTE 1. Because of the nature of this document, items, conventionally included in British Standard publications, e.g. list of reference standards, scope clause, have been included in Section 2.1, to which reference is essential.

NOTE 2. As previously described in A.2 of Section 2.1, the original concept of a standard format for representation of all the elements in each category was under review. This Section 2.2 incorporates revised categories and representations. To accommodate these changes, amendments to Part 1 and Section 2.1 are being published separately.

Subsection 2.2.1 Entry classification

1. Data elements. Each data element in the directory is assigned to one of the categories in clause 2 of this subsection and should be represented as specified for its category.

NOTE. Further categories may be added in accordance with 5.2 of Section 2.1 : 1982.

Tags for each data element are allocated as specified in clause 3 of this subsection.

2. Categories and their representation

NOTE. The requirements in this clause supersede the requirements originally given in A.2 of Section 2.1 : 1982 and appendix D of Part 1 : 1981, amendments to which are being published separately. The representations are reproduced in full at the beginning of each category in subsection 2.2.2. Comments on these changes would be particularly welcome.

The categories, their alphabetic codes and formats for representations are given in table 1.

3. Allocation of tags

NOTE 1. A number of systems for allocating tags was considered (see also the foreword to Section 2.1). The conclusions were that a numeric system would have imposed unacceptable limitations on the maximum number of possible data elements; an alphabetic mnemonic system, whilst attractive for human interpretation, would have introduced problems in allocation and, due to the limit of combinations available, would have increased the likelihood of misinterpretation. Thus, an alphanumeric system has been chosen to provide ease of identification of suitable categories, and to maximize the number of options available for data elements within each category.

NOTE 2. Where the elements in the DIAL directory are identical, or similar, to elements in other published directories, these have been cross-referenced in subsection 2.2.5.

Each tag allocated in accordance with this directory is a

unique four character code (see also 7.2(c) of Part 1 : 1981) where:

- (a) the first character, representing the category of data (i.e. the 'alphabetic code'), is an alphabetic character in the range A-W;
- (b) the second character is an alphabetic character in the range A-W or a numeric character in the range 0-9;
- (c) the third and fourth characters are each either alphabetic in the range A-Z, or numeric in the range 0-9.

The letters X, Y, and Z will not be used as alphabetic code prefixes within the DIAL directory and are, therefore, reserved for private use as alphabetic codes. Similarly the letters X, Y and Z will not be used in the second character position in the DIAL tags and, therefore, tags incorporating such coding are reserved for data elements for private use, but otherwise conforming to the DIAL directory.
