Committees responsible for this Draft for Development

The preparation of this Draft for Development was entrusted to Technical Committee STI/52, Adhesives, upon which the following bodies were represented:

- British Adhesives and Sealants Association
- British Plastics Federation
- British Steel Industry
- Centre for Adhesive Technology
- Chemical Industries Association
- Contract Flooring Association
- Department of the Environment (Building Research Establishment)
- Department of Trade and Industry (National Physical Laboratory)
- European Resin Manufacturers' Association
- Federation of the Electronics Industry
- Ministry of Defence
- Society of Motor Manufacturers and Traders Limited
- Timber Research and Development Association
- University of Bristol

This Draft for Development, having been prepared under the direction of the Sector Board for Materials and Chemicals, was published under the authority of the Standards Board and comes into effect on 15 February 1996

National foreword

This Draft for Development has been prepared by Technical Committee STI/52 and is the English language version of ENV 1967:1995, *Structural adhesives — Evaluation of the effectiveness of surface treatment techniques for aluminium using a wet peel test in association with the floating roller method*, published by the European Committee for Standardization (CEN). ENV 1967 was produced as a result of international discussion in which the United Kingdom participated.

CAUTION. Attention is drawn to the Health and Safety at Work etc. Act 1974, and the need for ensuring that the method specified in this Draft for Development is carried out with suitable precautions.

The procedures described in this Draft for Development are intended to be carried out by appropriately qualified and experienced persons or other suitably trained and/or supervised personnel. Normal safety precautions should be used throughout the use of the method.

Cross-references

Publication referred to	Corresponding British Standard
EN 1464:1994	BS EN 1464:1995 <i>Adhesives — Determination of peel resistance of high-strength adhesive bonds — Floating roller method</i>
EN 29142:1993	BS EN 29142:1993 <i>Adhesives — Guide to the selection of standard laboratory ageing conditions for testing bonded joints</i>

It is being issued in the Draft for Development series of publications and is of a provisional nature because there is at present insufficient experience in the use of the test method. It should be applied on this provisional basis, so that information and experience of its practical application may be obtained and reported to the responsible CEN Technical Committee. Users of this Draft for Development are invited to comment on its technical content, ease of use and any ambiguities or anomalies. These comments will be taken into account when preparing the UK national response to CEN on the question of whether the ENV can be converted to an EN. Comments should be sent in writing to the Secretary of BSI Technical Committee STI/52 at BSI, 389 Chiswick High Road, London, W4 4AL, quoting this Draft for Development, the relevant clause number and a proposed revision, within 2 years of the issue of this Draft for Development.

This publication is not to be regarded as a British Standard

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the ENV title page, pages 2 to 6, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
