

Multi-pair cables used in high bit rate digital access telecommunication networks —

Part 1: Outdoor cables

ICS 33.120.20; 29.060.20

National foreword

This Draft for Development is the English language version of IEC/PAS 62255-1 Edition 1:2001

This publication is not to be regarded as a British Standard.

It is being issued in the Draft for Development series of publications and is of a provisional nature because it is considered that further experience is required in its application before it is converted into a British Standard. It should be applied on this provisional basis, so that information and experience of its practical application may be obtained.

A PAS is a technical specification not fulfilling the requirements for a standard, but made available to the public and established in an organization operating under given procedures.

IEC-PAS 62255-1 has been processed by subcommittee 46C: Wires and symmetric cables, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors and accessories for communication and signalling.

Following publication of this PAS, the technical committee or subcommittee concerned will investigate the possibility of transforming the PAS into an International Standard. Comments should be sent in writing to the Secretary of BSI Sub-committee EPL/46/1, Communication Cables, at 389 Chiswick High Road, London W4 4AL, giving the document reference and clause number and proposing, where possible, an appropriate revision of the text.

A list of organizations represented on this committee can be obtained on request to its secretary.
