

Steam turbines — Steam purity

ICS 27.040

National foreword

This Draft for Development is the English language version of IEC TS 61370:2002.

This publication is not to be regarded as a British Standard.

It is being issued in the Draft for Development series of publications and is of a provisional nature because it was not possible to obtain the necessary support for the production of an International Standard at this time but it was considered important that the information included should be made available for general use as quickly as possible. It should be applied on this provisional basis, so that information and experience of its practical application may be obtained.

Comments arising from the use of this Draft for Development are requested so that UK experience can be reported to the international organization responsible for the Technical Specification. A review of this publication will be initiated not later than 3 years after its publication by the international organization so that a decision can be taken on its status at the end of its 3-year life. Notification of the start of the review period will be made in an announcement in the appropriate issue of *Updated Standard*.

According to the replies received by the end of the review period, the responsible BSI Committee will decide whether to support the conversion into an international standard, to extend the life of the Technical Specification for another 3 years or to withdraw it. Comments should be sent in writing to the Secretary of BSI Technical Committee MCE/13, Steam turbines, at 389 Chiswick High Road, London W4 4AL, giving the document reference and clause number and proposing, where possible, an appropriate revision of the text.

A list of organizations represented on this committee can be obtained on request to its secretary.

From 1 January 1997, all IEC publications have the number 60000 added to the old number. For instance, IEC 27-1 has been renumbered as IEC 60027-1. For a period of time during the change over from one numbering system to the other, publications may contain identifiers from both systems

Cross-references

The British Standards which implement international publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This Draft for Development, having been prepared under the direction of the Engineering Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 26 July 2002

Summary of pages

This document comprises a front cover, an inside front cover, the IEC TS title page, pages 2 to 17 and a back cover.

The BSI copyright date displayed in this document indicates when the document was last issued.

CONTENTS

FOREWORD.....	3
1 Scope.....	5
2 Abbreviated terms.....	6
3 Need for steam purity control	6
3.1 Corrosion and loss of efficiency or output.....	6
3.2 Categories of plant	6
3.2.1 Reheat and non-reheat plants	6
3.2.2 Primary source of energy	6
3.3 Operating regimes	7
3.3.1 Start-up	7
3.3.2 Volatile chemical-based treatments	7
3.3.3 Solid chemical-based treatments.....	8
4 Sampling and analysis	8
4.1 Sampling locations	8
4.2 Measured parameters.....	9
4.2.1 Cation conductivity.....	9
4.2.2 Sodium	9
4.2.3 Silica	9
4.3 Significance of parameters	11
4.3.1 Cation conductivity.....	11
4.3.2 Sodium	11
4.3.3 Silica	11
4.3.4 Chloride.....	11
4.3.5 Sulphate	12
4.3.6 Iron and copper	12
4.3.7 Alternative additives.....	12
Annex A (informative) Guideline values	13

INTERNATIONAL ELECTROTECHNICAL COMMISSION

STEAM TURBINES – STEAM PURITY

FOREWORD

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical specifications, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
- 6) Attention is drawn to the possibility that some of the elements of this technical specification may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC 61370, which is a technical specification, has been prepared by IEC technical committee 5: Steam turbines.

The text of this technical specification is based on the following documents:

Enquiry draft	Report on voting
5/133/DTS	5/138/RVC

Full information on the voting for the approval of this technical specification can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 3.

Annex A is for information only.

The committee has decided that the contents of this publication will remain unchanged until 2005. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.
