DIN-Normenausschuss Bauwesen (NABau)

Nationales Vorwort

Dieses Dokument (EN ISO 19150-6:2023) wurde vom Technischen Komitee ISO/TC 211 „Geographic information/Geomatics“ in Zusammenarbeit mit dem Technischen Komitee CEN/TC 287 „Geoinformation“ erarbeitet, dessen Sekretariat von BSI (Vereinigtes Königreich) gehalten wird.

Für Deutschland hat hieran der Arbeitsausschuss NA 005-03-03 AA „Geoinformation (SpA zu CEN/TC 287+ISO/TC 211)“ im DIN-Normenausschuss Bauwesen (NABau) mitgearbeitet.

Dieses Dokument enthält unter Berücksichtigung des DIN-Präsidialbeschlusses 1/2004 nur die Englische Fassung von EN ISO 19150-6:2023.

Für die in diesem Dokument zitierten Dokumente wird im Folgenden auf die entsprechenden deutschen Dokumente hingewiesen:

ISO 19101-1	siehe	DIN EN ISO 19101-1
ISO 19119:2016	siehe	DIN EN ISO 19119:2016-08
ISO 19135-1:2015	siehe	DIN EN ISO 19135-1:2016-02

Aktuelle Informationen zu diesem Dokument können über die Internetseiten von DIN (www.din.de) durch eine Suche nach der Dokumentennummer aufgerufen werden.

Nationaler Anhang NA (informativ)

Begriffe

Reihenfolge und Inhalt der folgenden Begriffe sind identisch mit denen im Abschnitt Begriffe der Englischen Fassung.

Für die Anwendung dieses Dokuments gelten die Begriffe nach ISO 19101-1 und ISO 191235-1 und die folgenden Begriffe.

ISO und IEC stellen terminologische Datenbanken für die Verwendung in der Normung unter den folgenden Adressen bereit:

- ISO Online Browsing Platform: verfügbar unter <https://www.iso.org/obp>
- IEC Electropedia: verfügbar unter <https://www.electropedia.org/>

This European Standard was approved by CEN on 23 January 2023.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN ISO 19150-6:2023) has been prepared by Technical Committee ISO/TC 211 "Geographic information/Geomatics" in collaboration with Technical Committee CEN/TC 287 "Geographic Information" the secretariat of which is held by BSI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2024, and conflicting national standards shall be withdrawn at the latest by January 2024.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national standards body/national committee. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Endorsement notice

The text of ISO 19150-6:2023 has been approved by CEN as EN ISO 19150-6:2023 without any modification.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 211, *Geographic information/Geomatics*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 287, *Geographic Information*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

A list of all parts in the ISO 19150 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The Semantic Web has introduced the Web of Data. The Web of Data is essentially an extension of the Web oriented towards machine-processable data as opposed to documents. It can be seen as a tremendous worldwide open database that people can query from their own perspective, understanding or abstraction of real-world phenomena or events. From it, they can find accurate, detailed and appropriate answers as people communicate between one another. This approach involves reasoning capabilities based on ontologies. The Semantic Web brings new opportunities in the geographic information realm to lay out a new generation of standards that will improve semantic interoperability of geographic information.

Fundamentally, 'ontology' comes from the field of philosophy and refers to the study of the nature of the world itself. The information technology and artificial intelligence communities have borrowed the term ontology for the explicit specification of a conceptualization.^[4] In the field of geographic information, ontology consists of a formal representation of phenomena of a universe of discourse with an underlying vocabulary including definitions and axioms that make the intended meaning explicit and describe phenomena and their interrelationships.^[2] Information technology and artificial intelligence consider that reality can be abstracted differently depending on the context from which 'things' are perceived and, as such, recognize that multiple ontologies about the same part of reality can exist. An ontology can be formalized differently ranging from weak to strong semantics: taxonomy, thesaurus, conceptual model, and logical theory.^[4]

On the Semantic Web, ontology defines the meaning of data and describes it in a format that machines and applications can read. An application using data also has access to the inherent semantics of those data through the ontology associated with them. Ontologies can support integration of heterogeneous data captured by different communities by relating them based on their semantic similarity. The World Wide Web Consortium (W3C) has published the Web Ontology Language (OWL) family of knowledge representation languages for authoring ontologies characterized by formal semantics on the Web.^{[5],[7]}

Geographic information Web services are important components that compose the Web. The Semantic Web can contribute to facilitating the interaction between them by introducing an ontology for geographic information Web Services. It can support geographic information Web services to automate their discovery, composition and invocation in order to enable seamless machine interoperation with minimum human interaction. ISO 19150-4 sets out the ontological framework for the ontological description of geographic information Web services. However, the discovery of such services requires the registration of their implementation ontologies. This document sets out a standard registration and maintenance mechanism for the registration of ISO 19150-4-conformant geographic information service ontologies. The intention is for this document to be potentially referenceable by an ISO Registration Authority standard for setting up an international register of geographic information service ontologies. Annex B of this document provides additional information to enable the registration of GeoWeb service ontology described in other frameworks such as the Semantic Markup for Web Services (OWL-S), the Semantic Web Services Ontology (SWSO), the Web Service Modeling Ontology (WSMO) and the OGC Web Service Common (OWS-C).

This document is not an ISO Registration Authority (RA) document. Any organization may establish a register of service ontologies. If creating an ISO register, this document can act as a supporting document for the ISO RA document for that register.

The purpose of this document is different from that of the ISO/IEC 19763 family of International Standards, which specifies an information artefact called the Registry Summary. The Registry Summary consists of information that describes administrative aspects, the summary of contents and the technical access method of the registry. In contrast, registry based on this document can be described following ISO/IEC 19763-6.

ISO/IEC 18384-3 defines a formal ontology for service-oriented architecture (SOA), an architectural style that supports service orientation. The terms defined in ISO/IEC 18384-3 are key terms from ISO/IEC 18384-1. This document does not provide any architectural style to support service orientation, although GeoWeb service definitions can potentially take advantage of ISO/IEC 18384-3 for their description.

Geographic information — Ontology —

Part 6: Service ontology register

1 Scope

This document establishes a standard registration and maintenance mechanism for the registration of ISO 19150-4-conformant geographic information service ontologies.

This document makes use of ISO 19135-1 whenever appropriate.

This document does not define semantics operators or rules for ontologies, and does not develop any application ontology.

In relation to ISO 19101-1:2014, 6.2, this document defines and formalizes the following purposes of the ISO geographic information reference model:

- geographic information service components and their behaviour for data processing purposes over the Web; and
- OWL ontologies to cast ISO/TC 211 International Standards to benefit from and support the Semantic Web.

In relation to ISO 19101-1:2014, 8.3, this document addresses the Application:Procedural foundation of the ISO geographic information reference model.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 19101-1, *Geographic information — Reference model — Part 1: Fundamentals*

ISO 19103, *Geographic information — Conceptual schema language*

ISO 19135-1:2015, *Geographic information — Procedures for item registration — Part 1: Fundamentals*

ISO 19150-4, *Geographic information — Ontology — Part 4: Service ontology*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 19101-1 and ISO 19135-1 and the following apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <https://www.electropedia.org/>

3.1

service

distinct part of the functionality that is provided by an entity through interfaces

[SOURCE: ISO 19119:2016, 4.1.12]

4 Abbreviated terms and namespaces

4.1 Abbreviated terms

GeoWeb service	geographic information web service
ISO RA	ISO registration authority
OGC	Open Geospatial Consortium
OWL	web ontology language
OWL-S	semantic markup for web services
OWS-C	OGC web service common
SOA	service-oriented architecture
SWSO	semantic web services ontology
UML	unified modelling language
URI	universal resource identifier
W3C	World Wide Web Consortium
WSMO	web service modelling ontology
