

EIA RS-301-B

EIA STANDARD

TYPE DESIGNATION SYSTEM
FOR
ELECTRON TUBES

RS-301-B

(Revision of RS-301-A)

AUGUST 1979

ELECTRONIC INDUSTRIES ASSOCIATION

NOTICE

EIA engineering standards are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such standards shall not in any respect preclude any member or non-member of EIA from manufacturing or selling products not conforming to such standards, nor shall the existence of such standards preclude their voluntary use by those other than EIA members whether the standard is to be used either domestically or internationally.

Recommended standards are adopted by EIA without regard to whether or not their adoption may involve patents on articles, materials, or processes. By such action, EIA does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the recommended standards.

This EIA Recommended Standard is considered to have international standardization implications, but the IEC (or ISO) activity has not progressed to the point where a valid comparison between the EIA Recommended Standard and the IEC (or ISO) Recommendation can be made.
