**(B-BCSD)**

## Brief History

This Standard is one of a series of ECMA Standards defining services and signalling protocols applicable to Broadband Private Integrated Services Networks (B-PISNs). The series uses B-ISDN concepts as developed by ITU -T and conforms to the framework of International Standards for Open Systems Interconnection as defined by ISO/IEC. It has been produced under ETSI work item DE/ECMA-00132.

This particular Standard specifies the broadband connection oriented bearer services.

This Standard is based upon the practical experience of ECMA member companies and the results of their active and continuous participation in the work of ISO/IEC JTC1, ITU-T, ETSI and other international and national standardization bodies. It represents a pragmatic and widely based consensus.

The services specified in this Standard are compatible with the equivalent services specified by the ATM Forum for private ATM networks and by ITU-T or ETSI for public B-ISDN.

This ECMA Standard is contributed to ISO/IEC JTC1 under the terms of the fast-track procedure, for adoption as an ISO/IEC International Standard.

This ECMA Standard has been adopted by the General Assembly of June 1997.

|                                                                                   |          |
|-----------------------------------------------------------------------------------|----------|
| <b>1 Scope</b>                                                                    | <b>1</b> |
| <b>2 Conformance</b>                                                              | <b>1</b> |
| <b>3 References (normative)</b>                                                   | <b>1</b> |
| <b>4 Definitions</b>                                                              | <b>1</b> |
| 4.1 External definitions                                                          | 1        |
| 4.2 Call                                                                          | 2        |
| 4.3 Call/connection                                                               | 2        |
| <b>5 List of acronyms</b>                                                         | <b>2</b> |
| <b>6 Broadband connection oriented bearer services</b>                            | <b>2</b> |
| 6.1 Description                                                                   | 2        |
| 6.2 Static Description: Service Attributes                                        | 3        |
| 6.2.1 Bearer service using a constant bit rate                                    | 3        |
| 6.2.2 Bearer service with real time requirements using a variable bit rate        | 4        |
| 6.2.3 Bearer service without real time requirements using a variable bit rate     | 4        |
| 6.2.4 Bearer service using the available bit rate                                 | 5        |
| 6.2.5 Bearer service using the unspecified bit rate                               | 6        |
| 6.3 Procedures                                                                    | 7        |
| 6.3.1 Provision                                                                   | 7        |
| 6.3.2 Normal procedures                                                           | 7        |
| 6.3.3 Exceptional procedures                                                      | 8        |
| 6.4 Interworking considerations                                                   | 8        |
| 6.4.1 Interworking with a public B-ISDN                                           | 8        |
| 6.4.2 Interworking with a narrowband private integrated services network (N-PISN) | 8        |
| <b>Annex A - Glossary of terms</b>                                                | <b>9</b> |
