ECMA

Standardizing Information and Communication Systems

Telephony System with Integrated Internet Access - Overview

.....

Brief History

This Technical Report provides information on telephony systems with integrated Internet access, covering definitions, general architecture and standardization areas.

Originally, the work was started in ISRF (Internet Screenphone Reference Forum) and has been brought to ECMA TC32 for standardization in December 1998. TC32 has established a new Task Group (TG16) being responsible for standardization activities in this field.

This document is the first document of a set of related documents, which will cover specification of functional entities of such a system and the corresponding procedures and protocols.

The Technical Report is based upon the practical experience of ECMA member companies and the results of their active and continuous participation in the work of ISO, ITU-T, ETSI and other international and national standardization organisations.

This Technical Report has been adopted by the ECMA General Assembly of December 1999.

Table of contents

1	Scope	1
2	References	1
3	Acronyms	1
4	Definitions	2
4.1	Screenphone	2
4.2	Terminal Manager	2
4.3	Terminal profile	2
4.4	User Profile	2
5	Introduction	2
6	General architecture	3
6.1	Reference Model	3
6.1.1	Screenphone	3
6.1.2	Terminal Manager	4
6.2	Configuration examples	5
6.2.1	Private network (PISN)	5
6.2.2	Screenphone connected to a PISN, Terminal Manager connected to a public telephony network	6
6.2.3	Screenphone connected to a public telephony network, Terminal Manager to a PISN	6
6.2.4	Public telephony network	7
6.2.5	Connection of Terminal Manager to the Internet	7
7	Standardization paths	8
7.1	Potential standardization areas	8
7.2	Co-operation with other standardization organizations	8
Annex A - Services example		9
Annex B - Status of related standardization activities		11
