ESDU DATA ITEMS

Data Items provide validated information in engineering design and analysis for use by, or under the supervision of, professionally qualified engineers. The data are founded on an evaluation of all the relevant information, both published and unpublished, and are invariably supported by original work of ESDU staff engineers or consultants. The whole process is subject to independent review for which crucial support is provided by industrial companies, government research laboratories, universities and others from around the world through the participation of some of their leading experts on ESDU Technical Committees. This process ensures that the results of much valuable work (theoretical, experimental and operational), which may not be widely available or in a readily usable form, can be communicated concisely and accurately to the engineering community.

We are constantly striving to develop new work and review data already issued. Any comments arising out of your use of our data, or any suggestions for new topics or information that might lead to improvements, will help us to provide a better service.

THE PREPARATION OF THIS DATA ITEM

The work on this particular Data Item was monitored and guided by the Technical Committees of the Institution of Mechanical Engineers. The Committee responsible for this particular Item was the Bearings and Lubrication Committee, which has the following constitution:

Chairman

Mr M.J. Neale — Consulting Engineer

Members

Dr D. Dowson	— University of Leeds
Mr A.B. Duncan	— G. and J. Weir Ltd
Mr F.A. Martin	— The Glacier Metal Company Ltd
Dr P.B. Neal	— University of Sheffield
Dr D. Summers-Smith	— Imperial Chemical Industries Ltd
Dr R.G. Woolcott	— National Engineering Laboratory.

The construction and subsequent development of the Data Item was undertaken by

Mr V.A. Smith	— Materials and Design Group
Mr A.G.R. Thomson	— Head of Materials and Design Group.

The Bearings and Lubrication Committee, which first met in July 1964, has the co-operation of many engineers and scientists in industry, research establishments and universities from whom much assistance and unpublished information is being received. Particular assistance was received for the preparation of this Item from Mr R.J. Milton of the Skefko Ball Bearing Company Ltd., and Mr V.T. Morgan of Bound Brook Ltd.

The person with overall responsibility for the work in this subject area is Mr C.J. Loughton, Head of Mechanical Motion and System Dynamics Group.
