About the IEC
The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications
The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform
The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,…). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished
Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc
If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org
The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary
67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

MEDICAL ELECTRICAL EQUIPMENT –

Part 2-19: Particular requirements for the basic safety and essential performance of infant incubators

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

AVA Documents
Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

International standard IEC 60601-2-19 has been prepared by subcommittee 62D: Electromedical equipment, of IEC technical committee 62: Electrical equipment in medical practice.

This third edition cancels and replaces the second edition published in 2009 and Amendment 1:2016. This edition constitutes a technical revision.

This edition includes the following significant technical change with respect to the previous edition: re-dating of normative references.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
62D/1764/FDIS	62D/1774/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

In this document, the following print types are used:

– requirements and definitions: roman type;
– *test specifications: italic type*;
– informative material appearing outside of tables, such as notes, examples and references: in smaller type. Normative text of tables is also in a smaller type;
– TERMS DEFINED IN CLAUSE 3 OF THE GENERAL STANDARD, IN THIS PARTICULAR STANDARD OR AS NOTED: SMALL CAPITALS.

In referring to the structure of this document, the term

– "clause" means one of the seventeen numbered divisions within the table of contents, inclusive of all subdivisions (e.g. Clause 7 includes subclauses 7.1, 7.2, etc.);
– "subclause" means a numbered subdivision of a clause (e.g. 7.1, 7.2 and 7.2.1 are all subclauses of Clause 7).

References to clauses within this document are preceded by the term "Clause" followed by the clause number. References to subclauses within this particular standard are by number only.

In this document, the conjunctive "or" is used as an "inclusive or" so a statement is true if any combination of the conditions is true.

The verbal forms used in this document conform to usage described in Clause 7 of the ISO/IEC Directives, Part 2. For the purposes of this document, the auxiliary verb:

– "shall" means that compliance with a requirement or a test is mandatory for compliance with this document;
– "should" means that compliance with a requirement or a test is recommended but is not mandatory for compliance with this document;
– "may" is used to describe a permissible way to achieve compliance with a requirement or test.

An asterisk (*) as the first character of a title or at the beginning of a paragraph or table title indicates that there is guidance or rationale related to that item in Annex AA.

AVA Documents
Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

A list of all parts of the IEC 60601 series, published under the general title *Medical electrical equipment,* can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

NOTE The attention of users of this document is drawn to the fact that equipment manufacturers and testing organizations may need a transitional period following publication of a new, amended or revised IEC publication in which to make products in accordance with the new requirements and to equip themselves for conducting new or revised tests. It is the recommendation of the committee that the content of this publication be adopted for implementation nationally not earlier than 3 years from the date of publication.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The minimum safety requirements specified in this particular standard are considered to provide for a practical degree of safety in the operation of INFANT INCUBATOR equipment.

~~This particular standard amends and supplements IEC 60601-1:2005, *Medical electrical equipment – Part 1: General requirements for basic safety and essential performance*, hereinafter referred to as the general standard.~~

~~The requirements are followed by specifications for the relevant tests.~~

~~A general guidance and rationale for the requirements of this particular standard are given in Annex AA.~~

~~It is considered that knowledge of the reasons for these requirements will not only facilitate the proper application of this particular standard but will, in due course, expedite any revision necessitated by changes in clinical practice or as a result of developments in technology. However, this annex does not form part of the requirements of this standard.~~

MEDICAL ELECTRICAL EQUIPMENT –

Part 2-19: Particular requirements for the basic safety and essential performance of infant incubators

201.1 Scope, object and related standards

Clause 1 of the general standard[1] applies, except as follows:

201.1.1 * Scope

Replacement:

This part of IEC 60601 applies to the BASIC SAFETY and ESSENTIAL PERFORMANCE of INFANT INCUBATORS, as defined in 201.3.209, also referred to as ME EQUIPMENT.

If a clause or subclause is specifically intended to be applicable to ME EQUIPMENT only, or to ME SYSTEMS only, the title and content of that clause or subclause will say so. If that is not the case, the clause or subclause applies both to ME EQUIPMENT and to ME SYSTEMS, as relevant.

HAZARDS inherent in the intended physiological function of ME EQUIPMENT or ME SYSTEMS within the scope of this document are not covered by specific requirements in this document, except in 7.2.13 and 8.4.1 of the general standard.

NOTE See also 4.2 of the general standard.

This particular standard specifies safety requirements for INFANT INCUBATORS, but alternate methods of compliance with a specific clause, by demonstrating equivalent safety, will not be judged as non-compliant, if the MANUFACTURER has demonstrated in his RISK MANAGEMENT FILE that the RISK presented by the HAZARD has been found to be of an acceptable level when weighed against the benefit of treatment from the device.

This particular standard does not apply to:

– INFANT TRANSPORT INCUBATORS; for information, see IEC 60601-2-20 [1][2];
– INFANT RADIANT WARMERS; for information, see IEC 60601-2-21 [2];
– devices supplying heat via BLANKETS, PADS or MATTRESSES in medical use; for information see ~~IEC 80601-2-35~~ IEC 60601-2-35 [3];
– INFANT PHOTOTHERAPY EQUIPMENT; for information see IEC 60601-2-50 [4].

SKIN TEMPERATURE SENSORS which are applied to operate a BABY CONTROLLED INCUBATOR including the displayed value are not considered to be a CLINICAL THERMOMETER in the sense of the particular standard ISO 80601-2-56.

---

1 The general standard is IEC 60601-1 and IEC 60601-1:2005/AMD1:2012, *Medical electrical equipment – Part 1: General requirements for basic safety and essential performance.*

2 Figures in square brackets refer to the Bibliography.

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

201.1.2 Object

Replacement:

The object of this particular standard is to establish particular BASIC SAFETY and ESSENTIAL PERFORMANCE requirements for INFANT INCUBATORS as defined in 201.3.~~208~~209, which minimize HAZARDS to PATIENT and OPERATOR, and to specify tests by which compliance with the requirements can be verified.

201.1.3~~ *~~ Collateral standards

Addition:

This particular standard refers to those applicable collateral standards that are listed in Clause 2 of the general standard and Clause 201.2 of this particular standard.

~~IEC 60601-1-2 and IEC 60601-1-10 apply as modified in Clauses 202 and 210 respectively. IEC 60601-1-3 does not apply. All other published collateral standards in the IEC 60601-1 series apply as published.~~

IEC 60601-1-2:2014 applies as modified in Clause 202. IEC 60601-1-3 and IEC 60601-1-10 do not apply. All other published collateral standards in the IEC 60601-1 series apply as published.

201.1.4 Particular standards

Replacement:

In the IEC 60601 series, particular standards may modify, replace or delete requirements contained in the general standard and collateral standards as appropriate for the particular ME EQUIPMENT under consideration, and may add other BASIC SAFETY and ESSENTIAL PERFORMANCE requirements.

A requirement of a particular standard takes priority over the general standard.

For brevity, IEC 60601-1 and IEC 60601-1:2005/AMD1:2012~~ is~~ are referred to in this particular standard as the general standard. Collateral standards are referred to by their document number.

The numbering of clauses and subclauses of this particular standard corresponds to that of the general standard with the prefix "201" (e.g. 201.1 in this document addresses the content of Clause 1 of the general standard) or applicable collateral standard with the prefix "20x" where x is the final digit(s) of the collateral standard document number (e.g. 202.4 in this particular standard addresses the content of Clause 4 of the IEC 60601-1-2 collateral standard, 203.4 in this particular standard addresses the content of Clause 4 of the IEC 60601-1-3 collateral standard, etc.). The changes to the text of the general standard and applicable collateral standards are specified by the use of the following words:

"*Replacement*" means that the clause or subclause of the general standard or applicable collateral standard is replaced completely by the text of this particular standard.

"*Addition*" means that the text of this particular standard is additional to the requirements of the general standard or applicable collateral standard.

"*Amendment*" means that the clause or subclause of the general standard or applicable collateral standard is amended as indicated by the text of this particular standard.

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

Subclauses, figures or tables which are additional to those of the general standard are numbered starting from 201.101. However, due to the fact that definitions in the general standard are numbered 3.1 through ~~3.139~~ 3.147, additional definitions in this document are numbered beginning from 201.3.201. Additional annexes are lettered AA, BB, etc., and additional items aa), bb), etc.

Subclauses, figures or tables which are additional to those of a collateral standard are numbered starting from 20x, where "x" is the number of the collateral standard, e.g. 202 for IEC 60601-1-2, 203 for IEC 60601-1-3, etc.

The term "this document" is used to make reference to the general standard, any applicable collateral standards and this particular standard taken together.

Where there is no corresponding clause or subclause in this particular standard, the clause or subclause of the general standard or applicable collateral standard, although possibly not relevant, applies without modification; where it is intended that any part of the general standard or applicable collateral standard, although possibly relevant, is not to be applied, a statement to that effect is given in this particular standard.

201.2 Normative references

NOTE Informative references are listed in the Bibliography.

Clause 2 of the general standard applies, except as follows:

~~*Amendment*~~

Addition:

IEC 60601-1:2005, *Medical electrical equipment – Part 1: General requirements for basic safety and essential performance*
IEC 60601-1:2005/AMD1:2012

Replacement:

IEC 60601-1-2:~~2007~~2014, *Medical electrical equipment – Part 1-2: General requirements for basic safety and essential performance – Collateral standard: Electromagnetic ~~compatibility~~ disturbances – Requirements and tests*

~~*Addition:*~~

~~IEC 60601-1-10:2007, *Medical electrical equipment – Part 1-10: General requirements for basic safety and essential performance – Collateral Standard: Requirements for the development of physiologic closed-loop controllers*~~

201.3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60601-1:2005~~, apply, except as follows:~~ and IEC 60601-1:2005/AMD1:2012 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at http://www.electropedia.org/
- ISO Online browsing platform: available at http://www.iso.org/obp

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

NOTE An index of defined terms is found on page 41.

Addition:

201.3.201
AIR CONTROLLED INCUBATOR
INFANT INCUBATOR in which the air temperature is automatically controlled by an air temperature sensor according to the CONTROL TEMPERATURE set by the OPERATOR

201.3.202
AVERAGE INCUBATOR TEMPERATURE
average of the INCUBATOR TEMPERATURE readings taken at regular intervals achieved during STEADY TEMPERATURE CONDITION ~~(see Figure 201.102)~~

SEE Figure 201.101

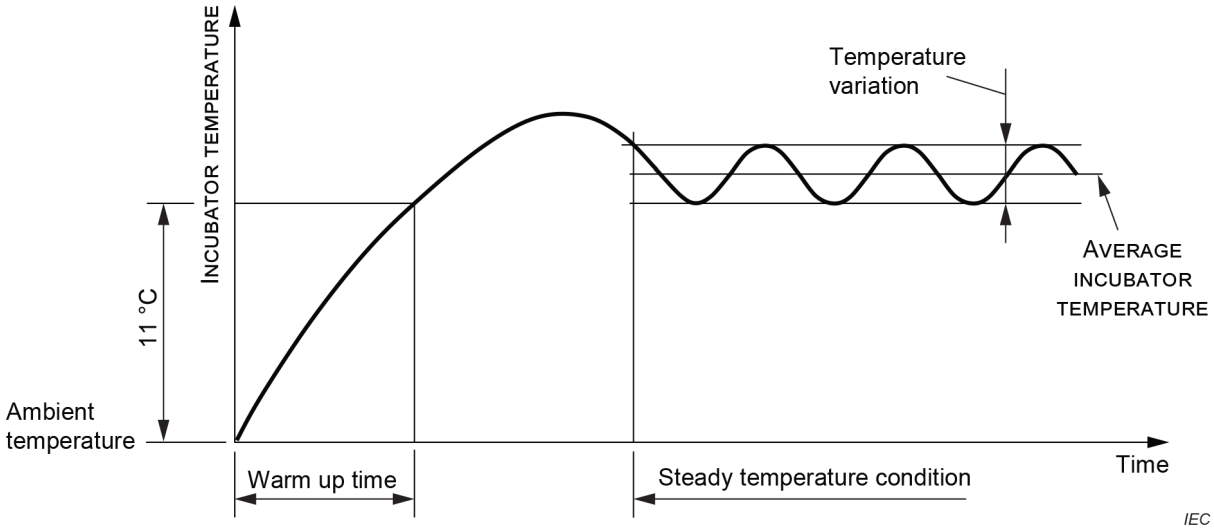

Figure 201.101 – Variation of INCUBATOR TEMPERATURE

201.3.203
AVERAGE TEMPERATURE
average of temperature readings taken at regular intervals at any specified point in the COMPARTMENT achieved during STEADY TEMPERATURE CONDITION

201.3.204
BABY CONTROLLED INCUBATOR
AIR CONTROLLED INCUBATOR which has the additional capability of automatically controlling the INCUBATOR air temperature in order to maintain the temperature as measured by a SKIN TEMPERATURE SENSOR according to the CONTROL TEMPERATURE set by the OPERATOR

~~NOTE An INFANT INCUBATOR operating as a BABY CONTROLLED INCUBATOR is a PHYSIOLOGIC CLOSED-LOOP CONTROLLER as defined in IEC 60601-1-10.~~

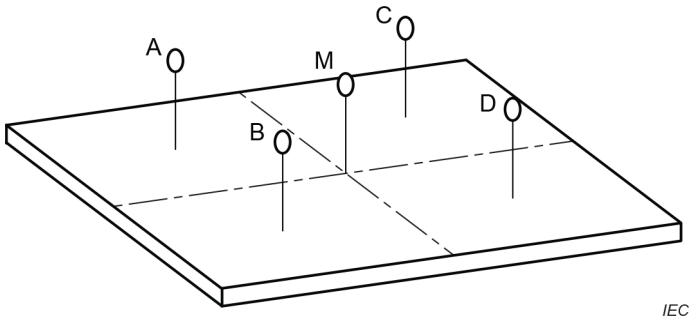
201.3.205
COMPARTMENT
environmentally-controlled enclosure intended to contain an INFANT and with transparent section(s) which allows for viewing of the INFANT

201.3.206
CONTROL TEMPERATURE
temperature selected at the temperature control

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

201.3.207
INCUBATOR TEMPERATURE
temperature of the air at a point 10 cm above the centre of the MATTRESS surface in the COMPARTMENT ~~(see Figure 201.101, point M)~~

SEE Figure 201.102, point M



Key

M INCUBATOR TEMPERATURE sensor

A, B, C, D air temperature sensor

The measuring points A to D and M are in a plane parallel to and at a distance of 10 cm from the MATTRESS.

Figure 201.102 – Positioning of air temperature sensors

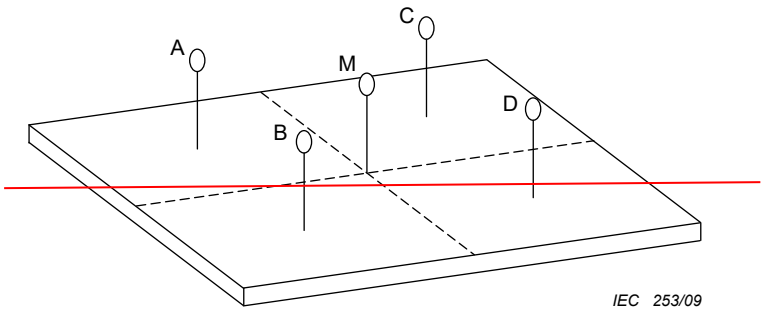
201.3.208
INFANT
PATIENT up to the age of three months and a weight less than 10 kg

201.3.209
INFANT INCUBATOR
ME EQUIPMENT having a COMPARTMENT which is provided with the means to control the environment of the INFANT primarily by heated air within the COMPARTMENT

201.3.210
SKIN TEMPERATURE
temperature of the skin of the INFANT at a point on which the SKIN TEMPERATURE SENSOR is placed

201.3.211
SKIN TEMPERATURE SENSOR
sensing device intended to measure the INFANT SKIN TEMPERATURE

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV



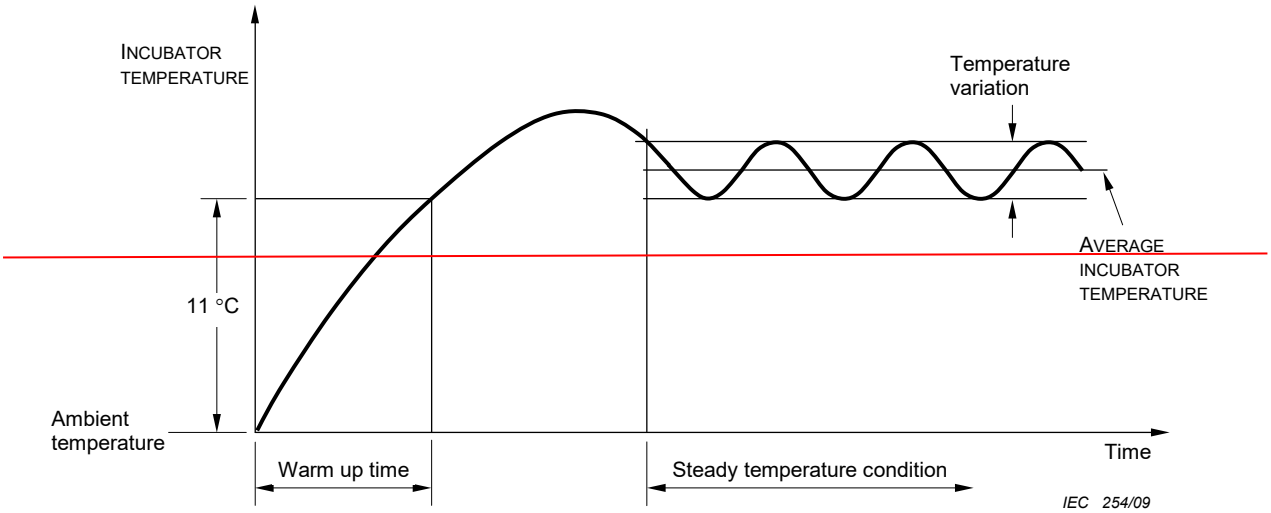
~~Key~~

~~M = INCUBATOR TEMPERATURE sensor~~

~~A, B, C, D = Air temperature sensor~~

~~The measuring points A to D and M are in a plane parallel to and at a distance of 10 cm from the MATTRESS.~~

~~Figure 201.101 – Positioning of air temperature sensors~~



~~Figure 201.102 – Variation of INCUBATOR TEMPERATURE~~

201.3.212
STEADY TEMPERATURE CONDITION
condition reached when the INCUBATOR TEMPERATURE does not vary by more than 1 °C over a period of 1 h ~~(see Figure 201.102)~~

SEE Figure 201.101

201.4 General requirements

Clause 4 of the general standard applies, except as follows:

201.4.1 Conditions for application to ME EQUIPMENT or ME SYSTEMS

Addition:

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

For INFANT INCUBATORS which combine alternative heat sources, for instance INFANT INCUBATORS with integrated radiant warmers, devices supplying heat via BLANKETS, PADS or MATTRESSES, etc., the safety requirements of the particular standards for these alternative heat sources, if any, shall be met. The safety requirements of this particular standard shall not be altered by such additional heat sources specified by the MANUFACTURER, details of which are provided in the instruction for use.

Compliance is checked by the tests of Clause 201.11 and 201.15.4.2.1 of the relevant particular standards (e.g. IEC 60601-2-21:2020 or ~~IEC 80601-2-35~~ IEC 60601-2-35:2020).

201.4.3 * ESSENTIAL PERFORMANCE

Addition:

201.4.3.101 ESSENTIAL PERFORMANCE of INFANT INCUBATORS

ESSENTIAL PERFORMANCE requirements are found in the subclauses listed in Table 201.101.

Table 201.101 – Additional ESSENTIAL PERFORMANCE requirements

Requirement	Subclause
ESSENTIAL PERFORMANCE requirement 1	201.12.1.104 or generation of a visual and audible alarm in compliance with 201.15.4.2.1 ee)
ESSENTIAL PERFORMANCE requirement 2	201.12.1.106 or generation of a visual and audible alarm in compliance with 201.15.4.2.1 dd)

201.5 General requirements for testing ME EQUIPMENT

Clause 5 of the general standard applies, except as follows:

201.5.3 ~~*~~ Ambient temperature, humidity, atmospheric pressure

Replacement of item a):

a) * After the ME EQUIPMENT to be tested has been set up for NORMAL USE (according to 5.7), the ME EQUIPMENT shall comply with the requirements of this document when operating within the following conditions:
   - ambient temperature between +20 °C and +30 °C;
   - ambient air velocity less than 0,3 m/s.

Addition:

If not otherwise specified in this particular standard, all tests shall be carried out at an ambient temperature within the range of 21 °C to 26 °C.

201.5.4 Other conditions

Additional item to the existing list:

aa) If not otherwise specified, the CONTROL TEMPERATURE shall be 36 °C ± 1 °C and shall always exceed the ambient temperature by at least 3 °C.

201.6 Classification of ME EQUIPMENT and ME SYSTEMS

Clause 6 of the general standard applies.

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

201.7 ME EQUIPMENT identification, marking and documents

Clause 7 of the general standard applies, except as follows:

201.7.2 Marking on the outside of ME EQUIPMENT or ME EQUIPMENT parts
(see also Table C.1 of the general standard)

Additional subclauses:

201.7.2.101 * Oxygen monitor

An INFANT INCUBATOR not equipped with an integral oxygen monitor and which provides means for oxygen administration shall be marked in a prominent position with a text which states: "Use an oxygen monitor when oxygen is administered".

NOTE See also 7.5 of the general standard.

201.7.2.102 Heater surface temperature

If a heater is accessible without the use of a TOOL, a notice sign (see 7.5 of the general standard) or marking shall be displayed adjacent to the heater giving warning of high surface temperature.

~~**201.7.4 Markings of controls and instruments** (see also Table C.3 of the general standard)~~

201.7.4.2 * Control devices

Addition:

Temperature controls shall be clearly marked with temperature settings on or adjacent to the control. The markings shall be provided at intervals of not greater than 0,5 °C for AIR CONTROLLED INCUBATORS and not greater than 0,25 °C for BABY CONTROLLED INCUBATORS.

Marking of the maximum and the minimum values of controls and indicators shall be such that no confusion can arise with regard to the position of the control or the indicated values.

201.7.9.2.2 ~~*~~ Warning and safety notices

Addition:

The instructions for use shall ~~include~~ contain the following additional items.

~~*~~a) * A statement that an INFANT INCUBATOR should be used only by appropriately trained personnel and under the direction of qualified medical personnel familiar with currently known RISKS and benefits of INFANT INCUBATOR use.

~~*~~b) * A warning that direct sunlight or other radiant heat sources can cause an increase in INCUBATOR TEMPERATURE to dangerous levels.

~~*~~c) * A statement that the use of oxygen increases the danger of fire and that auxiliary equipment producing sparks shall not be placed in the INFANT INCUBATOR.

~~*~~d) * A warning that even small quantities of flammable agents, such as ether and alcohol, left in the INFANT INCUBATOR can cause fire in connection with oxygen.

~~*~~e) * A statement of the maximum allowed weight of additional equipment which might be placed on shelves connected to the INFANT INCUBATOR.

f) For an INFANT INCUBATOR having a TYPE B APPLIED PARTS where the INFANT may not be isolated from earth, a warning that particular care ~~must~~ shall be taken to ensure that additional equipment connected to the INFANT is electrically safe.

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

g) A warning stating that administration of oxygen may increase the noise level for the INFANT within the INFANT INCUBATOR.

h) Explanation of the operation of supplementary oxygen equipment supplied for use with the INFANT INCUBATOR or as specified in the ACCOMPANYING DOCUMENTS.

i) A statement that an oxygen analyzer shall be used when oxygen is delivered to the INFANT.

j) Details of any specified combinations of ME EQUIPMENT (see 201.4.1).

~~*~~k) * A warning against the use of the SKIN TEMPERATURE SENSOR as a rectal temperature sensor, if such a warning is applicable.

l) * A statement that the INFANT INCUBATOR cannot differentiate between an increase in core temperature with a cold skin (fever) and a low core and SKIN TEMPERATURE (hypothermia), and a recommendation to monitor the temperature of the PATIENT.

201.7.9.2.8 * Start-up PROCEDURE

Addition:

The instructions for use shall additionally contain a specification of the warm-up time of the INFANT INCUBATOR measured as specified in 201.12.1.107.

201.7.9.2.9 ~~*~~ Operating instructions

Addition:

The instructions for use shall contain the following additional items:

a) * a recommendation of the position and method of use of the SKIN TEMPERATURE SENSOR;

b) information on how and when to verify the functionality of the ALARM SYSTEM;

c) * information about the range of CONTROL TEMPERATURE and relative humidity of the INFANT INCUBATOR; if the INFANT INCUBATOR is not supplied with means for control of the degree of humidity, this shall be stated in the instructions for use;

d) * a statement of the maximum allowed weight of additional equipment which might be placed on shelves connected to the INFANT INCUBATOR.

201.7.9.3 Technical description (see also Table C.6 of the general standard)

201.7.9.3.1 General

Additional item to the first paragraph:

~~– the MANUFACTURER shall specify in the ACCOMPANYING DOCUMENTS the maximum CO_2 concentration (see subclause 201.12.4.2.101)~~

– the maximum CO_2 concentration (see 201.12.4.2.101).

201.8 Protection against electrical HAZARDS from ME EQUIPMENT

Clause 8 of the general standard applies.

201.9 Protection against MECHANICAL HAZARDS of ME EQUIPMENT and ME SYSTEMS

Clause 9 of the general standard applies, except as follows:

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

201.9.2 MECHANICAL HAZARDS associated with moving parts

201.9.2.1 General

Addition:

This requirement is not applicable to an air circulating fan if it is accessible only when no INFANT is present in the INFANT INCUBATOR and appropriate ME EQUIPMENT parts are removed for cleaning.

201.9.6.2 Acoustic energy

201.9.6.2.1 Audible acoustic energy

Additional subclauses:

201.9.6.2.1.101 * Sound level within the COMPARTMENT

In NORMAL USE, the sound level within the COMPARTMENT shall not exceed a sound pressure level of 60 dB(A) except as specified in 201.9.6.2.1.103.

Compliance is checked by the following test:

With the microphone of a sound level meter complying with the requirements of IEC 61672-1 [5] positioned 100 mm to 150 mm above the centre of the INFANT tray, the measured sound level shall not exceed the specified values. For this test, the INFANT INCUBATOR shall be operated at a CONTROL TEMPERATURE of 36 °C and at a maximum humidity. The background sound level measured inside the COMPARTMENT shall be at least 10 dB below that which is measured during the test.

201.9.6.2.1.102 * Audible alarm sound level

Audible ALARM SIGNALS shall have a sound level of at least 65 dB(A) at a distance of 3 m perpendicular to the front of the control unit in a reflecting room. The auditory alarm may be adjusted by the OPERATOR to a minimum lower level of 50 dB(A). If the frequency of the auditory alarms is adjustable by the OPERATOR, these requirements shall apply to all the individual selectable frequencies.

Compliance is checked by inspection and measurement of the audible alarm level using a sound level meter, as required in subclause 201.9.6.2.1.101 of this particular standard, placed 1,5 m above the floor and 3 m from the control unit. For this test, the INFANT INCUBATOR shall be operated at a CONTROL TEMPERATURE of 36 °C and at a maximum humidity. The background sound level measured shall be at least 10 dB(A) below that which is measured during the test.

201.9.6.2.1.103 * Audible alarms sound level within COMPARTMENT

When any INFANT INCUBATOR alarm is sounding, the sound level in the COMPARTMENT shall not exceed 80 dB(A). If the frequency of the auditory alarms is adjustable by the OPERATOR, this shall apply to all the individual selectable frequencies.

Compliance is checked by the following test:

The alarm shall be actuated and the measurement shall be carried out as described in 201.9.6.2.1.101.

Documents

Full document details: IEC 60601-2-19 2020 RLV

201.9.8 MECHANICAL HAZARDS associated with support systems

201.9.8.3 Strength of PATIENT or OPERATOR support or suspension systems

201.9.8.3.1 General

Amendment:

The normal load for an INFANT is reduced to 10 kg.

Additional subclauses:

201.9.8.3.101 * Barriers

The INFANT shall be safely retained within the COMPARTMENT by barriers such as walls or side panels. Barriers intended to be opened or removed to allow access to the INFANT, such as doors, ports etc., shall close so as not to open under the test conditions specified below. It shall not be possible for barriers to be insecurely closed or latched whilst appearing to be engaged. The mechanical integrity of the INFANT INCUBATOR shall be maintained under the following test conditions.

Compliance is checked by inspection and by the following test:

With all access port doors deliberately made as insecure as possible, without the use of a TOOL, whilst still appearing to be engaged, a horizontal force shall be applied to the centre of the access port door. The force shall be increased gradually from zero to 20 N in an interval of 5 s to 10 s and shall be held at maximum for 5 s.

201.9.8.3.102 MATTRESS tray

If the MATTRESS tray can be extended outside the enclosure, it shall be restrained to ensure that the tray remains attached to the INFANT INCUBATOR, is supported and does not tip under the weight of the INFANT.

Compliance is checked by the following test:

A gradually increasing downward force is applied to the middle of the outside edge of the MATTRESS tray whilst in the fully extended position. The force is increased over 5 s to 10 s intervals until it equals 100 N and ~~is to~~ shall be maintained for a period of 1 min. The tray shall not incline by more than 5° to the horizontal axis of the INFANT INCUBATOR and there shall be no visible evidence of damage to the supporting structures.

Additional subclause:

201.9.8.101 Supports and mounting brackets for ACCESSORIES

Supports and mounting brackets for accessories shall be suitable and of adequate strength for their purpose.

Compliance is checked by inspection and by the following test:

A gradually increasing force is applied so as to act vertically through the centre of the supports and mounting brackets, for example an ACCESSORY shelf in the extended position with a MANUFACTURER's recommended load. The force is increased from zero in a 5 s to 10 s interval, until it equals three times the recommended load and is sustained for a period of 1 min. There shall be no evidence of damage to the items under test.

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

201.10 Protection against unwanted and excessive radiation HAZARDS

Clause 10 of the general standard applies.

201.11 Protection against excessive temperatures and other HAZARDS

Clause 11 of the general standard applies, except as follows:

201.11.1 Excessive temperature in ME EQUIPMENT

201.11.1.2.2 APPLIED PARTS not intended to supply heat to a PATIENT

Replacement:

The temperature of the surfaces intended to be in contact with a PATIENT shall not exceed 40 °C. The temperature of other surfaces accessible to the PATIENT shall not exceed 40°C for metal surfaces and 43 °C for other materials.

These requirements apply in NORMAL CONDITIONS and SINGLE FAULT CONDITIONS including:

– failure of the air circulation;
– failure of a THERMOSTAT;
– disconnection of the SKIN TEMPERATURE SENSOR.

Compliance is checked by the following test:

The maximum temperature of surfaces intended to be in contact with and surfaces accessible to the INFANT shall be measured according to 11.1.2 of the general standard and include test conditions as described in the compliance test of 201.12.3.101 and 201.15.4.2.1 of this particular standard.

201.11.2 * Fire prevention

Subclause 11.2 of the general standard applies.

201.11.6.2 * Overflow in ME EQUIPMENT

Addition:

If a water reservoir is provided as an integral part of the INFANT INCUBATOR, it shall have a water level indicator with "max." and "min." markings if the level of the water in the tank cannot be seen. The tank shall be so designed that it can be drained without tilting the INFANT INCUBATOR.

Compliance is checked by inspection.

201.11.6.3 Spillage on ME EQUIPMENT and ME SYSTEMS

Replacement:

INFANT INCUBATORS shall be so constructed that spillage does not wet parts which if wetted might cause a safety HAZARD.

Such spillage is considered a SINGLE FAULT CONDITION.

Compliance is checked by the following test:

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

The ME EQUIPMENT shall be positioned as for NORMAL USE with the canopy in the normal position; 200 ml of water is poured on any point of the top surface of the ME EQUIPMENT. After this test, the ME EQUIPMENT shall comply with the requirements of this document.

201.11.6.6 * Cleaning and disinfection of ME EQUIPMENT and ME SYSTEMS

Addition:

A humidifier, if provided, shall be designed to permit the application of PROCEDURES that effect microbiological decontamination between uses.

201.11.8 Interruption of the power supply / SUPPLY MAINS to ME EQUIPMENT

Addition:

The ME EQUIPMENT shall be so designed that an interruption and a restoration of the power supply of up to 10 min does not change the CONTROL TEMPERATURE or other preset values.

Compliance is checked by switching the SUPPLY MAINS off and then switching on and inspecting the ME EQUIPMENT.

201.12 Accuracy of controls and instruments and protection against hazardous outputs

Clause 12 of the general standard applies, except as follows:

201.12.1 Accuracy of controls and instruments

Addition:

201.12.1.101 * Stability of INCUBATOR TEMPERATURE

During STEADY TEMPERATURE CONDITION, the INCUBATOR TEMPERATURE shall not differ from the AVERAGE INCUBATOR TEMPERATURE by more than 0,5 °C.

Compliance is checked by measurement at CONTROL TEMPERATURES of 32 °C and 36 °C over a period of at least 1 h.

201.12.1.102 * Uniformity of INCUBATOR TEMPERATURE

With an INFANT INCUBATOR working as an AIR CONTROLLED INCUBATOR and the CONTROL TEMPERATURE set at any temperature within its range, the AVERAGE TEMPERATURE in each of the points A, B, C, and D as specified in the test instruction shall not differ from the AVERAGE INCUBATOR TEMPERATURE by more than 0,8 °C in NORMAL USE. In any position of the tilted MATTRESS, it shall not differ by more than 1 °C.

Compliance is checked by the following test:

Calibrated temperature sensors shall be placed at five points in a plane parallel to and 10 cm above the MATTRESS surface. Point M shall be a point 10 cm above the centre of the MATTRESS (see Figure 201.~~101~~102, point M). The other points shall be the centres of the four areas formed by lines, which divide both the width and the length in two parts (see Figure 201.~~101~~102, points A to D). The AVERAGE TEMPERATURE at each of these five points shall be measured at CONTROL TEMPERATURES of 32 °C and 36 °C.

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

The difference between the AVERAGE INCUBATOR TEMPERATURE (point M) and the measured values at points A, B, C, and D shall be compared as specified. The test shall be undertaken with the INFANT INCUBATOR MATTRESS tray horizontal and at the two extremes of its tilt angle.

201.12.1.103 * Accuracy of SKIN TEMPERATURE SENSOR

The accuracy of the SKIN TEMPERATURE SENSOR for measuring SKIN TEMPERATURE shall be within ±0,3 °C.

Compliance is checked by the following test:

The SKIN TEMPERATURE SENSOR shall be immersed in a water bath which has the capability of controlling the temperature of the water such that it fluctuates by less than ±0,1 °C around its controlled value. The water bath temperature shall be at a nominal 36 °C. A standard thermometer shall be positioned with its temperature sensitive element adjacent to the SKIN TEMPERATURE SENSOR. The displayed SKIN TEMPERATURE shall not differ from the water bath temperature, measured within an uncertainty not greater than 0,05 °C, by more than 0,3 °C.

201.12.1.104 * Accuracy between SKIN TEMPERATURE and CONTROL TEMPERATURE

With an INFANT INCUBATOR working in the BABY CONTROLLED INCUBATOR mode with horizontal MATTRESS orientation, the temperature as measured by the SKIN TEMPERATURE SENSOR shall not differ from the CONTROL TEMPERATURE by more than 0,7 °C in STEADY TEMPERATURE CONDITION.

Compliance is checked by the following test:

The SKIN TEMPERATURE SENSOR shall be freely suspended 10 cm above the centre of the MATTRESS surface. The SKIN TEMPERATURE shall be measured at CONTROL TEMPERATURES of 36 °C.

If it can be demonstrated that an alternative test method is more relevant for this test, the MANUFACTURER may use that method to verify the performance requirement.

201.12.1.105 * Accuracy of INCUBATOR TEMPERATURE indication

An indication of INCUBATOR TEMPERATURE shall be provided by a means which is independent of any device used for control of the INCUBATOR TEMPERATURE. It shall be exclusively used for indication of INCUBATOR TEMPERATURE and it shall be so located as to be easily read without opening the INFANT INCUBATOR even when working at a maximum humidity setting.

A mercury-in-glass thermometer shall not be used.

The AVERAGE TEMPERATURE device reading shall not differ from the AVERAGE INCUBATOR TEMPERATURE, measured by a standard thermometer, by more than 0,8 °C, less the standard thermometer error. The standard thermometer shall be accurate within ±0,05 °C. It shall have a measuring range of at least 20 °C to 40 °C. If the temperature sensitive component of any device is located at a point where the air temperature consistently differs from the INCUBATOR TEMPERATURE, the device may be specially calibrated with an offset in order to meet the above requirements. However, in this case, full details of the special calibration shall be specified in the ACCOMPANYING DOCUMENTS.

Compliance is checked by inspection and measurement at CONTROL TEMPERATURES of 32 °C and 36 °C.

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

201.12.1.106 * Accuracy of INCUBATOR TEMPERATURE control

With an INFANT INCUBATOR operating as an AIR CONTROLLED INCUBATOR, the AVERAGE INCUBATOR TEMPERATURE shall not differ from the CONTROL TEMPERATURE by more than ±1,5 °C.

Compliance is checked by measuring the AVERAGE INCUBATOR TEMPERATURE at a CONTROL TEMPERATURE of 36 °C and at STEADY TEMPERATURE CONDITION.

201.12.1.107 * Warm-up time

The warm-up time of the ME EQUIPMENT shall not differ by more than 20 % from the warm-up time specified in the instructions for use (see 201.7.9.2.8).

Compliance is checked by the following test:

With the CONTROL TEMPERATURE set to 12 °C above ambient temperature, the supply voltage being equal to the rated voltage, and the ME EQUIPMENT operating as an AIR CONTROLLED INCUBATOR, the INFANT INCUBATOR is switched on, starting from COLD CONDITION. The time for the INCUBATOR TEMPERATURE to rise by 11 °C is measured (see Figure 201.~~102~~101). The humidity control, if fitted, shall be set to its maximum value. The water level of a humidifier water container shall be normal. The water in such a container shall be at ambient temperature.

201.12.1.108 * Overshoot of INCUBATOR TEMPERATURE after adjustment

After adjustment of the CONTROL TEMPERATURE in the manner described in the following test, the overshoot in INCUBATOR TEMPERATURE shall not exceed 2 °C and STEADY TEMPERATURE CONDITION shall be restored within 15 min.

Compliance is checked by the following test:

The INFANT INCUBATOR is operated as an AIR CONTROLLED INCUBATOR at a CONTROL TEMPERATURE of 32 °C until STEADY TEMPERATURE CONDITION is reached. The temperature control is then adjusted to a CONTROL TEMPERATURE of 36 °C. The overshoot of INCUBATOR TEMPERATURE and the time to reach the new STEADY TEMPERATURE CONDITION from the first passage of 36 °C shall be measured.

201.12.1.109 * Accuracy of indication of relative humidity

Any indicated value of relative humidity shall have an accuracy of ±10 % ~~of actual measured value~~ relative humidity.

Compliance is checked by the measurement of the relative humidity with a humidity measuring device at the centre of the enclosure. The CONTROL TEMPERATURE shall be set at a value between 32 °C and 36 °C.

201.12.1.110 * Oxygen control

If an oxygen controller forms an integral part of the INFANT INCUBATOR, then there shall be independent sensors for monitoring and control of O_2.

A visual and auditory alarm shall be given if the displayed oxygen concentration deviates from the control setting level by more than ±5 vol. % O_2.

Compliance is checked by the following test:

Documents
Document Sharing Hub
Full document details: IEC 60601-2-19 2020 RLV

Set the oxygen control to 35 vol. %. When steady condition has been reached, decrease the concentration quickly to less than 29 vol. %. Verify that the alarm activates at a displayed oxygen concentration no less than 30 vol. %.

Restore the oxygen concentration to 35 vol. % O_2. When steady condition has been reached, increase the concentration quickly to more than 41 vol. %. Verify that the alarm activates at a displayed oxygen concentration no more than 40 vol. %.

201.12.1.111 * Air velocity

In NORMAL USE, the air velocity over the MATTRESS shall not exceed 0,35 m/s.

Compliance is checked by measurement at the five points specified in the test specification of 201.12.1.102.

201.12.1.112 * Weighing scale

If a weighing scale is supplied as an integral part of the INFANT INCUBATOR or as an ACCESSORY specifically for use with the INFANT INCUBATOR, the weight displayed value shall not differ from the test weights by more than the MANUFACTURER's specifications in the ACCOMPANYING DOCUMENTS when operating in an INFANT INCUBATOR with horizontal MATTRESS orientation. Each value measured shall remain latched on the weighing scale display at the conclusion of any individual measurement cycle and be retained until discarded by the OPERATOR. If the weighing scale may be exposed to an oxygen-enriched environment in use, it shall comply with the requirements of 6.5 of the general standard.

~~NOTE~~ Device calibration should be able to be both verified and updated by the OPERATOR during usage.

Compliance is checked by the following test:

Test measurements shall be demonstrated using values of 500 g ± 1 g and 2 000 g ± 1 g. Tests shall be conducted in an INFANT INCUBATOR operating as an AIR CONTROLLED INFANT INCUBATOR with an INCUBATOR TEMPERATURE of 36 °C.

The accuracy of measurement test shall be verified with the test loads positioned in locations M and A through D in Figure 201.103.

Full document details: IEC 60601-2-19 2020 RLV

201.12.2 USABILITY of ME EQUIPMENT

Addition:

201.12.2.101 * Indication of SKIN TEMPERATURE

BABY CONTROLLED INCUBATORS shall be equipped with a SKIN TEMPERATURE SENSOR ~~and~~; the temperature measured by the sensor shall be continuously displayed and clearly visible. If, in addition, the display is used to present any other parameter, this shall be obtained only on demand using a momentary action switch. The displayed temperature range shall minimally be 33 °C to 38 °C.

Compliance is checked by inspection.

201.12.2.102 * Indication of the mode of operation

When a BABY CONTROLLED INCUBATOR operates as an AIR CONTROLLED INCUBATOR, there shall be a clear indication of the mode of operation in use.

Compliance is checked by inspection.

201.12.2.103 Temperature control

Each temperature control, if it has a rotary action, shall be so arranged that a clockwise rotation produces an increase in temperature.

Compliance is checked by inspection.

201.12.3 ALARM SYSTEMS

Addition:

201.12.3.101 * Air circulation fan

If the INFANT INCUBATOR is provided with an air circulation fan, an audible alarm, visually identifiable, shall be given and the supply to the heater shall be disconnected before a HAZARDOUS SITUATION is created in the event of:

– failure of the fan to rotate, or
– blocking of the air outlets from the INFANT INCUBATOR COMPARTMENT, and
– when possible, blocking of the air inlet.

In the event of a failure of the fan, the ME EQUIPMENT shall not emit flames, molten metal, or poisonous or ignitable gas, and the parts accessible to the INFANT shall not exceed the temperatures specified in 201.11.1.2.2 of this particular standard.

Compliance is checked by running the INFANT INCUBATOR as an AIR CONTROLLED INCUBATOR until STEADY TEMPERATURE CONDITION is achieved at a CONTROL TEMPERATURE of 34 °C. It shall then be checked that the requirement is met when in turn:

– *the fan is disabled;*
– *the air circulation outlet to the COMPARTMENT enclosure is blocked by a piece of closely woven cloth; where a number of separated air inputs are provided or if protected from inadvertent blockage, the second part of the test is not required;*
– *the air inlet is blocked when applicable.*

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV

201.12.3.102 * Connector to SKIN TEMPERATURE SENSOR

A BABY CONTROLLED INCUBATOR shall be provided with an audible alarm visually identifiable, which sounds in the event of the connector to the SKIN TEMPERATURE SENSOR

– becoming electrically disconnected,
– having open-circuited leads, or
– having short-circuited leads.

The supply to the heater shall be automatically disconnected or the INFANT INCUBATOR shall be automatically switched over to the air control mode with a CONTROL TEMPERATURE of 36 °C ± 0,5 °C or a CONTROL TEMPERATURE set by the OPERATOR.

Compliance is checked by simulating the specified fault conditions and observing the effects.

The MANUFACTURER's recommended sensor shall be connected to the control unit by slowly inserting its plug into the corresponding socket in order to determine if there are any intermediate positions that inhibit an alarm activation.

201.12.3.103 ~~Alarm for~~ Interruption of power supply

Audible alarm and visible indication shall be provided to give warning in the event of interruption of the power supply to the INFANT INCUBATOR.

Compliance is checked by disconnecting the power supply while the INFANT INCUBATOR is switched on.

The audible and visual indication of the failure of power supply shall be provided for a minimum time of 10 min.

201.12.3.104 AUDIO PAUSED of audible alarm

Deliberately silenced audible alarms shall have a maintained visual indication.

Such alarms shall automatically resume their normal function within a time specified by the MANUFACTURER.

The AUDIO PAUSED for an INFANT INCUBATOR warming up from COLD CONDITION may be up to 30 min.

Compliance is verified by functional check and time measurement.

201.12.3.105 Alarm function test

Means shall be provided for the OPERATOR to check the operation of audible and visual alarms. Such means shall be described in the instructions for use.

Compliance is checked by inspection.

201.12.4.2 Indication ~~of parameters~~ relevant to safety

Addition:

201.12.4.2.101 * CO_2 concentration

The MANUFACTURER shall disclose the value of the maximum CO_2 concentration which will occur in the COMPARTMENT under NORMAL CONDITIONS.

AVA Documents Document Sharing Hub

Full document details: IEC 60601-2-19 2020 RLV
