IEEE Standards documents are developed within the Technical Committees of the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Board. Members of the committees serve voluntarily and without compensation. They are not necessarily members of the Institute. The standards developed within IEEE represent a consensus of the broad expertise on the subject within the Institute as well as those activities outside of IEEE which have expressed an interest in participating in the development of the standard.

Use of an IEEE Standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least once every five years for revision or reaffirmation. When a document is more than five years old, and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of all concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason IEEE and the members of its technical committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE Standards Board

Foreword

(This Foreword is not a part of ANSI/IEEE Std 251-1984, IEEE Guide: Test Procedures for Direct-Current Tachometer Generators.)

This guide is a revision of IEEE Std 251-1963, Test Procedures for Direct-Current Tachometer Generators. Particular emphasis has been given to up-dating the units used and to assuring that the references are current.

This standard was prepared by the 251 Working Group of the Single-Phase and Fractional Horsepower Subcommittee of the IEEE Rotating Machinery Committee.

At the time of approval, the working group had the following membership:

Robert J. Owens, *Chairman*

John B. Buckman

Lloyd B. Wilson

Robert M. Vreeland

When the IEEE Standards Board approved this standard on June 10, 1982, it had the following membership:

Irvin N. Howell, Jr, *Chairman*

Irving Kolodny, *Vice Chairman*

Sava I. Sherr, *Secretary*

G. Y. R. Allen
J. J. Archambault
James H. Beall
John T. Boettger
J. V. Bonucchi
Edward Chelotti
Edward J. Cohen

Len S. Corey
Donald C. Fleckenstein
Jay Forster
Kurt Greene
Joseph L. Koepfinger
John E. May

Donald T. Michael*
A. R. Parsons
J. P. Riganati
Robert W. Seelbach
Jay A. Stewart
Clifford O. Swanson
Robert E. Weiler

*Member emeritus
