INTRODUCTION

The purpose of this publication is to provide uniform and acceptable terms for use in the application of solar cells to power systems. The terms should be useful in unifying expressions used in engineering writing and in the preparation of specifications and procurement documents. It is expected that this Standard will be found most useful by persons not expert in the solar cell field as opposed to the scientific use of such terminology. Users of the terms are urged to refer to the IEEE Dictionary for more general definitions.

ACKNOWLEDGMENT

The Institute wishes to acknowledge its indebtedness to those who have so freely given of their time and knowledge and have conducted experimental work on which many of the IEEE publications are based.

This publication was prepared by the Applications Subcommittee of the Aerospace Energy Conversion Committee of the IEEE Aerospace and Electronic Systems Group, whose membership was:

K. A. Ray, *Chairman*
P. Fono
