Foreword

(This Foreword is not a part of IEEE Std 333-1980, IEEE Standard for Electrical Installations on Packaging Machinery and Associated Equipment.)

Packaging is a method of containing, protecting, enveloping, or enhancing an article for distribution from the manufacturer to the consumer. Since packaging is used on all sorts of goods for all groups of people, it is one of the world's largest businesses. In order to accomplish its function, it uses products of the paper, chemical, wood, glass, and can industries.

The term *packaging machine* covers an extremely wide variety of machinery. In an effort to establish a commonality in circuit design, electrical assembly, and types of devices, it seemed logical to prepare a standard for the industry. It is believed that use of this standard will aid materially in the promotion of safety for personnel and equipment and the reduction of fire and accident hazard, as well as the goals of uninterrupted production, long equipment life, and low maintenance cost.

The IEEE will maintain this standard current with the state of technology. Comments on this standard and suggestions for additional material to be included are invited and should be addressed to:

Secretary
IEEE Standards Committee
The Institute of Electrical and Electronics Engineers, Inc
345 East 47 Street
New York, NY 10017

This standard is the result of the efforts of the Packaging Industry Committee which had the following membership at the time of approval.

C. D. Lambert, *Chairman*

C. Wolfe, *Vice Chairman*

Nicholas E. Gatzios, *Secretary*

R. M. Auchter
J. Beal
W. P. Bergeron
C. S. Breeden, Jr
H. Burndt
E. N. Burt
E. Cashwell

S. K. Feingold
P. H. Fisher
